Angie, Personal AI Assistant with Telegram Voice and Text

This project creates a personal AI assistant named Angie that operates through Telegram. Angie can summarize daily emails, look up calendar entries, remind users of upcoming tasks, and retrieve contact information. The assistant can interact with users via both voice and text inputs.

Chat with local LLMs using n8n and Ollama

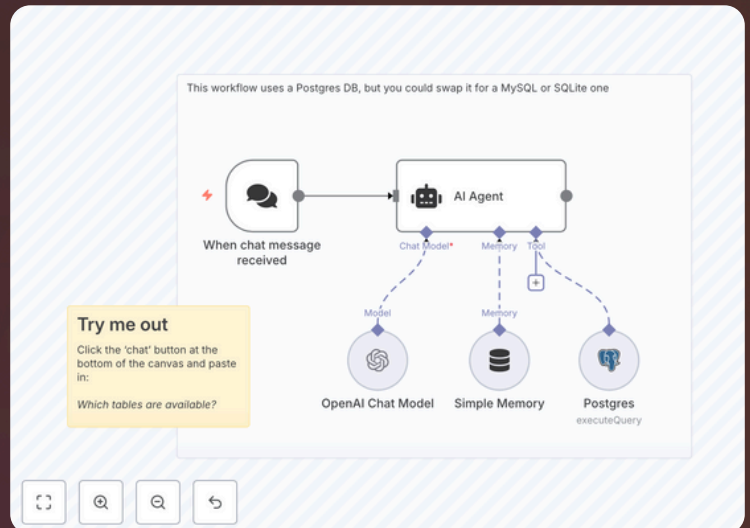

This n8n workflow allows you to seamlessly interact with your self-hosted Large Language Models (LLMs) through a user-friendly chat interface. By connecting to Ollama, a powerful tool for managing local LLMs, you can send prompts and receive AI-generated responses directly within n8n.

Chat with a database using AI

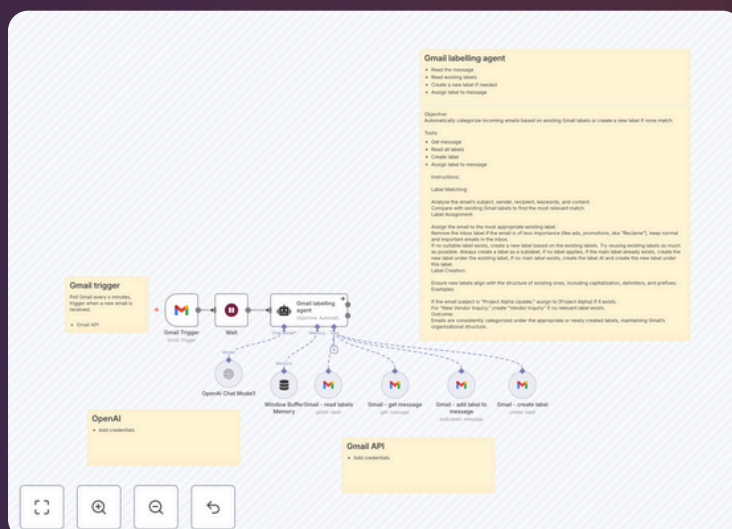

This workflow allows you to ask questions about data stored in a database using AI.

To use it, you'll need an OpenAI API key (although you could also swap in a model from another service).

Supported databases: Postgres, MySQL, SQLite

Basic Automatic Gmail Email Labelling with OpenAI and Gmail API

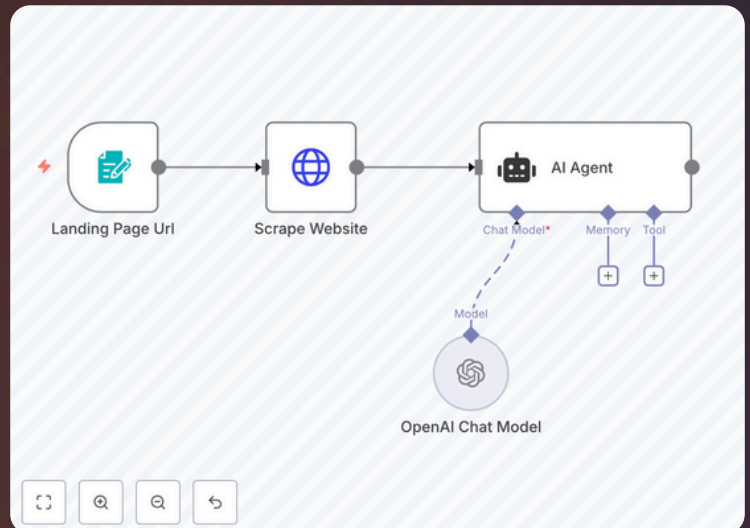

This workflow automates email categorization in Gmail using the Gmail API and OpenAI's language model. It checks for new emails, reads their content, and categorizes them based on existing Gmail labels. If no matching label is found, the workflow creates a new label and assigns it to the email.

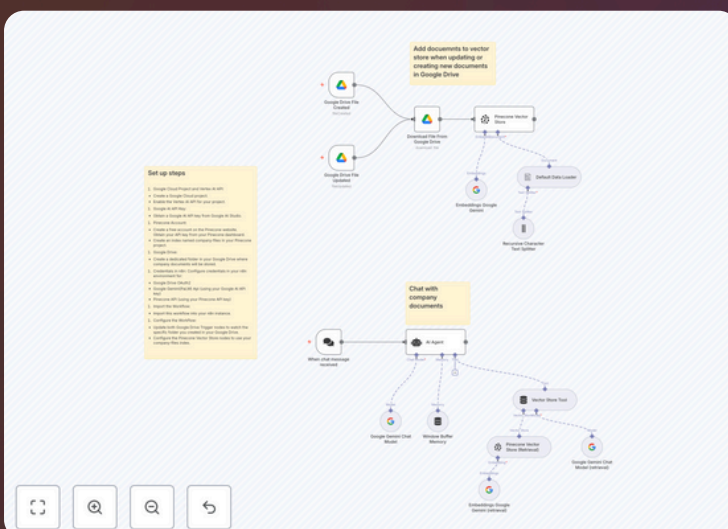

Analyze Landing Page with OpenAI and Get Optimization Tips

You know something is off, but don't know what. What if you could get an instant, expert-level report on exactly what to fix?

This workflow will do an AI Analysis of your landing page, provide a CRO Audit, so you can optimize your landing page.

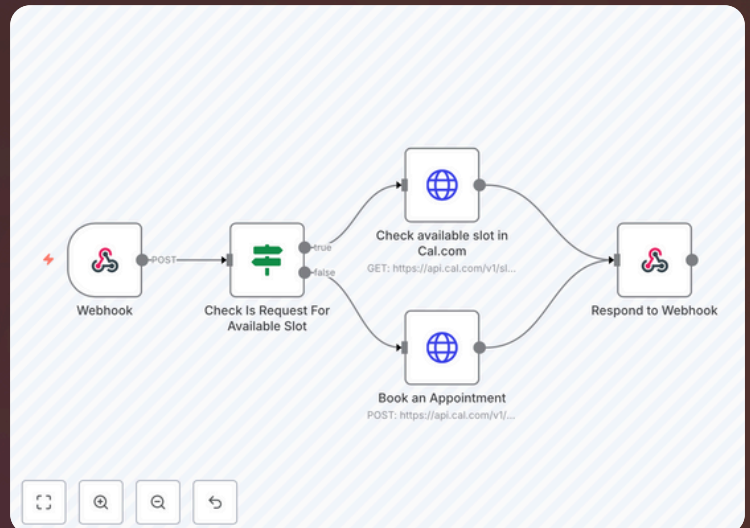

RAG Chatbot for Company Documents using Google Drive and Gemini

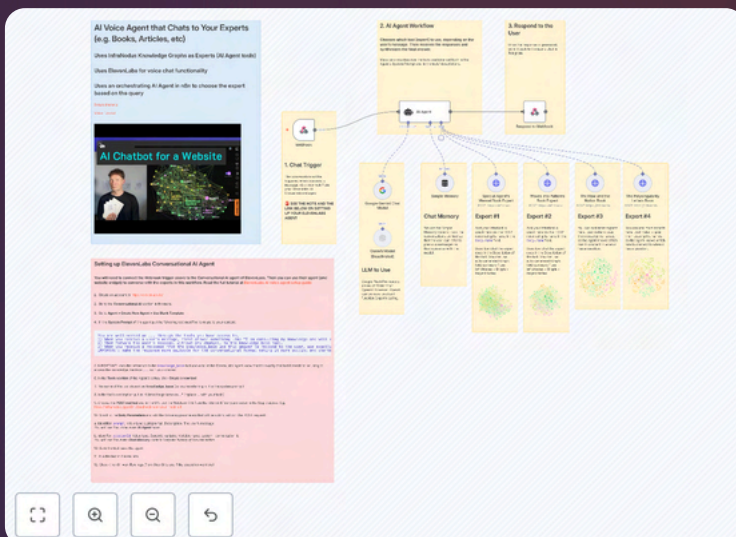

This workflow implements a Retrieval Augmented Generation (RAG) chatbot that answers employee questions based on company documents stored in Google Drive. It automatically indexes new or updated documents in a Pinecone vector database, allowing the chatbot to provide accurate and up-to-date information.

Voice-Based Appointment Booking System with ElevenLabs AI and Cal.com

Tired of the back-and-forth involved in scheduling meetings? This workflow lets you offer a seamless, voice-based appointment booking experience. It automatically checks your [Cal.com](#) availability and either books a meeting or helps the caller choose another time—powered by ElevenLabs for a human-like voice interaction.

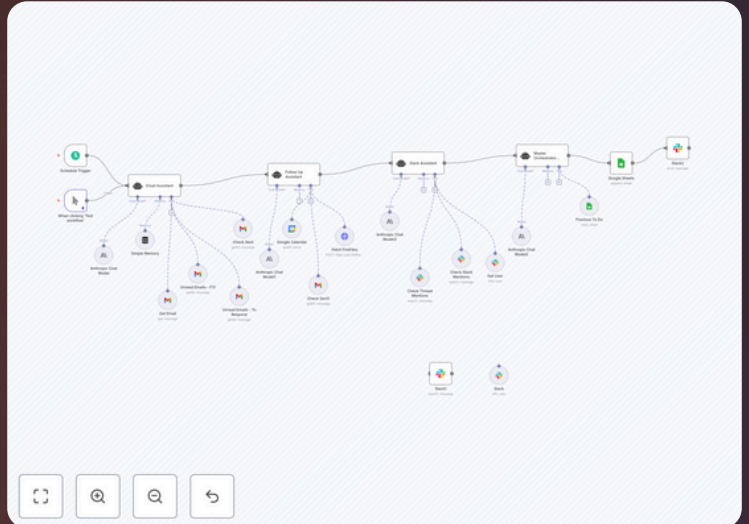

Build a Voice AI Chatbot with ElevenLabs and InfraNodus Knowledge Experts

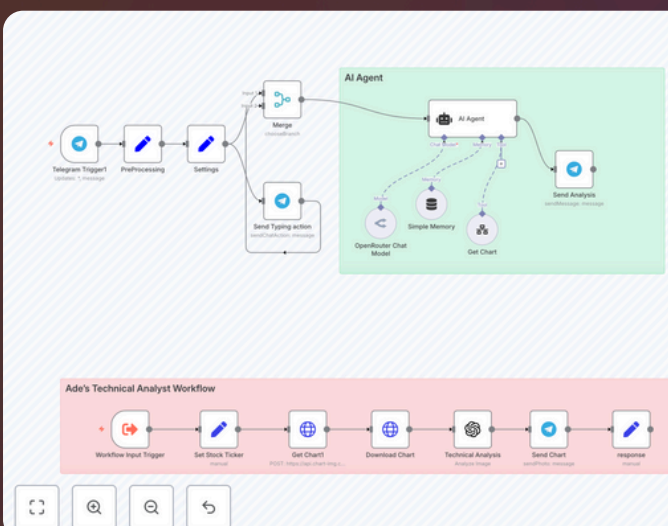

This workflow creates an AI voice chatbot agent that has access to several knowledge bases at the same time (used as "experts"). These knowledge bases are provided using the InfraNodus GraphRAG using the knowledge graphs and providing high-quality responses without the need to set up complex RAG vector store workflows.

AI Personal Assistant

This automation flow is designed to proactively monitor email, calendar, and Slack communications, analyze priorities across all channels, and generate a comprehensive daily briefing with actionable tasks for executive productivity management.

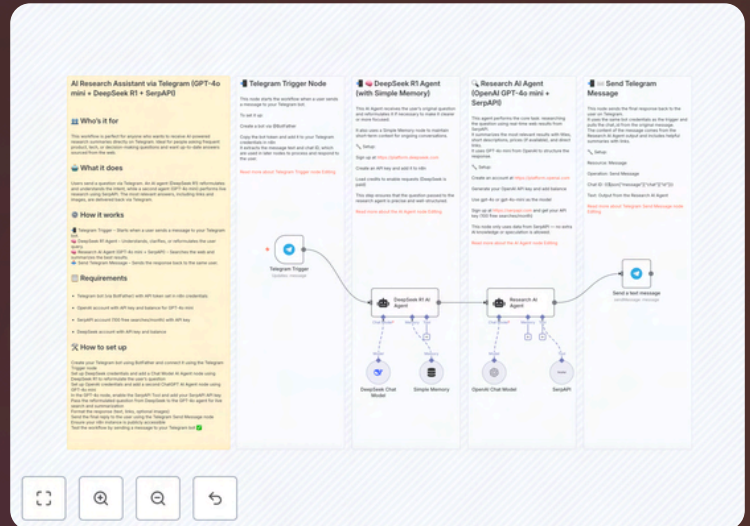

AI-Powered Stock Analysis Assistant with Telegram, Claude & GPT-4O Vision

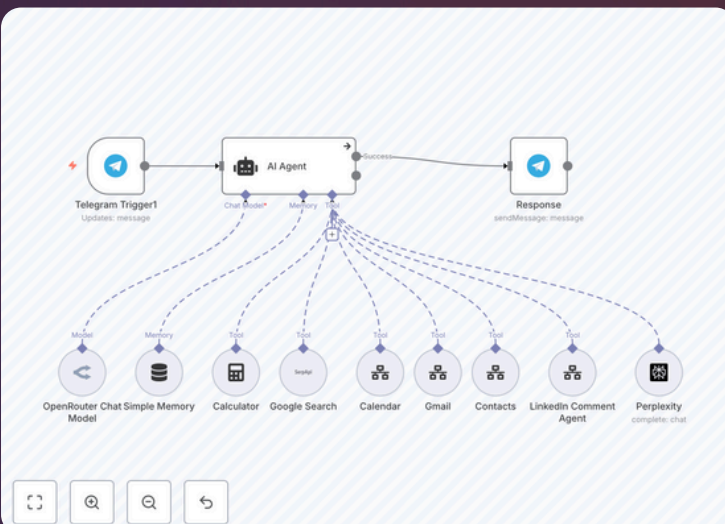

"Ade Technical Analyst" is a dual-workflow AI system combining conversational intelligence with visual chart analysis through Telegram. The system features 11 primary nodes for conversation management and 8 secondary nodes for chart generation and analysis.

AI Research Assistant via Telegram (GPT-4o mini + DeepSeek R1 + SerpAPI)

This workflow is perfect for anyone who wants to receive AI-powered research summaries directly on Telegram. Ideal for people asking frequent product, tech, or decision-making questions and want up-to-date answers sourced from the web.

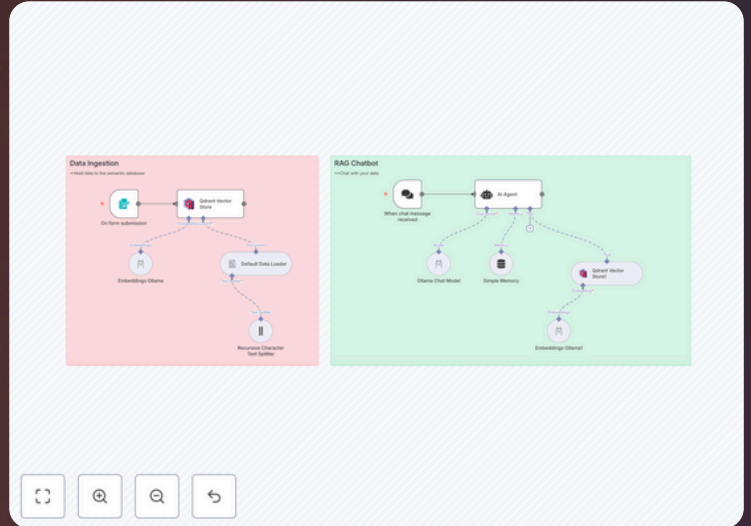

AI Personal Assistant with GPT-4o: Email, Calendar, Search & CRM Integration

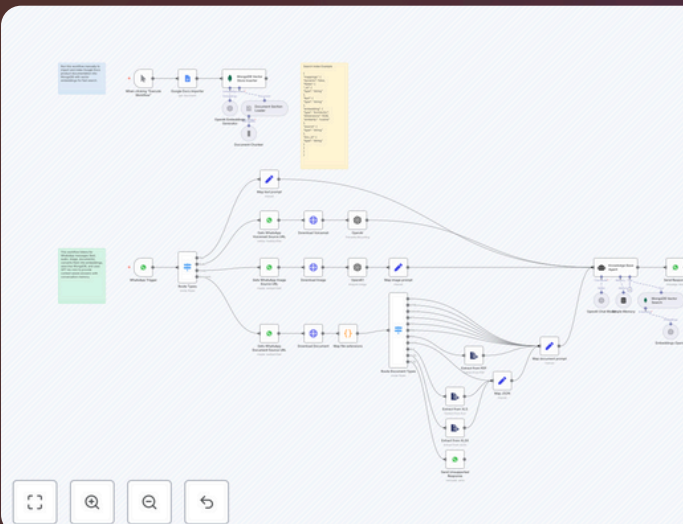

The workflow is triggered by Telegram messages (can be replaced with other triggers). A router node directs requests to the appropriate specialized agent. Agents include: Gmail for email management, Calculator for math operations, Google Search for information retrieval, Calendar for scheduling, Contacts for CRM functions.

Local Chatbot with Retrieval Augmented Generation (RAG)

Build a chatbot that answers based on documents you provide it (Retrieval Augmented Generation). You can upload as many PDF files as you want to the Qdrant database. The chatbot will use its retrieval tool to fetch the chunks and use them to answer questions.

AI-Powered WhatsApp Chatbot for Text, Voice, Images, and PDF with RAG

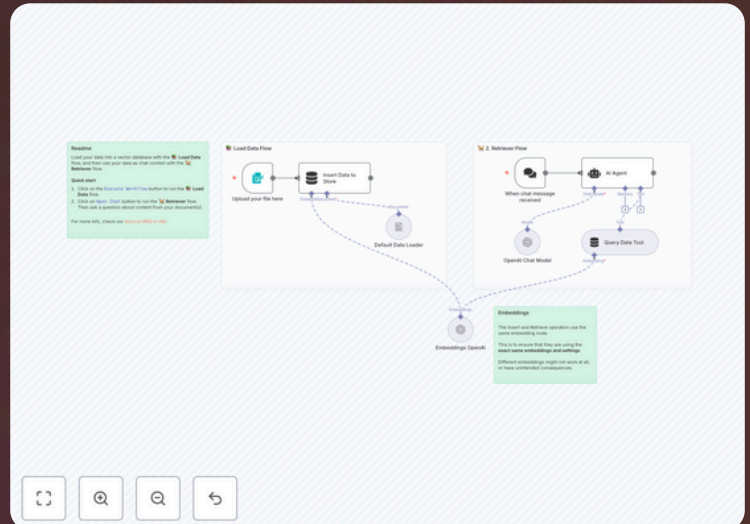

This template is designed for internal support teams, product specialists, and knowledge managers in technology companies who want to automate ingestion of product documentation and enable AI-driven, retrieval-augmented question answering via WhatsApp.

RAG Starter Template using Simple Vector Stores, Form trigger and OpenAI

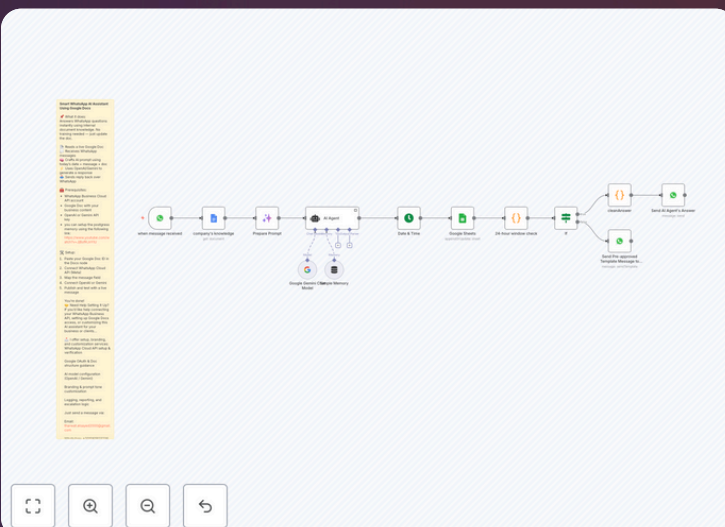

This template is for everyone who wants to start giving knowledge to their Agents through RAG.

Have a PDF with custom knowledge that you want to provide to your agent.

No setup required. Just hit Execute Workflow, upload your knowledge document and then start chatting.

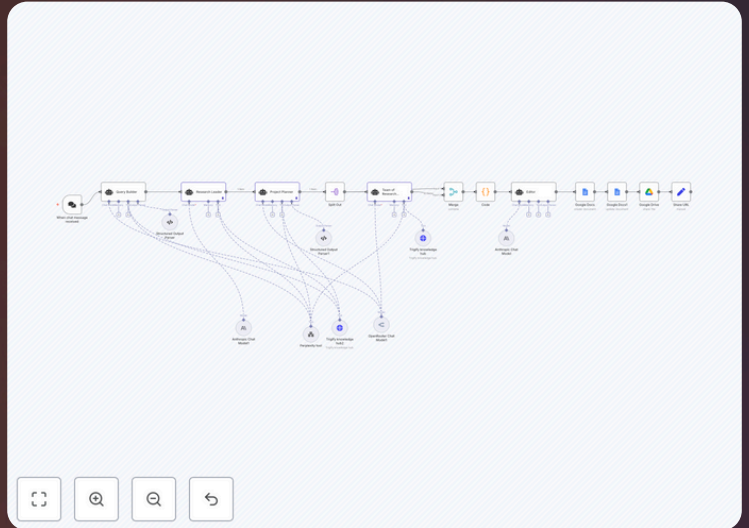

Customer Support WhatsApp Bot with Google Docs Knowledge Base and Gemini AI

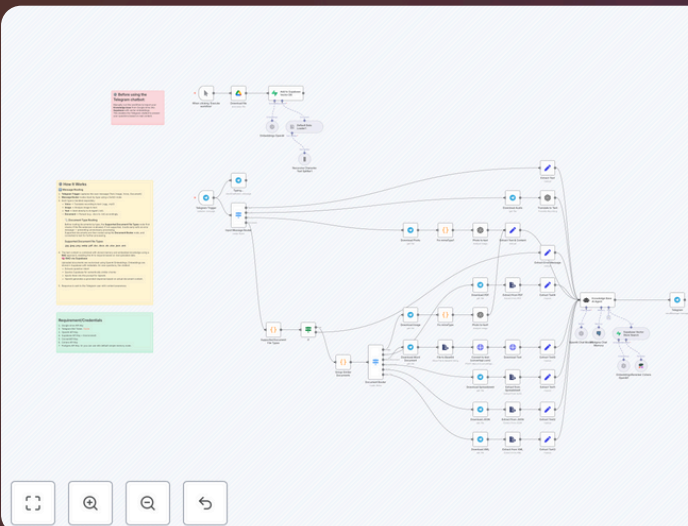

Help customers instantly on WhatsApp using a smart AI assistant that reads your company's internal knowledge from a Google Doc in real time. Built for clubs, restaurants, agencies, or any business where clients ask questions based on a policy, FAQ, or services document.

Deep Research - Sales Lead Magnet Agent

This automation flow is designed to generate comprehensive, research-backed lead magnet articles based on a user-submitted topic, conduct deep research across multiple sources, and automatically create a professional Google Doc ready for LinkedIn sharing.

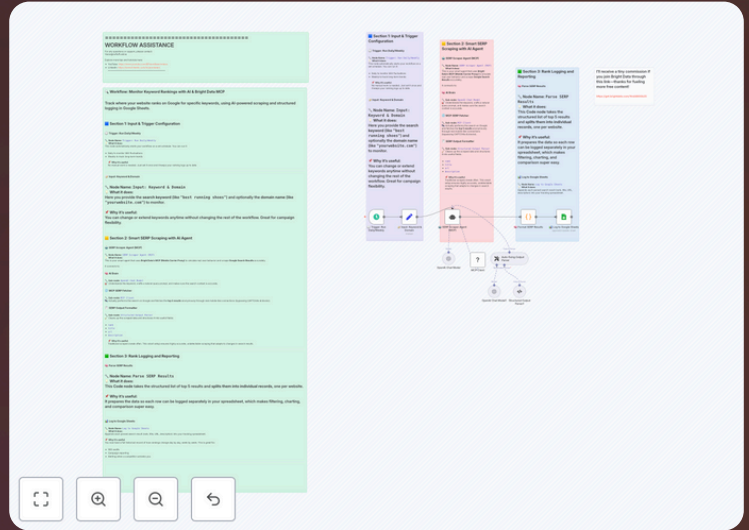

Create a Multi-Modal Telegram Support Bot with GPT-4 and Supabase RAG

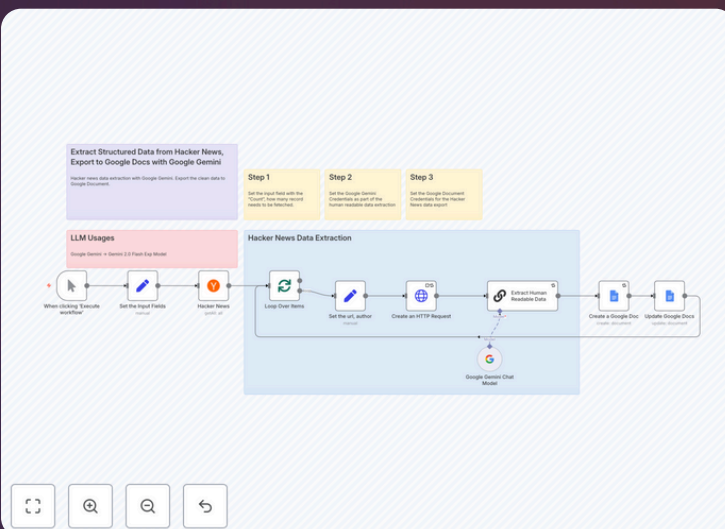

This n8n workflow turns your Telegram bot into a smart, multi-modal AI assistant that accepts text, documents, images, and audio messages, interprets them using OpenAI models, and responds instantly with context-aware answers.

Track SEO Keyword Rankings with Bright Data MCP and GPT-4o AI Analysis

This workflow automatically monitors keyword rankings across search engines to track SEO performance and identify optimization opportunities. It saves you time by eliminating the need to manually check keyword positions and provides comprehensive ranking data for strategic SEO decision making.

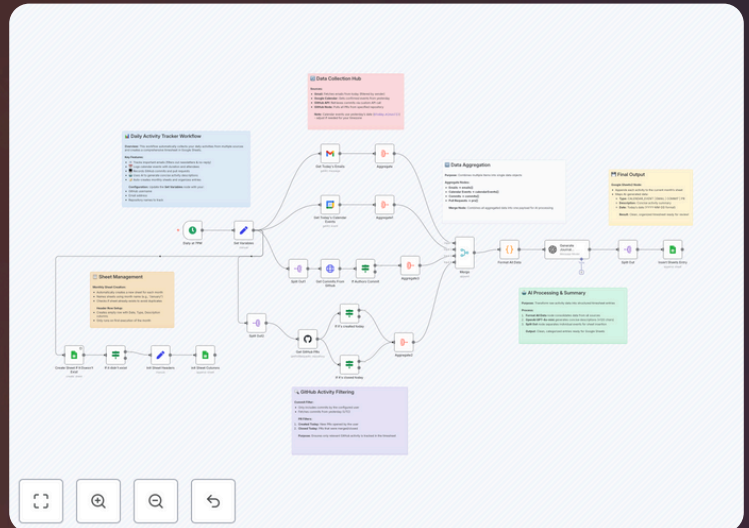

Extract & Transform HackerNews Data to Google Docs using Gemini 2.0 Flash

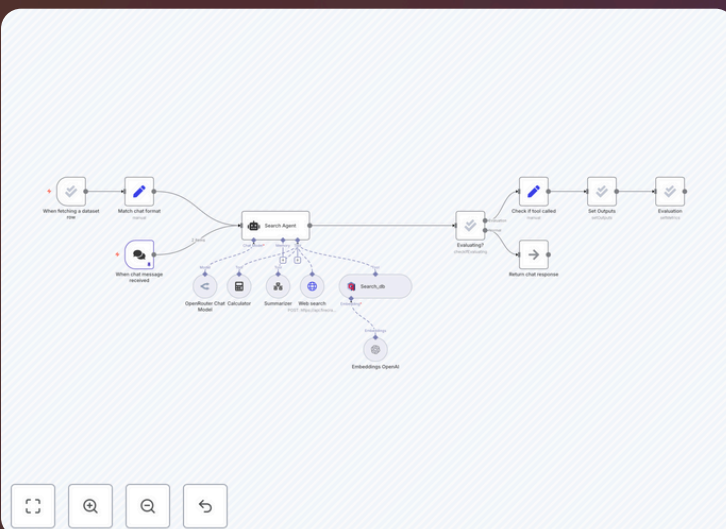

This workflow automates the process of scraping the latest discussions from HackerNews, transforming raw threads into human readable content using Google Gemini, and exporting the final content into a well-formatted Google Doc.

AI Timesheet Generator with Gmail, Calendar & GitHub to Google Sheets

Stop wasting billable hours on manual time-tracking. AutoTimesheet Pro uses AI to collect emails, meetings, and GitHub work, then writes a clean timesheet straight into Google Sheets. Perfect for developers, consultants, agencies, and remote teams.

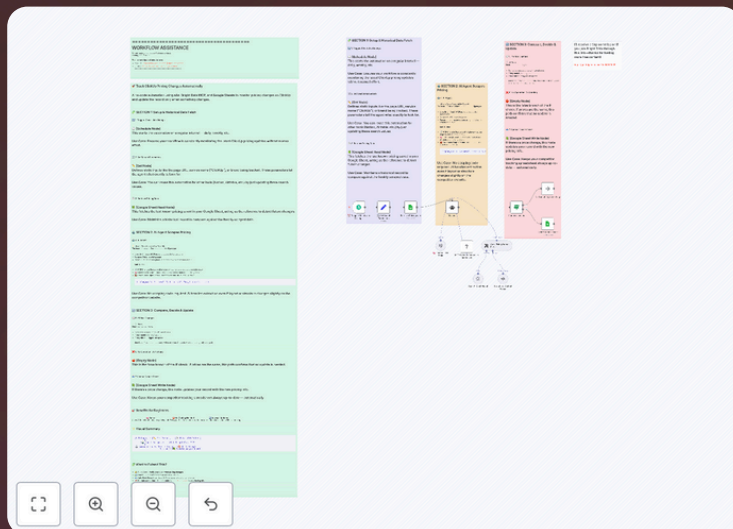

Evaluate tool usage accuracy in multi-agent AI workflows using Evaluation nodes

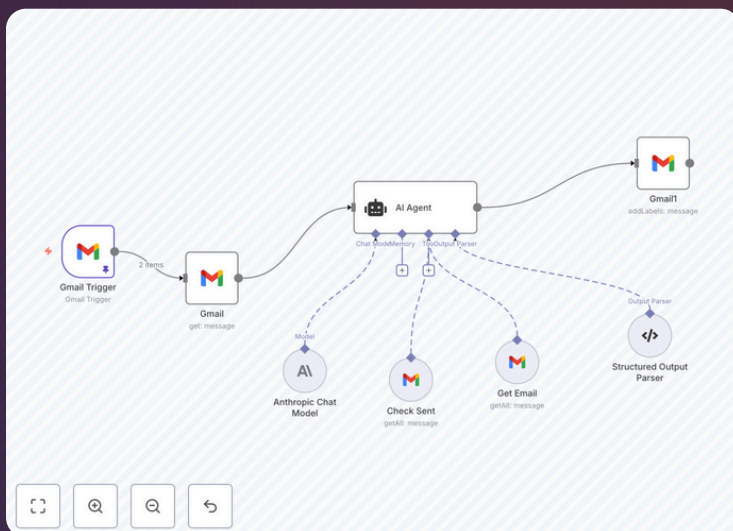

This workflow is ideal for AI developers running multi-agent systems in n8n who need to quantitatively evaluate tool usage behavior. If you're building autonomous agents and want to verify their decisions against ground-truth expectations, this workflow gives you plug-and-play observability.

Automated Competitor Pricing Monitor with Bright Data MCP & OpenAI

This workflow automatically monitors competitor pricing changes and website updates to keep you informed of market movements. It saves you time by eliminating the need to manually check competitor websites and provides alerts only when actual changes occur, preventing information overload.

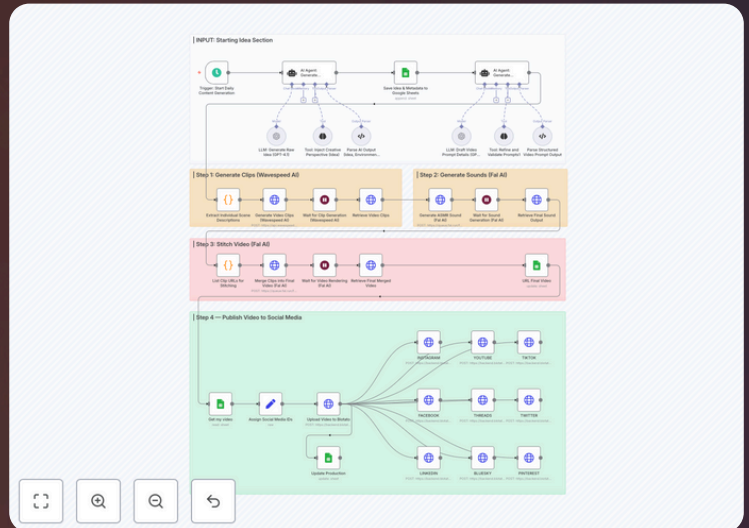

Gmail AI Email Manager

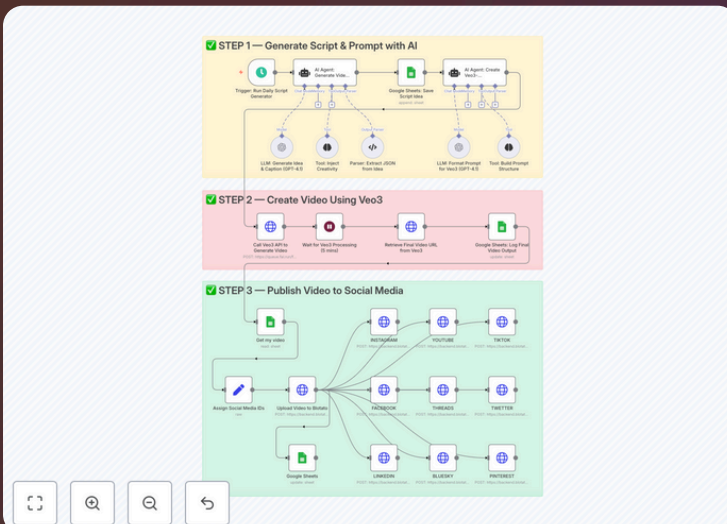

This automation flow is designed to automatically monitor incoming Gmail messages, analyze their content and context using AI, and intelligently classify them with appropriate labels for better email organization and prioritization.

Generate AI Viral Videos with Seedance and Upload to YouTube & Instagram

This template is ideal for creators, content marketers, social media managers, and AI enthusiasts who want to automate the production of short-form, visually captivating videos for platforms like TikTok, YouTube Shorts, and Instagram Reels — all without manual editing or publishing.

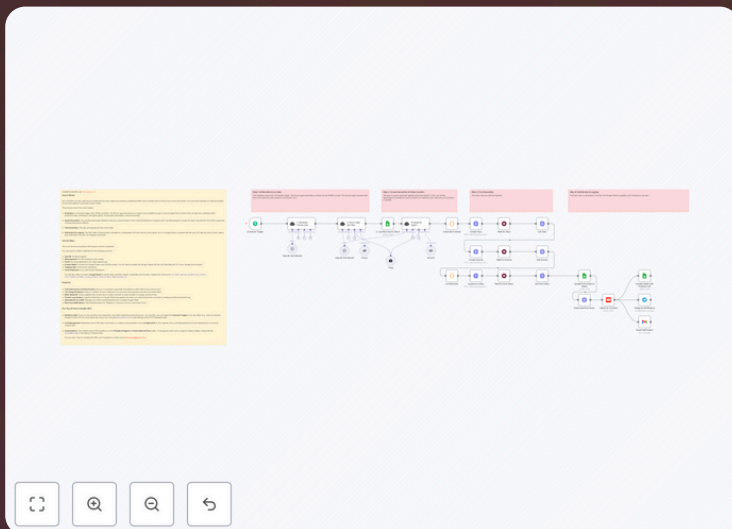

Generate & Auto-post AI Videos to Social Media with Veo3 and Blotato

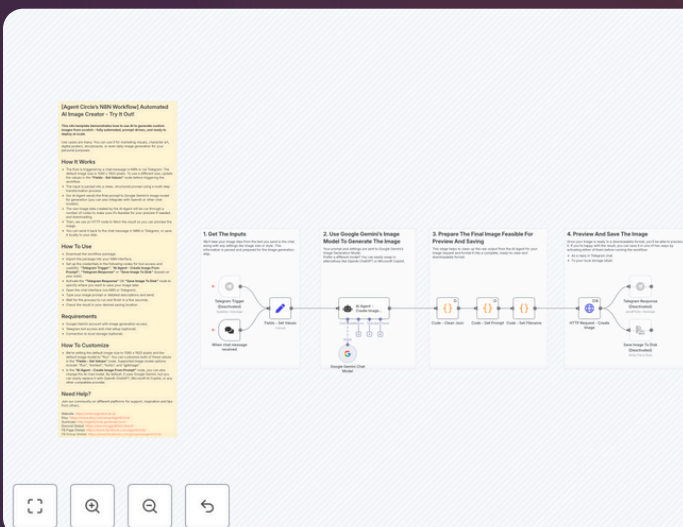

This template is ideal for content creators, social media managers, YouTubers, and digital marketers who want to generate high-quality videos daily using AI and distribute them effortlessly across multiple platforms. It's perfect for anyone who wants to scale short-form content creation without video editing tools.

Create & Upload AI-Generated ASMR YouTube Shorts with Seedance, Fal AI, and GPT-4

This workflow solves the creative bottleneck and time-consuming nature of daily content creation. It fully automates the entire production pipeline, from brainstorming trendy ideas to publishing a finished video, turning your n8n instance into a 24/7 content factory.

Free AI Image Generator - n8n Automation Workflow with Gemini/ChatGPT

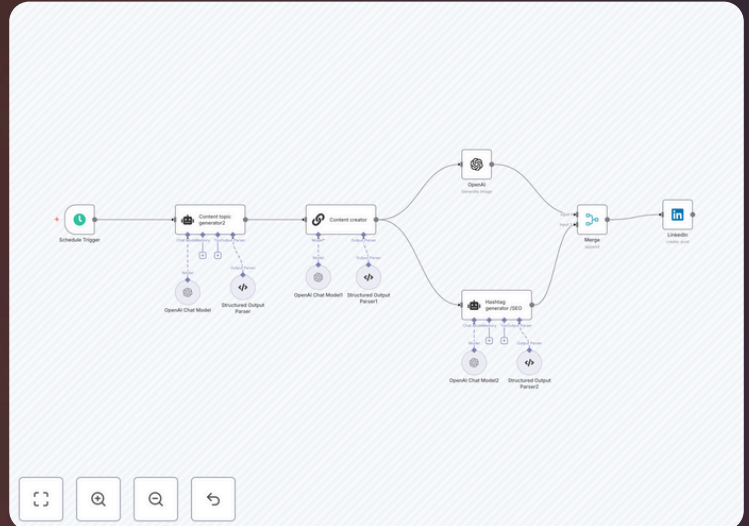

This n8n template demonstrates how to use AI to generate custom images from scratch - fully automated, prompt-driven, and ready to deploy at scale.

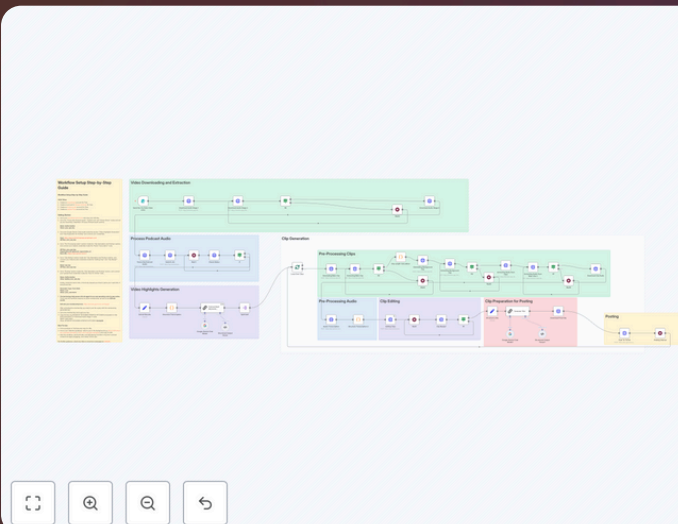

Use cases are many: You can use it for marketing visuals, character art, digital posters, storyboards, or even daily image generation for your personal purposes.

Automated LinkedIn Content Creation with GPT-4 and DALL-E for Scheduled Posts

Automatically generates trending LinkedIn content topics using AI. Researches current industry angles and hooks. Writes posts in your authentic voice using OpenAI. Creates professional images with DALL-E. Posts everything on schedule without manual intervention

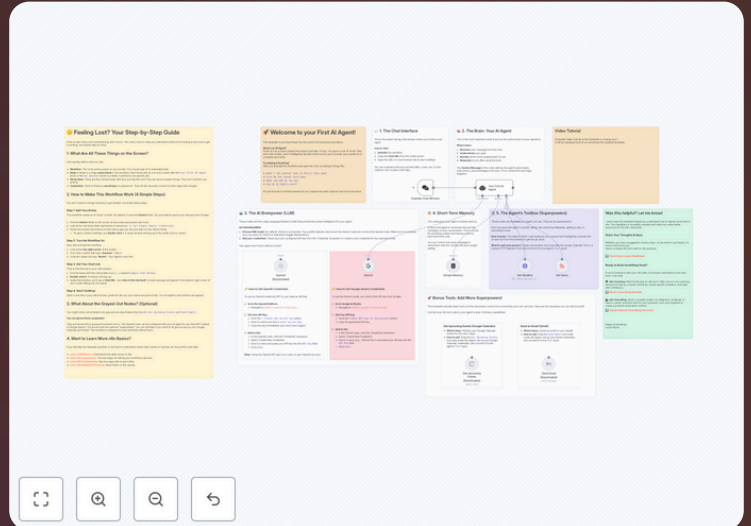

Transform Podcasts into Viral TikTok Clips with Gemini+ Multi-Platform Posting

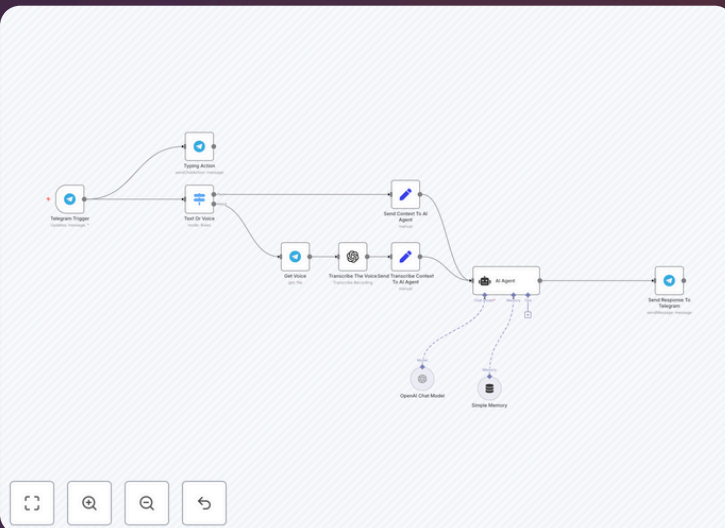

Effortlessly transform long-form podcast content into highly engaging, viral-read clips with this end-to-end automation template. Designed for content creators already monetizing on TikTok/YouTube/Instagram/Twitter and those looking to start earning from the platform, this workflow streamlines the process

Create Your First AI Agent with Weather & Web Scraping (Starter Kit)

This template is your personal launchpad into the world of AI-powered automation. It provides a fully functional, interactive AI chatbot that you can set up in minutes, designed specifically for those new to AI Agents. Think of it as a smart assistant that doesn't just talk—it acts.

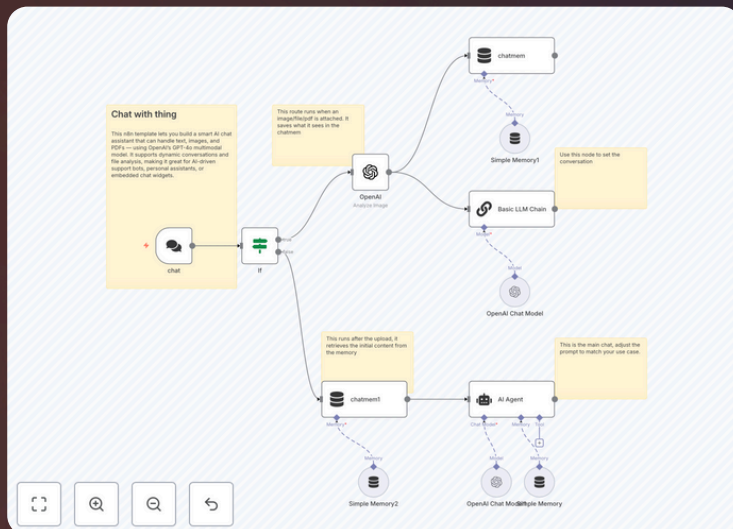

Conversational Telegram Bot with GPT-5/GPT-4o for Text and Voice Messages

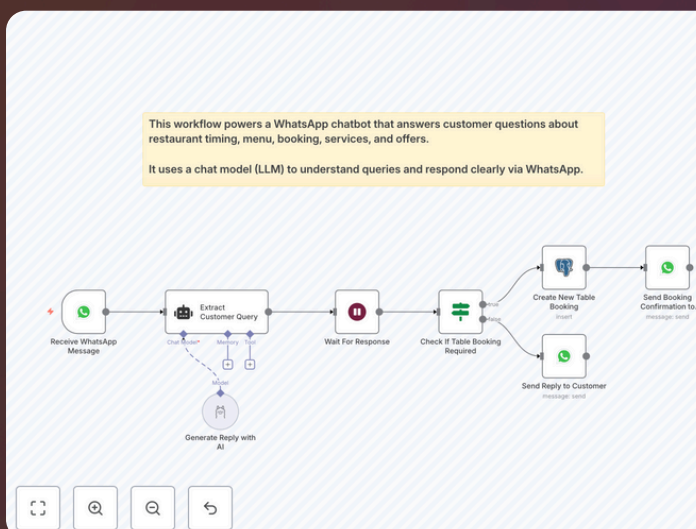

This n8n workflow leverages a Telegram Message Trigger to activate an intelligent AI Agent capable of processing both text and voice messages. When a user sends a message in text or in voice format, the workflow captures and transcribes it (if necessary), then passes it to the AI Agent for understanding and response generation.

Multimodal Chat Assistant with GPT-4o for Text, Images, and PDFs

This n8n template lets you build a smart AI chat assistant that can handle text, images, and PDFs — using OpenAI's GPT-4o multimodal model. It supports dynamic conversations and file analysis, making it great for AI-driven support bots, personal assistants, or embedded chat widgets.

Automate Restaurant Customer Service with WhatsApp and Llama AI Chatbot

An intelligent WhatsApp-based chatbot designed for restaurants to automate customer interactions related to table bookings, menu inquiries, opening hours, services, and offers. Built using the n8n automation platform and powered by an AI language model, this solution streamlines communication, boosts efficiency, and improves customer satisfaction.

Generate Cold Emails & Sales Letters with OpenAI GPT & Google Docs via Chat

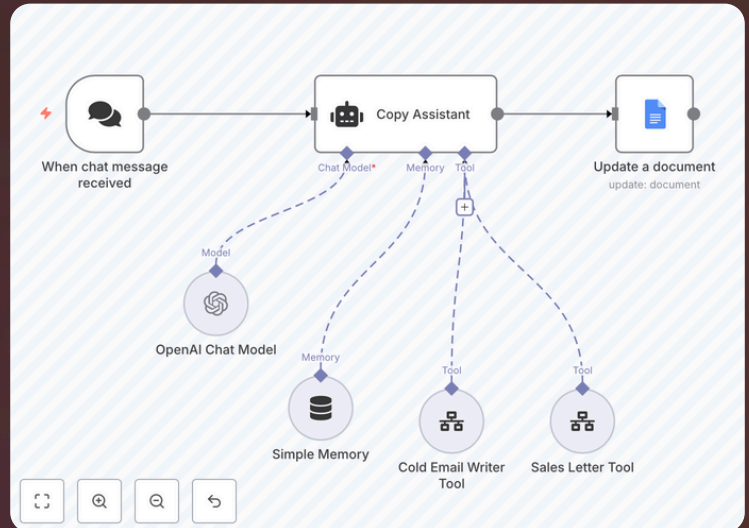

How it works

- Trigger: Listens for an incoming chat message
- Copy Assistant: Feeds the message (plus memory) into an OpenAI Chat Model and exposes two “tools”

Sales Letter Tool*

Tool execution: Depending on the user's intent, the appropriate tool generates the copy

- Save output: Writes the generated email or sales letter into your target document via the Update a document node

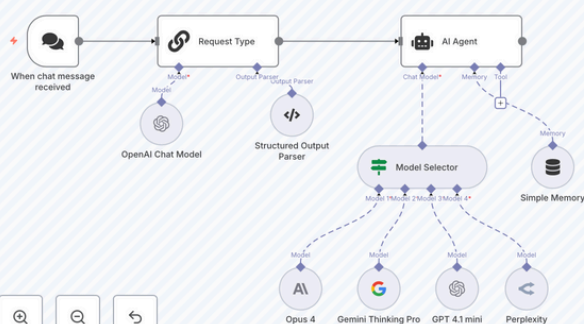

AI Orchestrator: dynamically Selects Models Based on Input Type

AI Orchestrator: dynamically Selects Models Based on Input Type

This workflow is designed to intelligently route user queries to the most suitable large language model (LLM) based on the type of request received in a chat environment. It uses structured classification and model selection to optimize both performance and cost-efficiency in AI-driven conversations.

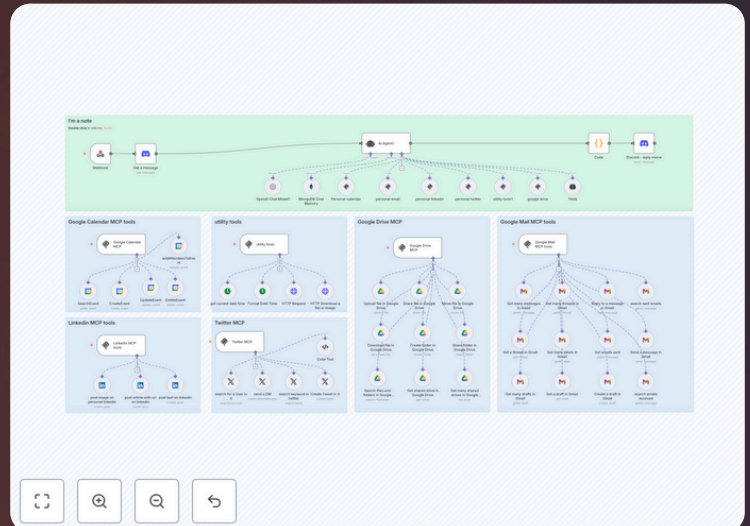

It dynamically routes requests to specialized AI models based on content type, optimizing response quality and efficiency.

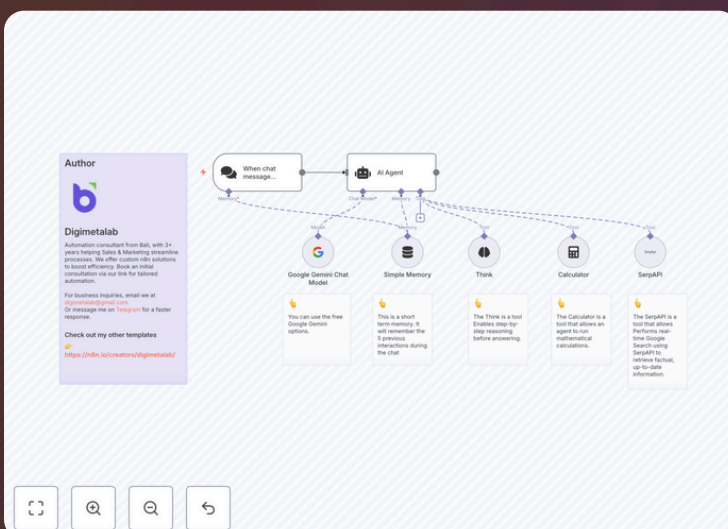

This workflow is designed to intelligently route user queries to the most suitable large language model (LLM) based on the type of request received in a chat environment. It uses structured classification and model selection to optimize both performance and cost-efficiency in AI-driven conversations.

AI-Powered Multi-Platform Assistant with Google Suite, LinkedIn & Twitter

This workflow integrates multiple productivity tools into a single AI-powered assistant using n8n, acting as a centralized control hub to receive and execute tasks across Google Calendar, Gmail, Google Drive, LinkedIn, Twitter, and more.

Build Your First AI Agent – Powered by Google Gemini with Memory

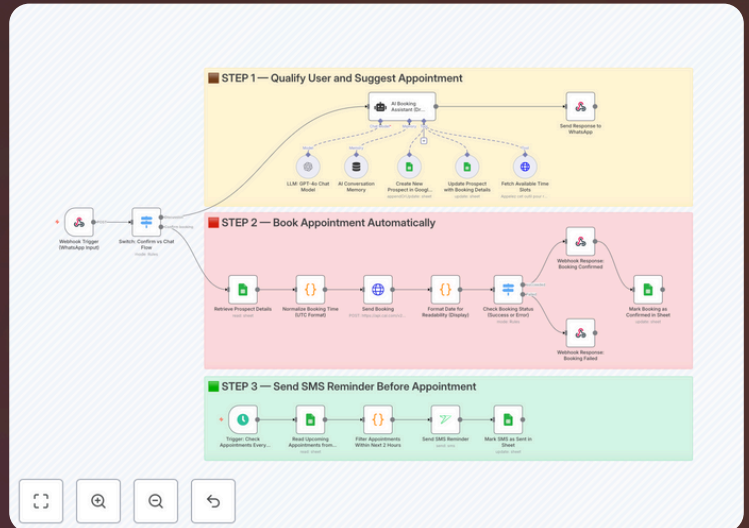

A smart personal assistant that can reason, search, calculate, and remember — powered by Google Gemini and ready in one click.

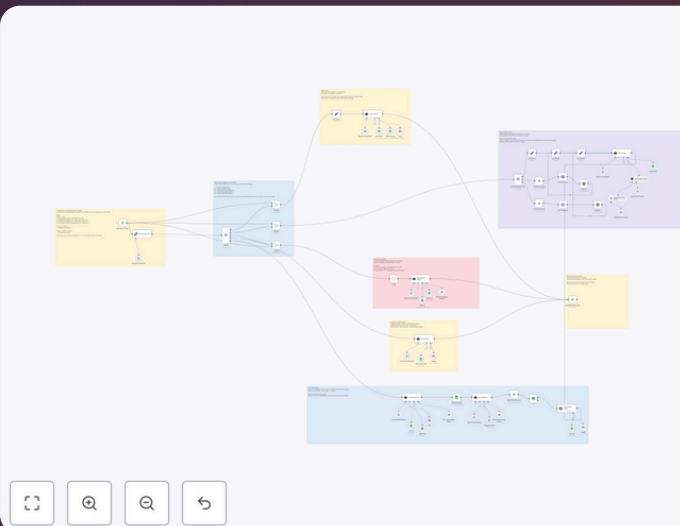

Most AI agents only respond — this one thinks before replying, pulls in real-time facts, does the math, and even remembers the last 5 things you said.

Automate WhatsApp Booking System with GPT-4 Assistant, Cal.com and SMS Reminders

This workflow is designed for solo entrepreneurs, consultants, coaches, clinics, or any business that handles client appointments and wants to automate the entire scheduling experience via WhatsApp — without the need for live agents.

Automated HR Service System with WhatsApp, GPT-4 Classification & Google Workspace

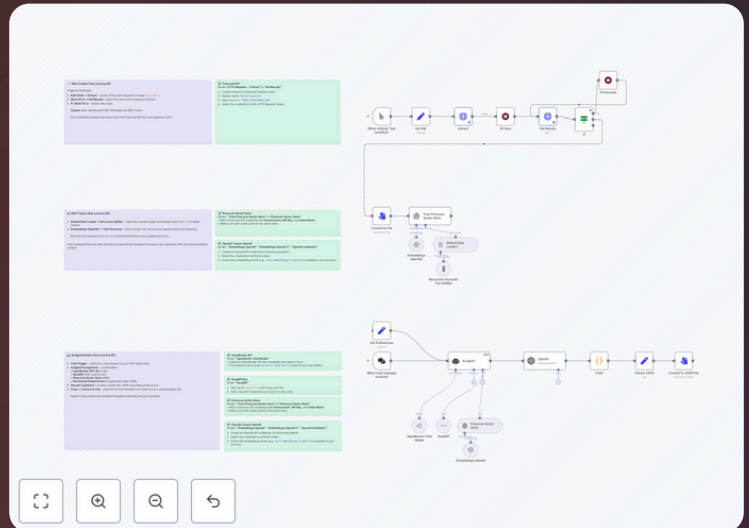

This workflow is ideal for HR teams, startups, and enterprises that want to handle employee interactions through WhatsApp and automate responses using LLM (OpenAI) and intelligent routing.

Build Custom Workflows Automatically with GPT-4o, RAG, and Web Search

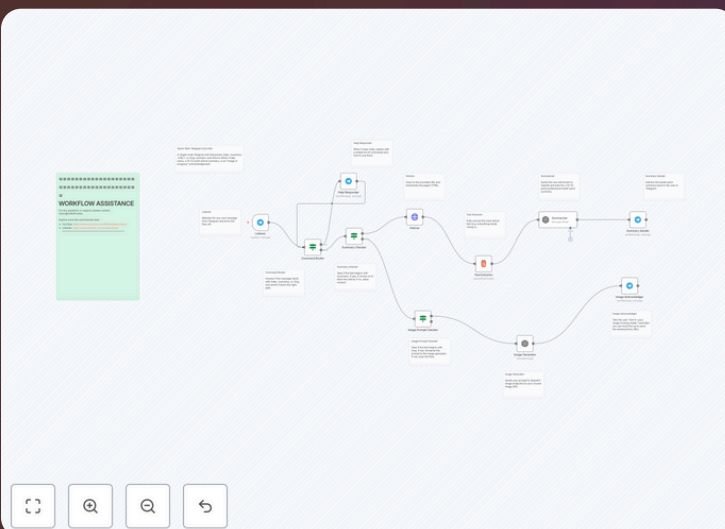

Listens to any incoming chat message (via the Chat Trigger).

Spins up an AI architect that analyses the request, searches the web, reads n8n docs from a Pinecone vector store, and designs the smallest possible set of nodes.

Auto-generates a ready-to-import JSON template and hands it back as a downloadable file—plus all the supporting assets (embeddings, vector store etc.) so the next prompt is even smarter.

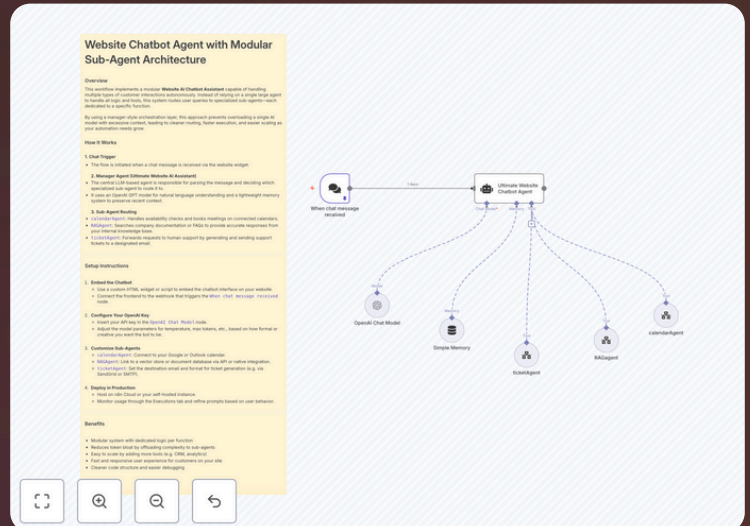

AI Telegram Bot Agent: Smart Assistant & Content Summarizer

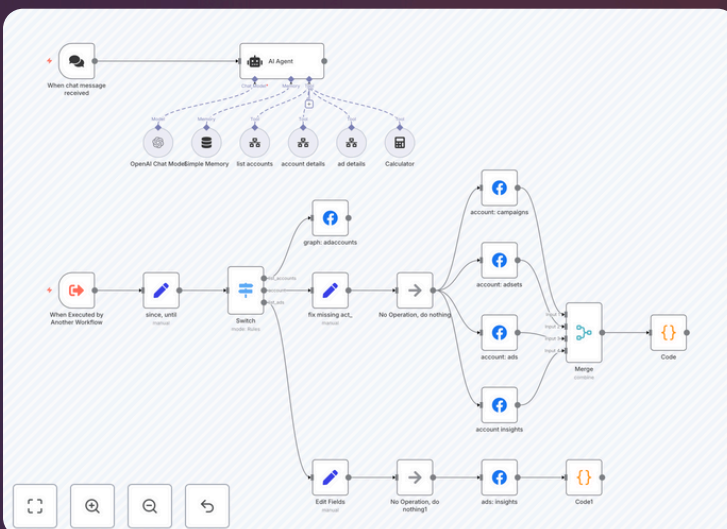

Create your own intelligent Telegram bot that summarizes articles and processes commands automatically. This powerful workflow turns Telegram into your personal AI assistant, handling /help, /summary <URL>, and /img <prompt> commands with intelligent responses - perfect for teams, content creators, and anyone wanting smart automation in their messaging.

Company Website Chatbot Agent (RAG, Calendar integrations)

This workflow implements a modular Website AI Chatbot Assistant capable of handling multiple types of customer interactions autonomously. Instead of relying on a single large agent to handle all logic and tools, this system routes user queries to specialized sub-agents—each dedicated to a specific function.

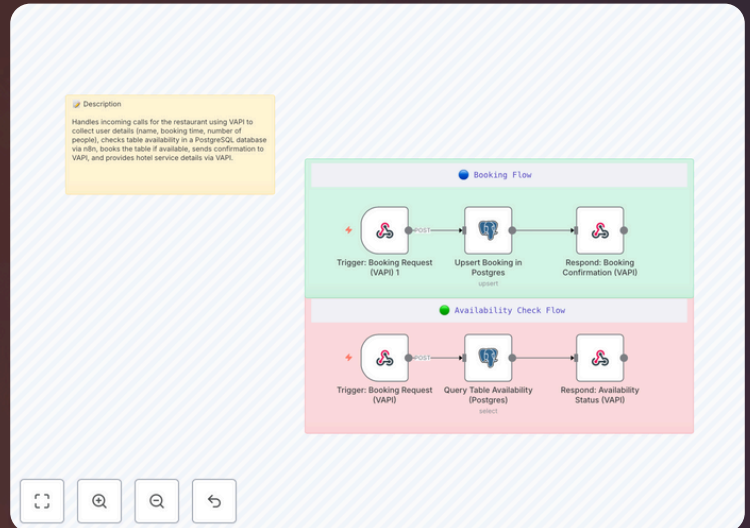

Conversational Meta Ads Reporting & Management with GPT-5

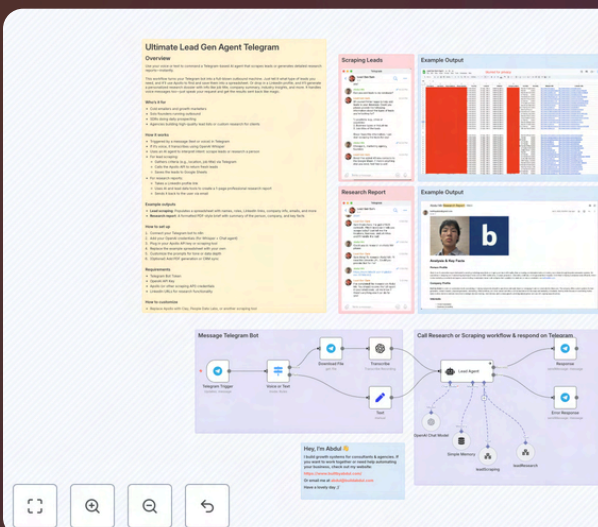

This n8n template creates an intelligent AI assistant that responds to chat messages, providing conversational access to your Meta Ads data. Powered by an OpenAI GPT-5 model and equipped with memory to maintain context, this agent can interact with your Meta Ads accounts via the Facebook Graph API.

Automated Restaurant Call Handling & Table Booking System with VAPI and PostgreSQL

Acts as a virtual receptionist for the restaurant, handling incoming calls via VAPI without human intervention. It collects user details (name, booking time, number of people) for table bookings, checks availability in a PostgreSQL database using n8n, books the table if available, and sends confirmation. It also provides restaurant details to users, mimicking a human receptionist.

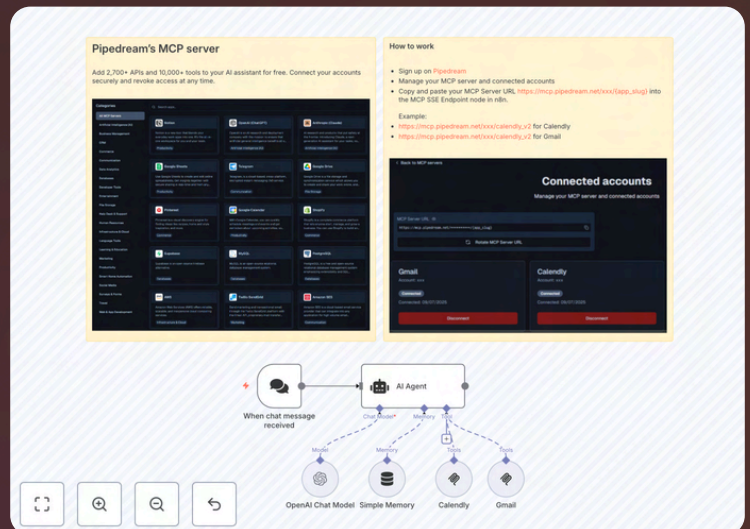

Lead Gen Agent (Telegram)

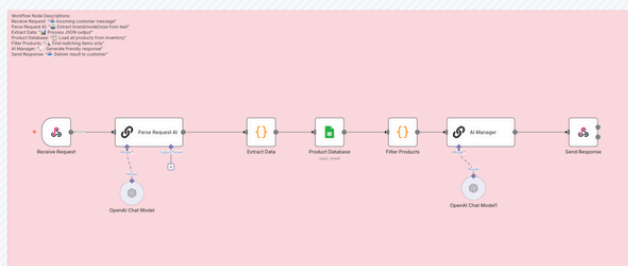

This workflow turns your Telegram bot into a full-blown outbound machine. Just tell it what type of leads you need, and it'll use Apollo to find and save them into a spreadsheet. Or drop in a LinkedIn profile, and it'll generate a personalized research dossier with info like job title, company summary, industry insights, and more.

Build a Scalable AI Chatbot with GPT-4 and Pipedream: Calendly, Gmail Integration

This n8n workflow integrates the powerful Pipedream MCP server with AI capabilities to create a smart, extensible assistant that can interact with over 2,700 APIs and 10,000+ tools — all within a secure and modular structure.

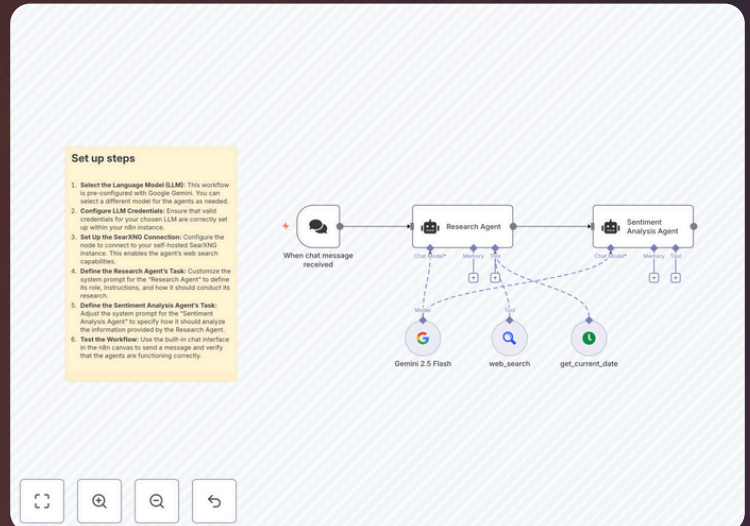

Automated Product Inquiry Responder with GPT-4 and Google Sheets

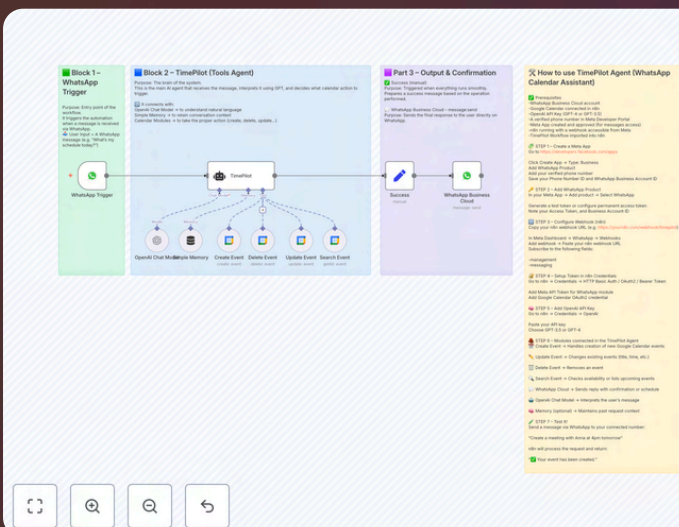

Transform your online store customer service with an intelligent AI assistant that automatically processes customer inquiries, searches your product database, and provides personalized responses about product availability, pricing, and specifications. Perfect for shoe stores, fashion retailers, and any business with extensive product catalogs - this workflow eliminates manual customer service while increasing response speed and accuracy.

News Research and Sentiment Analysis AI Agent with Gemini and SearXNG

This n8n workflow operates as a two-agent system where each agent has a specialized task. The process flows from initial user input to a final analysis, with a seamless handoff between the agents.

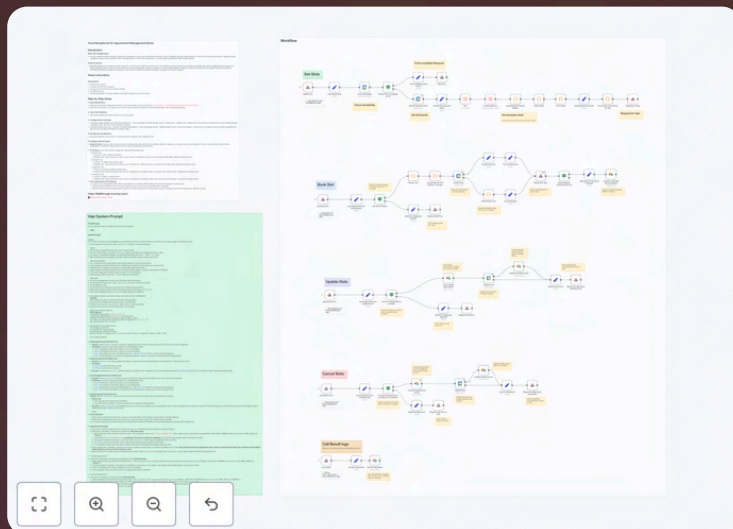

Manage Google Calendar via WhatsApp with GPT-4 Virtual Assistant

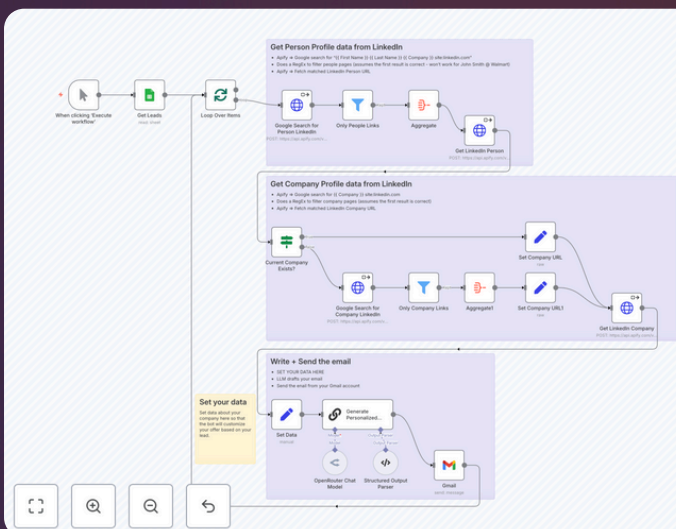

- Allows users to manage their Google Calendar via WhatsApp using natural language
- Handles event creation, updates, deletions, availability checks, and agenda overviews
- AI agent interprets the user's message and triggers the appropriate calendar action
- Responses are sent back to the user via WhatsApp, with confirmation or schedule info

Automate Call Scheduling with Voice AI Receptionist using Vapi, Google Calendar & Airtable

This template is ideal for small businesses, agencies, and solo professionals who want to automate appointment scheduling and caller follow-up through a voice-based AI receptionist. If you're using tools like Google Calendar, Airtable, and Vapi (Twilio), this setup is for you.

Generate Personalized Sales Emails with LinkedIn Data & Claude 3.7 via OpenRouter

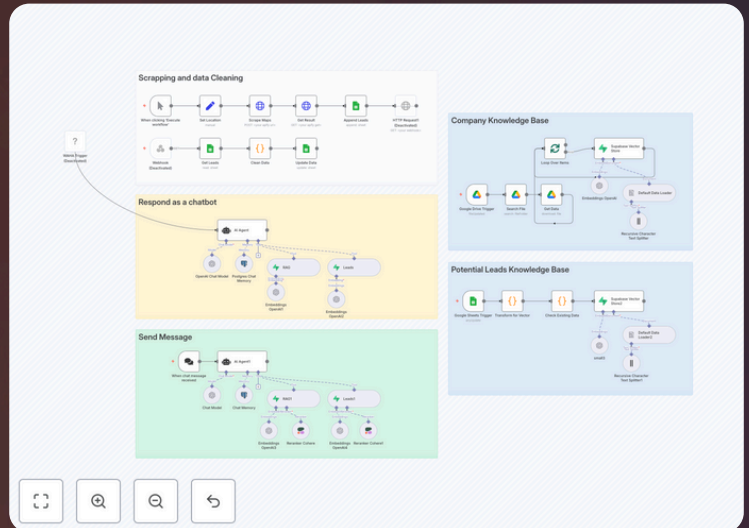

The automation loads rows from a Google Sheet of leads that you want to contact.

It makes a Google search via Apify for LinkedIn links based on the First name / Last name / Company.

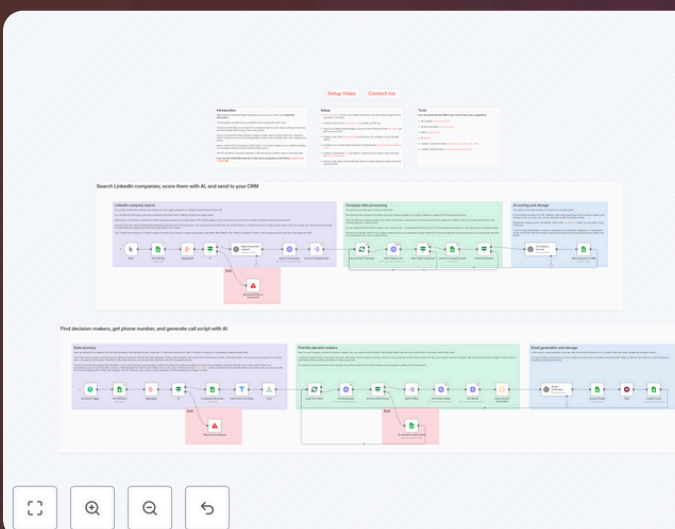

Another Apify actor fetches the right LinkedIn profile based on the first profile which is returned

Automate Sales Cold Calling Pipeline with Apify, GPT-4o, and WhatsApp

The "Cold Calling Automation" workflow is designed to fully automate the end-to-end cold calling process by intelligently combining web scraping, AI-powered research, and WhatsApp messaging. Leveraging key technologies such as Apify for data scraping, RAG (Retrieval-Augmented Generation) for intelligent content creation

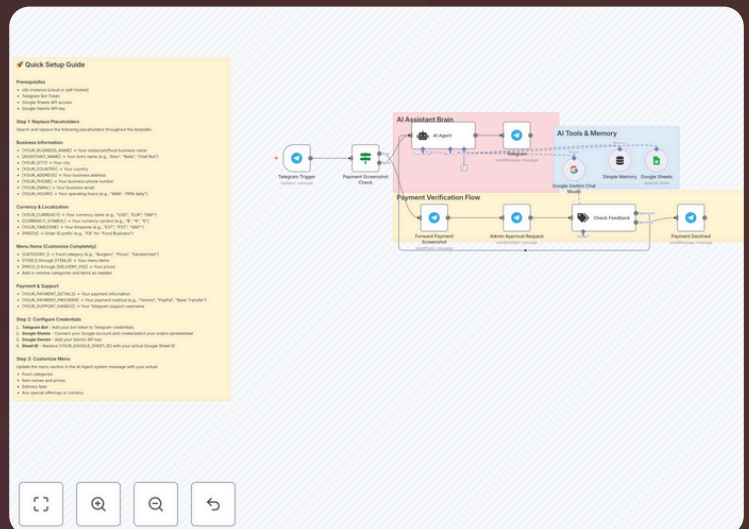

AI-Powered Cold Call Machine with LinkedIn, OpenAI & Sales Navigator

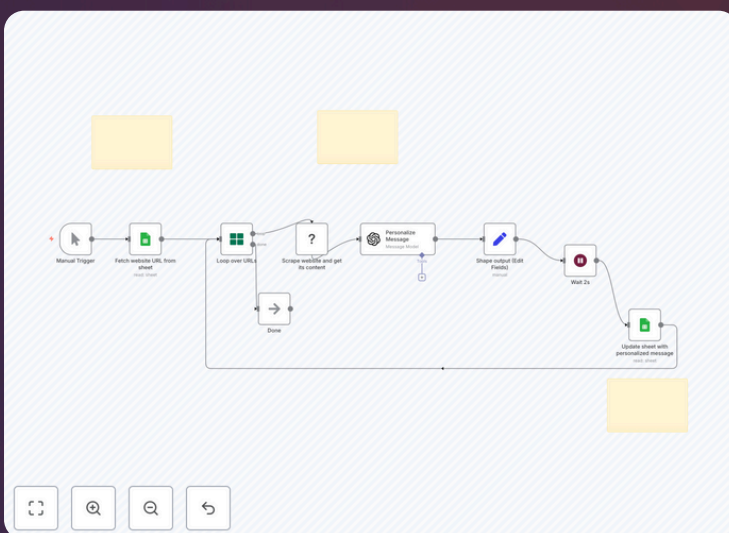

The AI-Powered Cold Call Machine is a fully automated workflow designed to generate qualified leads from LinkedIn, evaluate them using AI-based scoring, identify key decision-makers, and generate personalized cold call scripts. All results are saved to a Google Sheet-based CRM.

AI Sales Agent with Telegram Approvals & Google Sheets Sync

A complete, ready-to-deploy Telegram chatbot template for food delivery businesses. This intelligent assistant handles orders, payments, customer service, and order tracking with human-in-the-loop payment verification.

Generate AI Sales Pitches from Website URLs with GPT-4o and Google Sheets

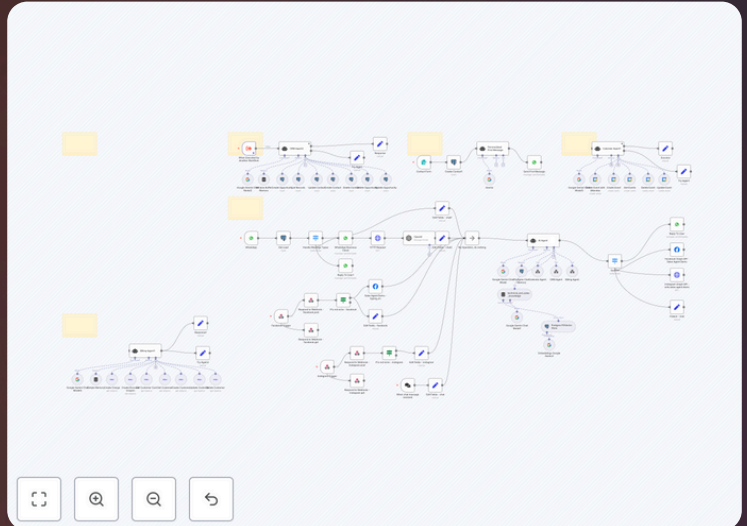

This n8n workflow converts a simple list of website URLs in Google Sheets into a concise, consultative Context + AI pitch for each organization. It scrapes real page content (markdown preferred), feeds it to OpenAI with tight prompts to avoid fluff, and writes the result back to the same sheet row.

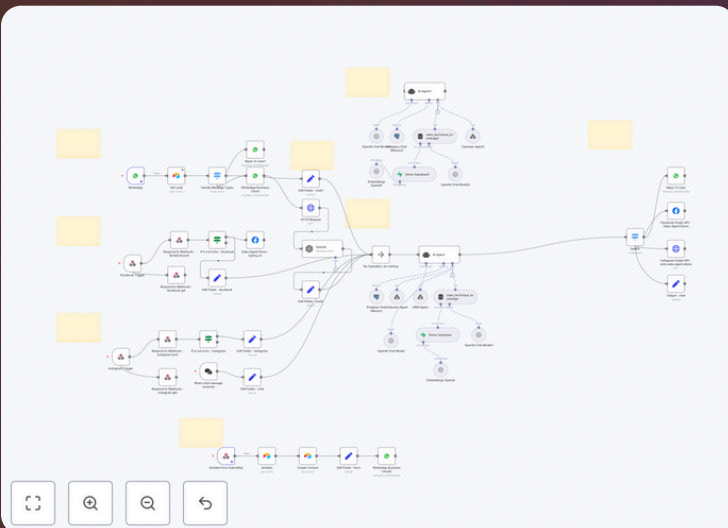

Multi-Platform AI Sales Agent with RAG, CRM, Calendar & Stripe

Turn More Website and Social Media Leads into Sales, Automatically.

This AI workflow instantly connects with new leads from your website, WhatsApp, Instagram, and Facebook to boost your sales.

AI Sales Agent: WhatsApp, FB, IG, OpenAI, Airtable, Supabase Auto-Booking

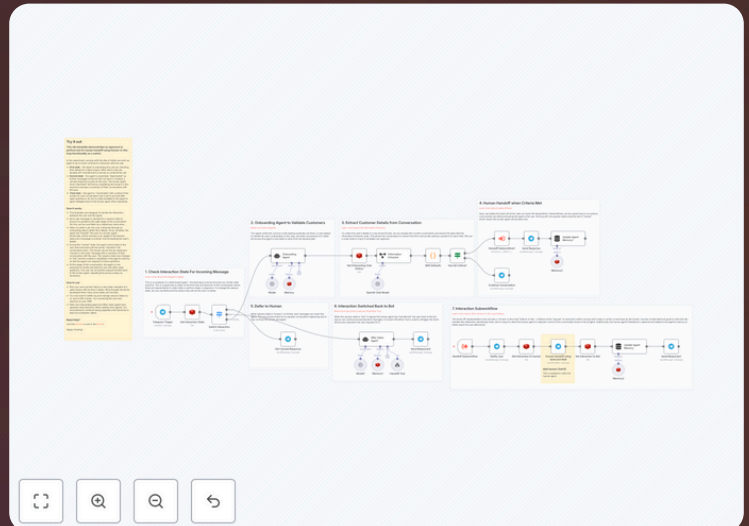

This workflow automates multi-channel AI-driven sales engagement for lead qualification, service information delivery, and consultation booking. It integrates WhatsApp, Facebook Messenger, Instagram DM, and an n8n chat interface with a backend CRM (Airtable), a knowledge base (Supabase), and conversational AI (OpenAI), all orchestrated by n8n.

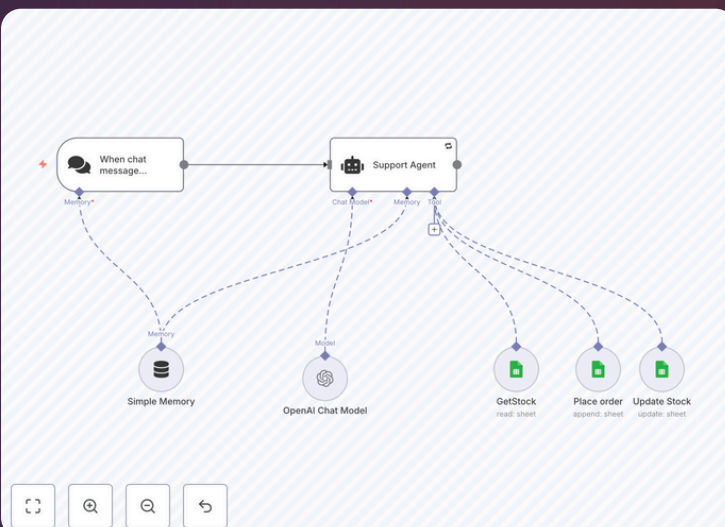

Telegram AI Bot-to-Human Handoff for Sales Calls

This template uses telegram to handle the interaction between the user and the agent.

Each user message is checked for a session state to ensure it is guided to the right stage of the conversation. For this, we can use Redis as a simple key-value store. When no state is set, the user is directed through an onboarding step to attain their details. Once complete, the agent will "transfer" the user to a human agent - technically, all this involves is an update to the session state and a message to another chat forwarding the user's details.

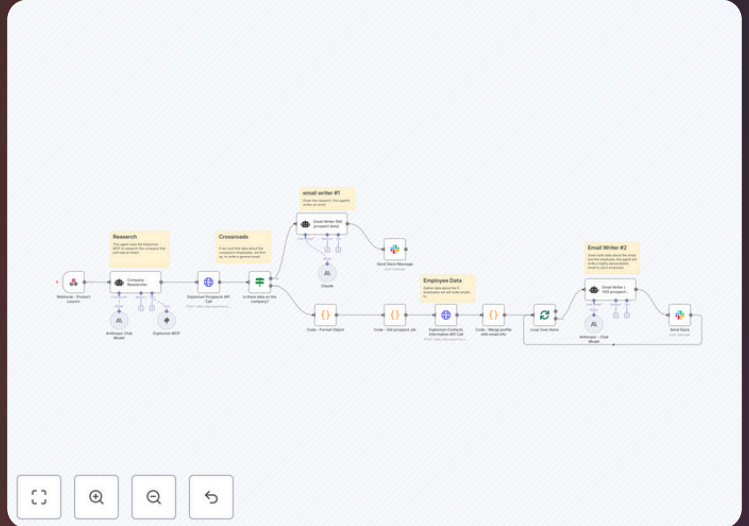

Smart Sales Support Chatbot with GPT-4o and Google Sheets

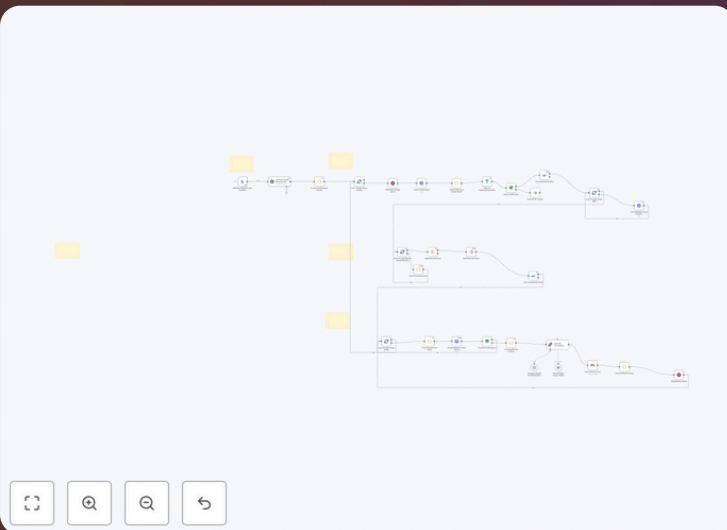

This workflow powers a simple yet effective customer and sales support chatbot for your webshop. It's perfect for solopreneurs who want to automate customer interactions without relying on expensive or complex support tools.

Generate Sales Emails Based on Business Events with Explorium MCP & Claude

This n8n and agent-based workflow automates outbound prospecting by monitoring Explorium event data (e.g. product launches, new office opening, new investment and more), researching companies, identifying key contacts, and generating tailored sales emails leveraging the Explorium MCP server.

Automate Sales for Digital Products & SaaS with AI (GPT-4o)

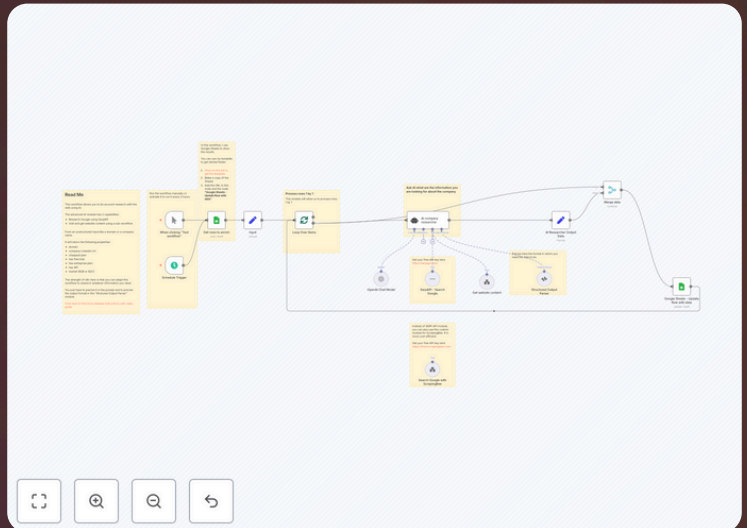

Tired of manually finding leads, collecting emails, and sending messages that get ignored? Let AI do the heavy lifting.

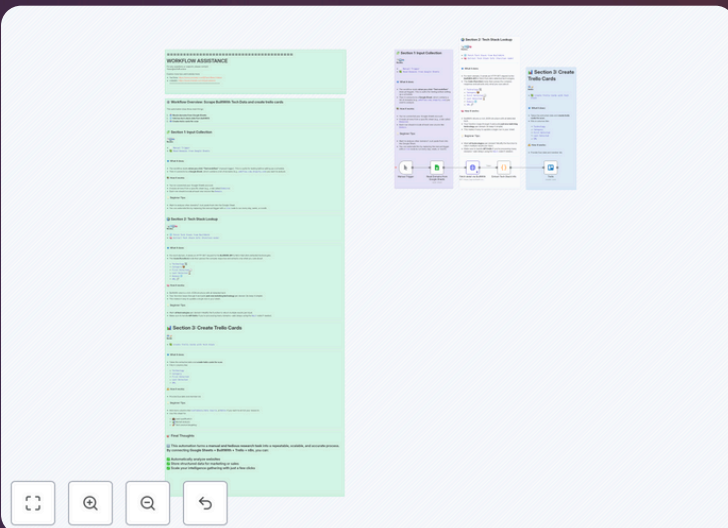

Introducing AI-Powered Cold Outreach Engine, an n8n workflow that automates prospecting, email discovery, and personalized outreach, designed for digital products, SaaS, and online services.

AI web researcher for sales

This workflow is for all sales reps and lead generation manager who need to prepare their prospecting activities, and find relevant information to personalize their outreach. This workflow allows you to do account research with the web using AI.

Automate Sales Pipeline: BuiltWith Technology Data to Trello Lead Cards with Google Sheets

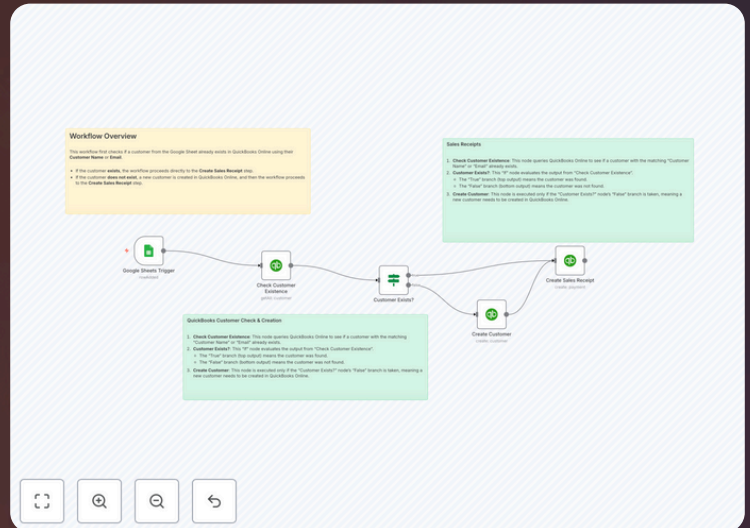

Automated workflow that transforms BuiltWith technology data into actionable sales leads in Trello, creating a visual sales pipeline.

What It Does

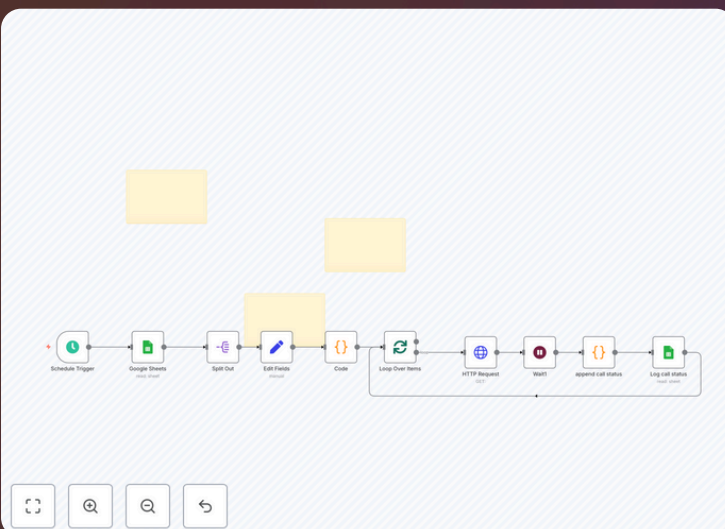

- Converts tech stack data into Trello cards
- Organizes leads by technology stack
- Tracks sales pipeline stages
- Enables team collaboration
- Updates automatically

Automate QuickBooks Customers & Sales Receipts Generation from a Google Sheet

Simply add new transaction details to a designated Google Sheet, and this workflow takes over. Using specific status keywords in a column to trigger the process, it automatically creates new customer profiles and generates sales receipts in QuickBooks. This creates a complete, end-to-end system from a simple spreadsheet entry to a formal accounting record, eliminating manual data entry.

Automate Outbound Sales Calls to Qualified Leads with VAPI.ai and Google Sheets

The workflow starts by reading leads from a Google Sheet where the "AI call status" is marked as "NO"

Batch Processing: Leads are processed one at a time (batch size = 1) to ensure proper sequencing

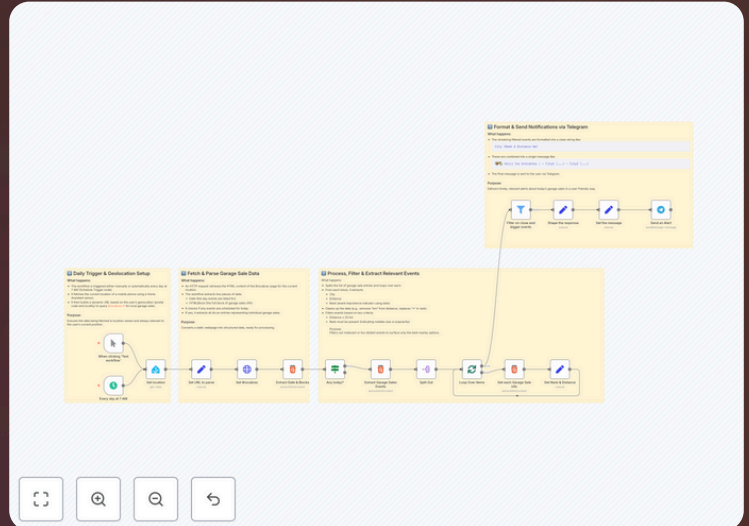

Variable Setup: Extracts the phone number and row number from each lead record

Trigger VAPI Call: Makes an API call to [VAPI.ai](https://vapi.ai) to initiate an AI-powered outbound call

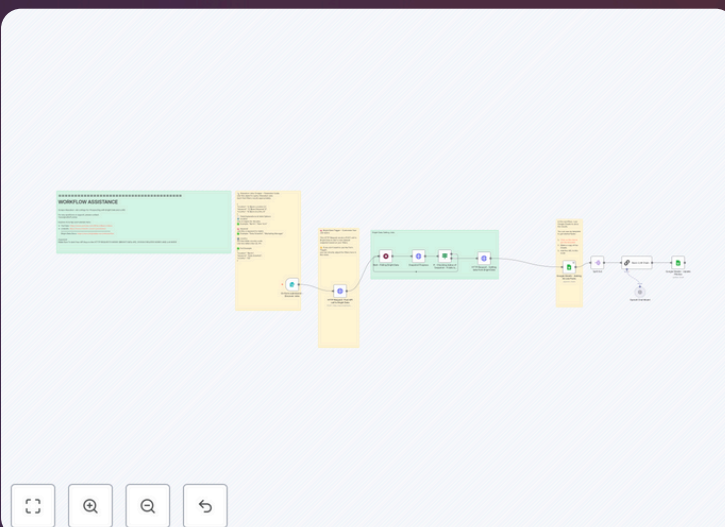

Update Status: Marks the lead as "YES" in the Google Sheet after the call is triggered to prevent duplicate calls

Daily Nearby Garage Sales Alerts via Telegram

Get a personalized list of garage sales happening today, based on your current location, directly in Telegram each morning! This n8n workflow integrates Home Assistant and [Brocabrac.fr](https://brocabrac.fr):

Find High-Intent Sales Leads by Scraping Glassdoor with Bright Data & GPT

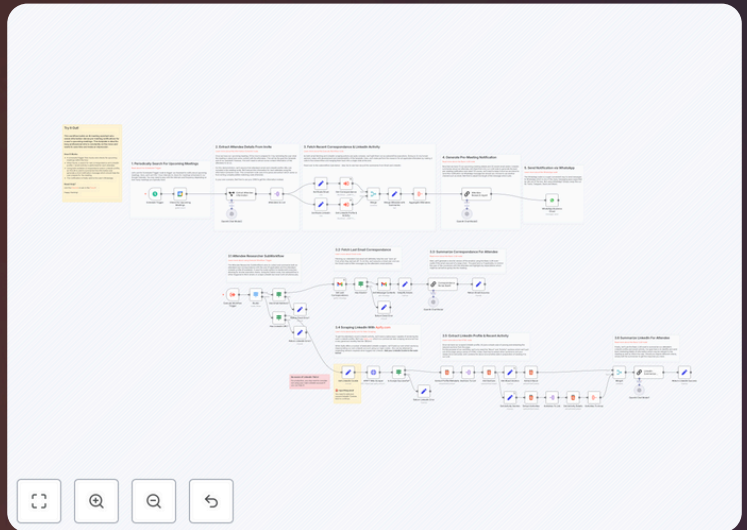

Designed for sales teams, recruiters, and marketers aiming to automate job discovery and prospecting.

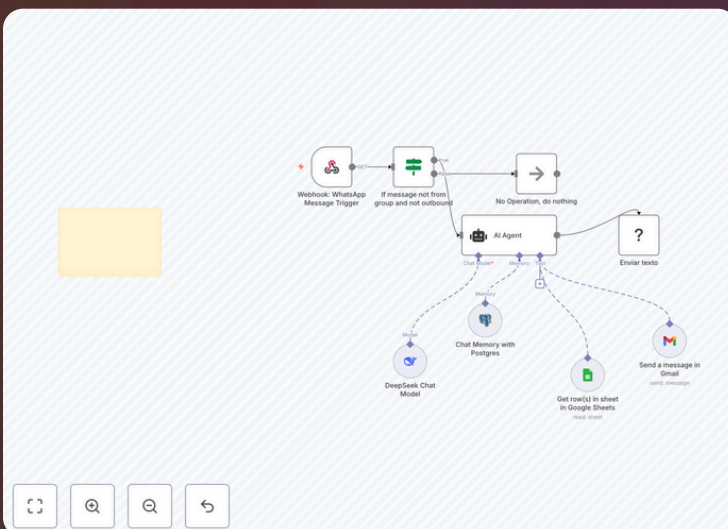

This workflow scrapes Glassdoor job listings using Bright Data and automatically generates targeted pitches using AI, streamlining lead identification and outreach.

Automate Sales Meeting Prep with AI & APIFY Sent To WhatsApp

This n8n template builds a meeting assistant that compiles timely reminders of upcoming meetings filled with email history and recent LinkedIn activity of other people on the invite. This is then discreetly sent via WhatsApp ensuring the user is always prepared, informed and ready to impress!

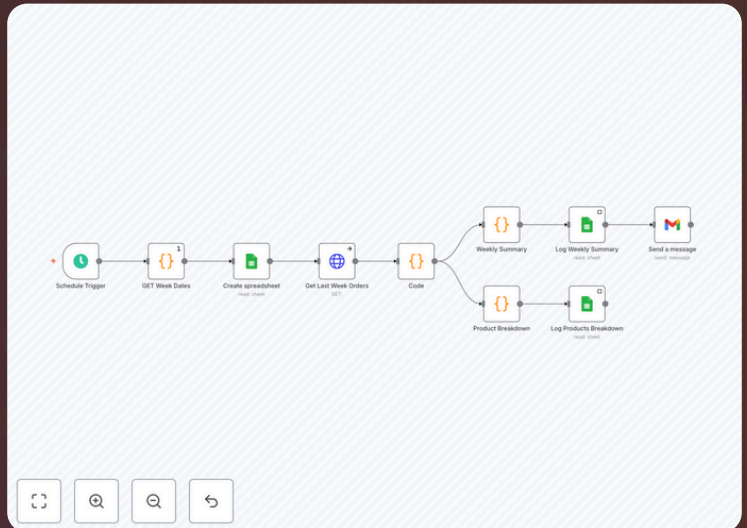

Automate WhatsApp Sales with DeepSeek AI, Google Sheets and Gmail Notifications

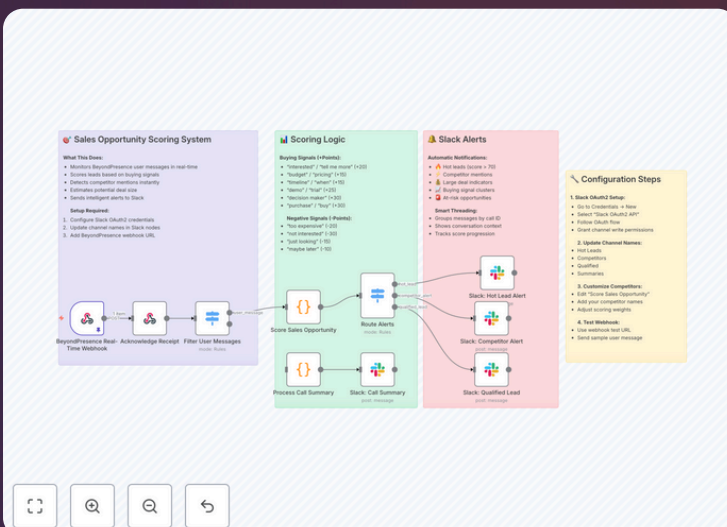

Turn your WhatsApp channel into a smart sales assistant! This workflow listens for inbound customer messages, looks up product data in Google Sheets, uses a DeepSeek Chat Model to answer in Saudi dialect, collects purchase details, and notifies your service rep only when the customer is ready to buy.

Automate Your Magento 2 Weekly Sales & Performance Reports

This workflow automatically fetches the last 7 days of orders from your Magento 2 store, summarizes key metrics (orders, revenue, products sold), groups product performance data, generates a Google Sheet with two tabs (Weekly Summary & Product Breakdown), and emails the report to your team in a modern dashboard-style HTML format — all without ever logging into Magento admin.

BeyondPresence Sales Intelligence → Real-Time Lead Scoring

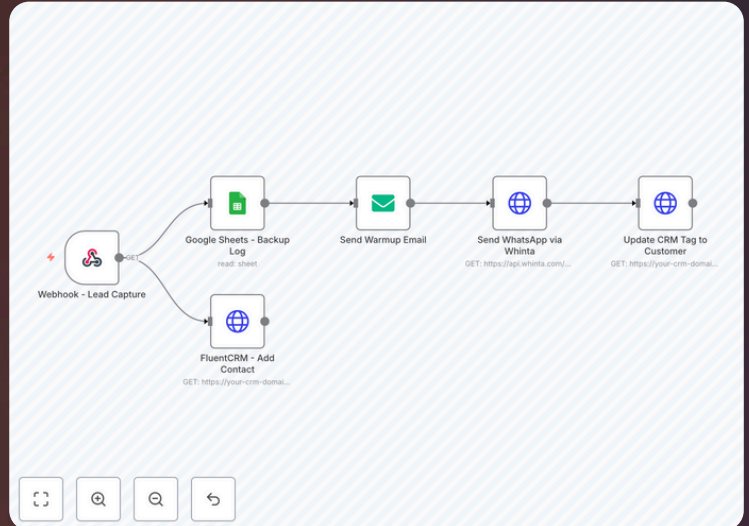

Monitor BeyondPresence video agent conversations in real-time to automatically score leads (0-100+) based on buying signals and send instant Slack alerts when hot opportunities or competitors are mentioned. This template helps sales teams prioritize leads immediately, never miss competitor mentions, and respond to high-intent prospects while they're still engaged.

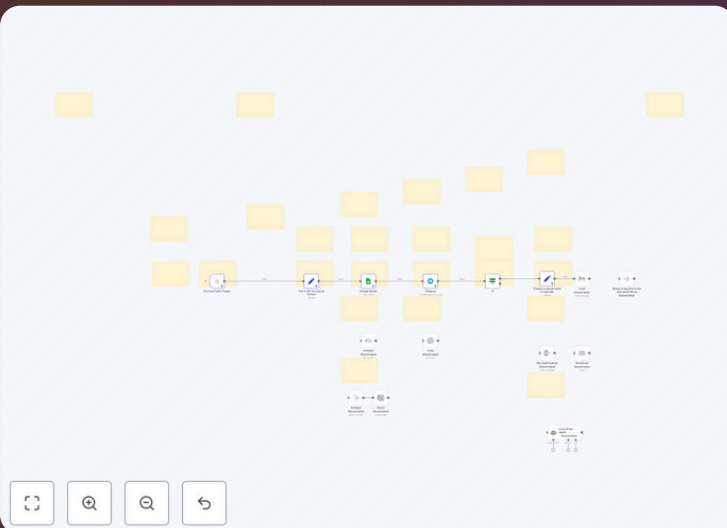

YouTube to WhatsApp Sales Automation with WordPress, FluentCRM and Whinta

Automate your lead nurturing and sales process from YouTube/Instagram → Landing Page → CRM → Email → WhatsApp → Sales → Deal Closure using tools like:

- WordPress (Landing Page + Fluent Forms)
- Google Sheets (Backup Log)
- FluentCRM (Lead Tagging + Email Sequences)
- [Whinta.com](https://whinta.com) (WhatsApp Messaging API)
- N8N (Workflow Automation Engine)

Gumroad Clientbell: Auto-Log Sales, Ping Telegram, & Thank via Email

This template is perfect for Gumroad creators, solopreneurs, digital product sellers, and freelancers who want to track and thank customers automatically — without spending time on manual work.

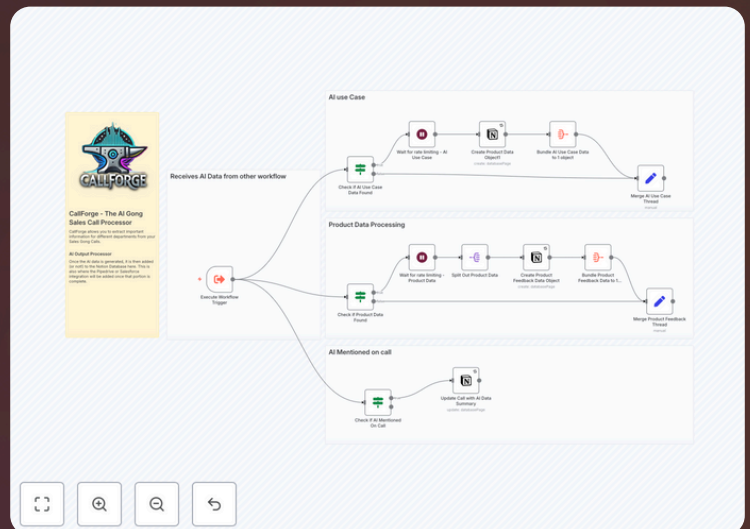

CallForge - 08 - AI Product Insights from Sales Calls with Notion

This workflow is designed for:

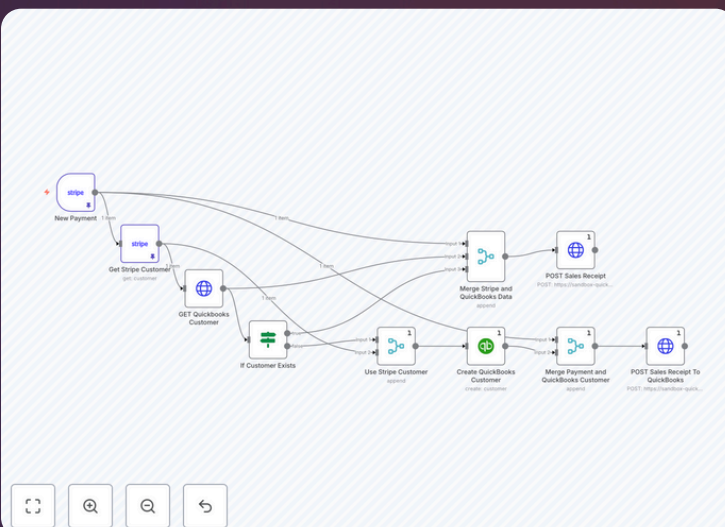

Product managers tracking customer feedback and feature requests.

Engineering teams identifying usability issues and AI/ML-related mentions.

Customer success teams monitoring product pain points from real sales conversations.

Create QuickBooks Online Customers With Sales Receipts For New Stripe Payments

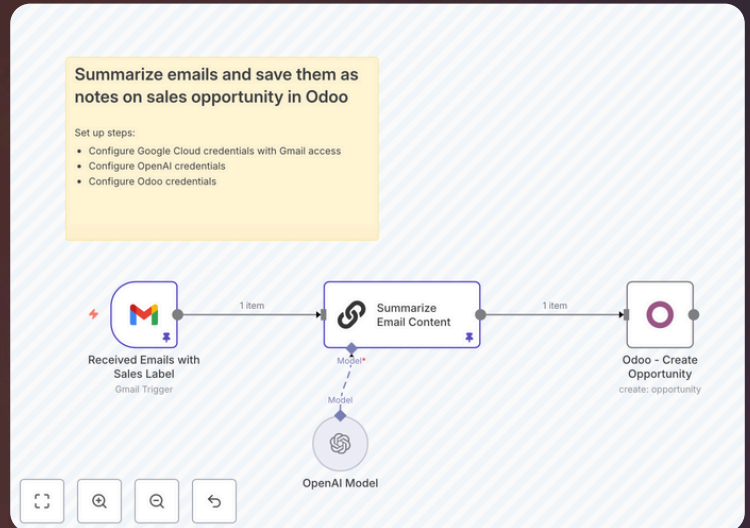

Streamline your accounting by automatically creating QuickBooks Online customers and sales receipts whenever a successful Stripe payment is processed. Ideal for businesses looking to reduce manual data entry and improve accounting efficiency.

Summarize emails and save them as notes on sales opportunity in Odoo

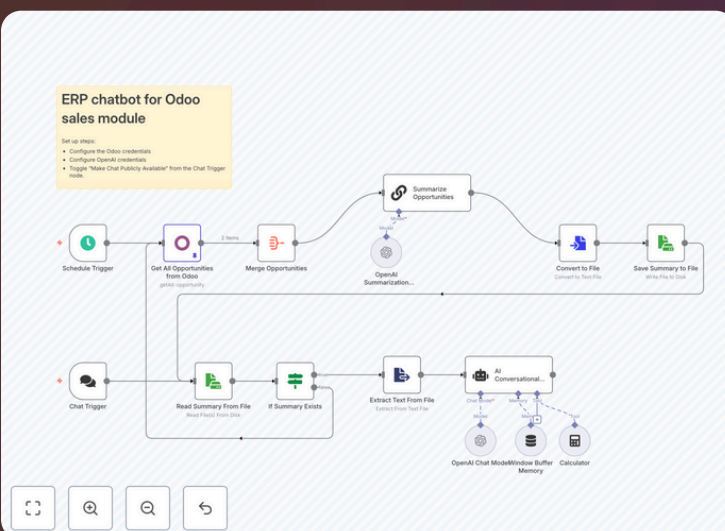

This n8n workflow automates the process of extracting information from emails. It uses OpenAI to summarize sales emails and adds this information in Odoo.

How it works:

- When an email is received with a certain label, it sends the email to OpenAI for summarization
- A sales opportunity is created in Odoo with the email subject as title and the email summary as internal note

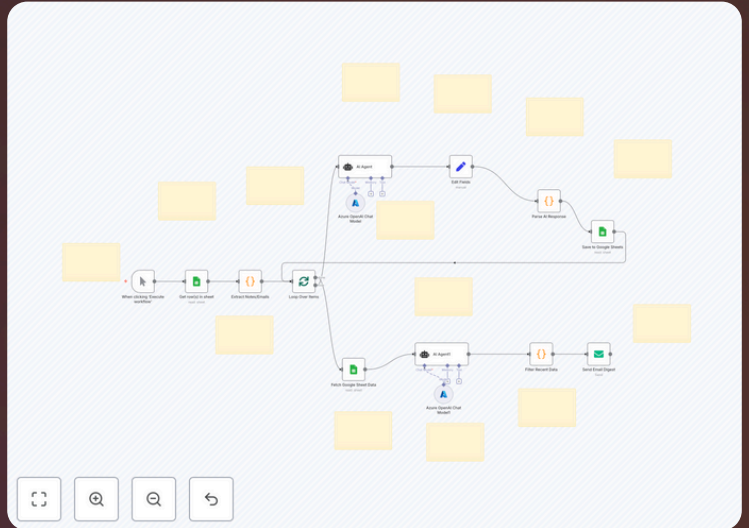

ERP AI chatbot for Odoo sales module with OpenAI

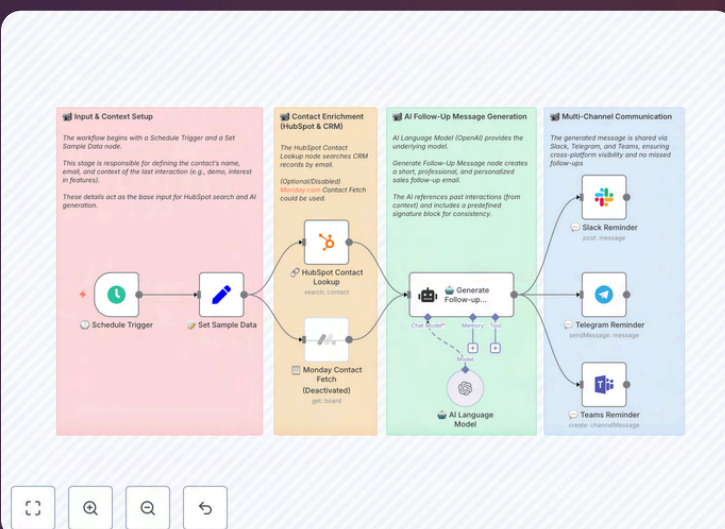

This workflow is for everyone who wants to have easier access to their Odoo sales data without complex queries. To have a clear overview of your sales data in Odoo you typically need to extract data from it manually to analyse it. This workflow uses OpenAI's language models to create an intelligent chatbot that provides conversational access to your Odoo sales opportunity data.

Analyze Sales Deal Outcomes with Azure OpenAI and Google Sheets Reporting

This automation connects to your sales feedback sheet, processes deal outcomes with an AI model, classifies win/loss reasons, summarizes key patterns, and creates professional HTML email digests. The enriched insights are stored in Google Sheets and shared via automated email reports—giving sales, product, and leadership teams a clear view of what drives success or loss.

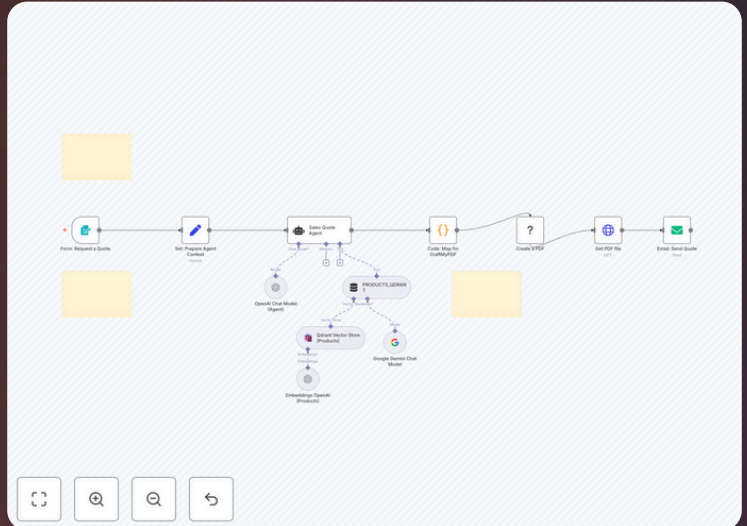

Automate Sales Follow-Ups with GPT-4o-mini, HubSpot, Slack, Teams & Telegram

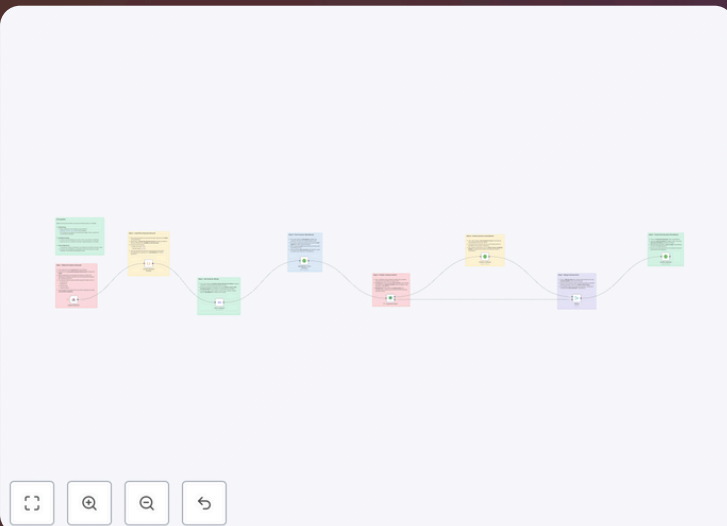

This workflow automatically generates personalized follow-up messages for leads or customers after key interactions (e.g., demos, sales calls). It enriches contact details from HubSpot (or optionally [Monday.com](https://www.monday.com)), uses AI to draft a professional follow-up email, and distributes it across multiple communication channels (Slack, Telegram, Teams) as reminders for the sales team.

Generate AI-Curated Sales Quotes with OpenAI, Qdrant & CraftMyPDF PDF Delivery

Turn form submissions into AI-curated quotes with SKU selection straight from Qdrant, branded PDF generation, and automatic email—now streamlined for quoting only

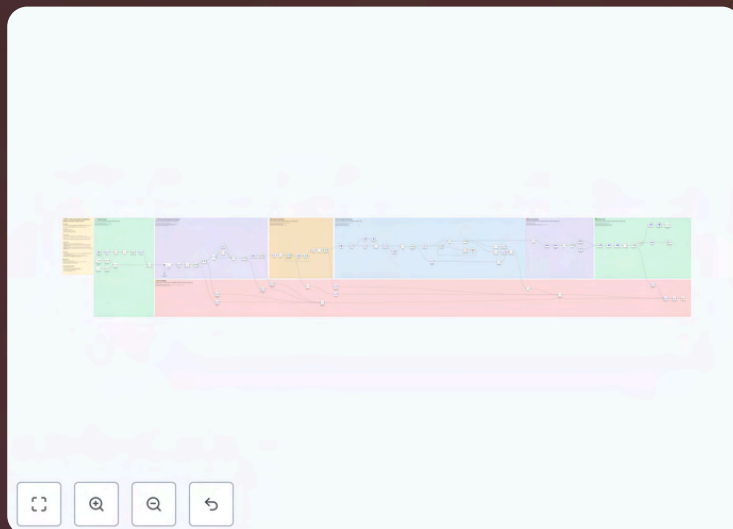

Automate QuickBooks Sales Receipts & Customer Creation from Stripe Payments

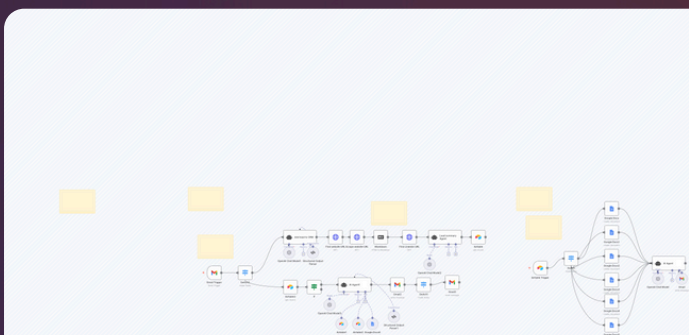

This workflow automates the process of recording successful payments from Stripe into QuickBooks by creating corresponding Sales Receipts. It ensures payment data is captured accurately, checks whether the customer exists in QuickBooks, and creates a new customer if necessary before generating the receipt.

Automate PDF Purchase Orders to Sales Orders in Adobe Commerce with AI

This n8n template demonstrates how to automatically process PDF purchase orders received via email and convert them into sales orders in Adobe Commerce (Magento 2) using Company Credit as the payment method.

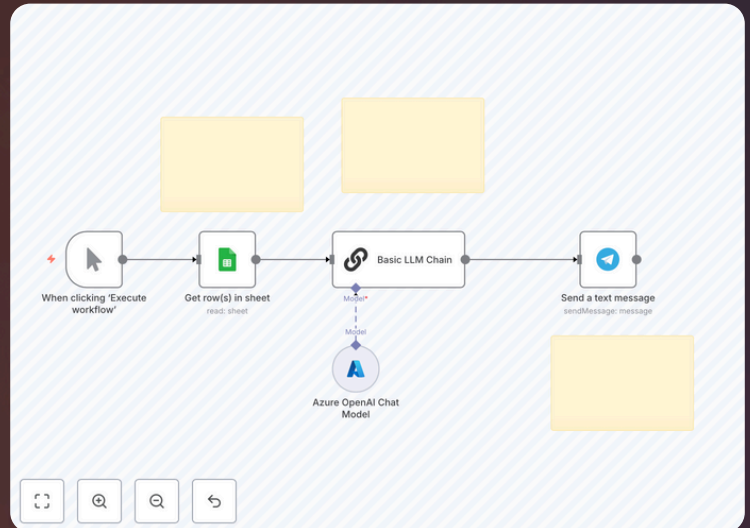

AI-Powered Sales Assistant with Airtable CRM, Gmail and Web Research

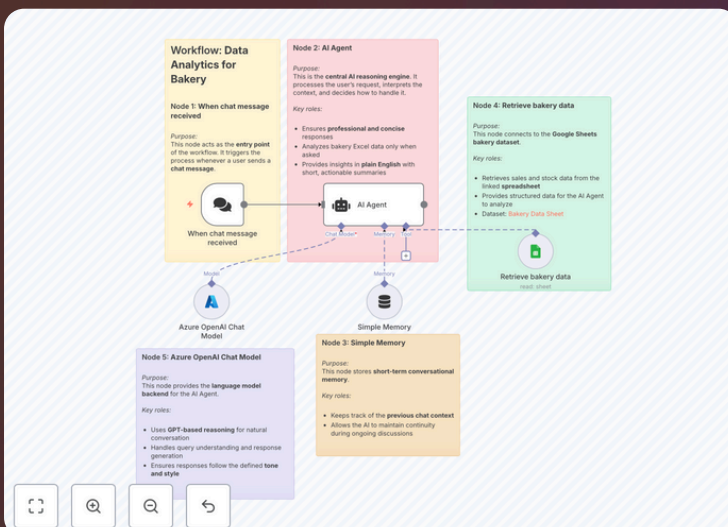

This n8n workflow automates sales processes using AI agents integrated with Airtable as a CRM and Gmail for email handling. It consists of two main workflows: one for handling Airtable status changes to send automated emails, and another for processing incoming emails to add new leads to the CRM or respond to existing leads/clients.

Generate Sales Reports from Google Sheets with Azure OpenAI and Telegram

Transform your spreadsheet data into actionable intelligence with this smart n8n workflow template! This automation extracts sales, lead, and customer data from spreadsheets, analyzes it with Azure OpenAI, and delivers concise

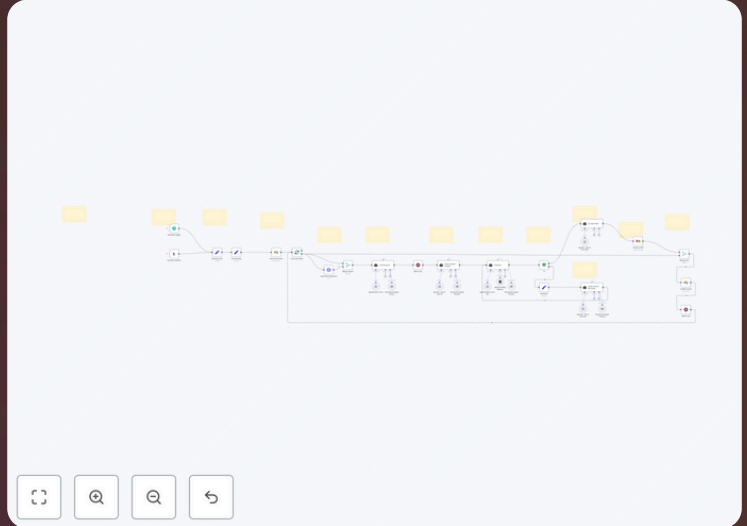

Analyze Bakery Sales & Inventory with Google Sheets & Azure GPT Chat Assistant

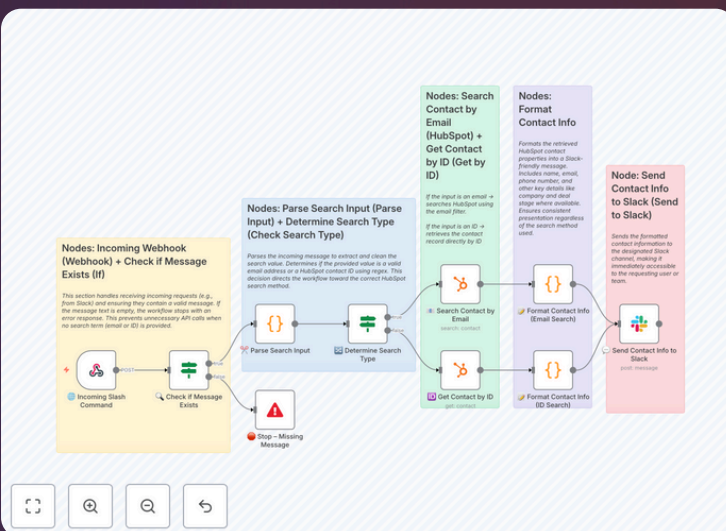

The aim of the Bakery Data Analytics Workflow is to automate the process of analyzing bakery sales and stock data stored in Google Sheets. It allows bakery owners or managers to interact with an AI assistant via chat and receive clear, concise, and actionable insights about their business performance without manually reviewing spreadsheets.

Generate and Research Sales Leads with Jina AI & OpenAI Email Automation via Gmail

Generate personalized sales leads, ready-to-send, HTML-formatted emails, and send them automatically. This workflow is ideal for sales professionals, marketers, and business development teams aiming to scale their outreach.

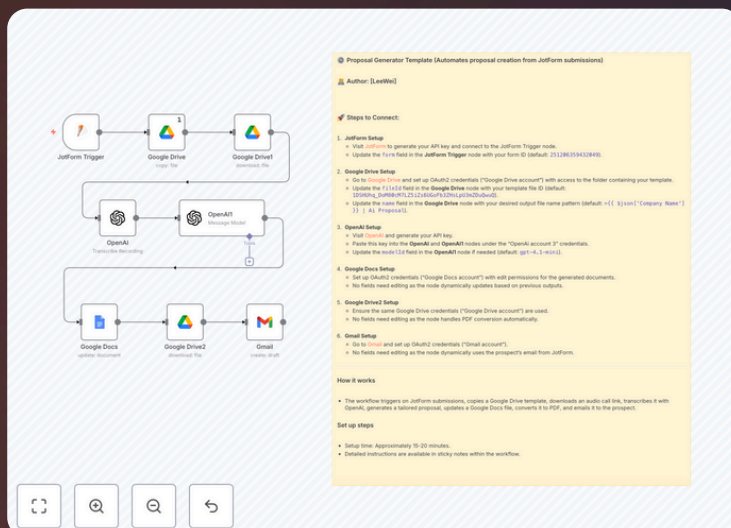

Quick HubSpot Contact Lookup in Slack for Sales & Support Teams

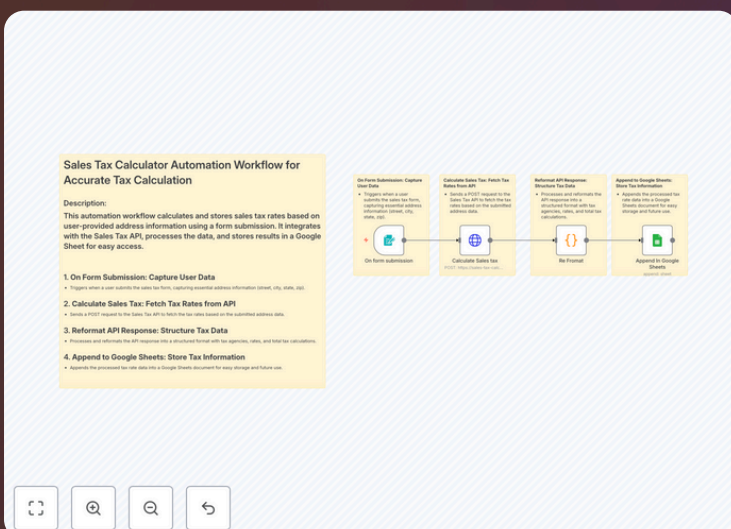

This workflow starts when a user triggers a custom slash command in Slack. The workflow checks if a valid message (email address or HubSpot contact ID) was provided. Based on the input, it searches HubSpot for the contact either by email or by ID. Once the contact is found, the workflow formats the details into a clean, Slack-friendly message card and posts it back into the Slack channel.

Generate AI-Powered Sales Proposals from JotForm Leads with OpenAI and Google Docs

The workflow triggers on JotForm submissions, copies a Google Drive template, downloads an audio call link, transcribes it with OpenAI, generates a tailored proposal, updates a Google Docs file, converts it to PDF, and emails it to the prospect.

Automate Sales Tax Calculation with Sales Tax Calculator API & Google Sheets

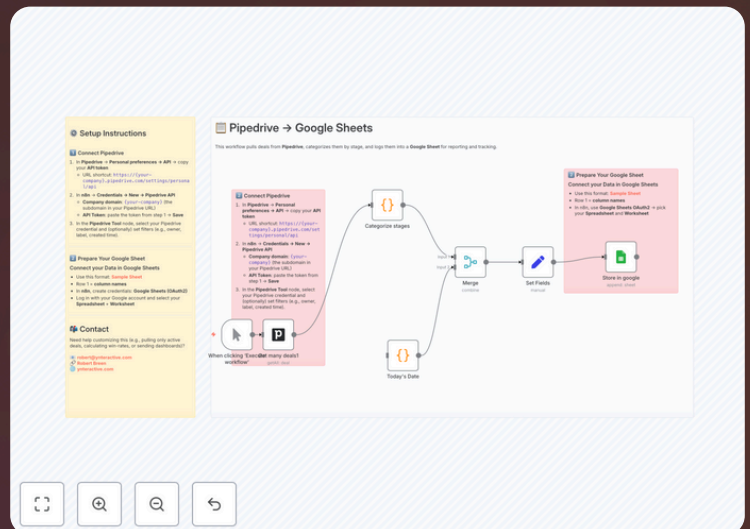

Sales Tax Calculator API Integration: Automate Tax Calculation with Google Sheets & RapidAPI

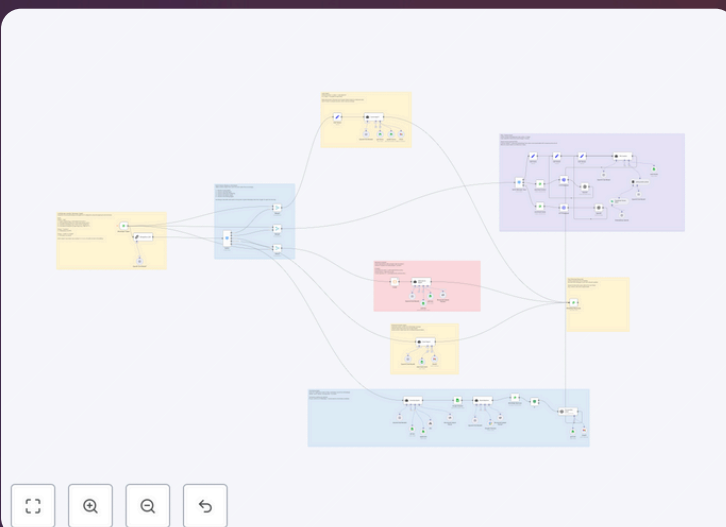

Effortlessly calculate and store sales tax rates based on user address data using the [Sales Tax Calculator API](#) on [RapidAPI](#). Automate the process, format the data, and store results in Google Sheets for easy access.**

Track Pipedrive Deals in Google Sheets for Sales Pipeline Reporting

This workflow pulls deals from Pipedrive, categorizes them by stage, and logs them into a Google Sheet for reporting and tracking.

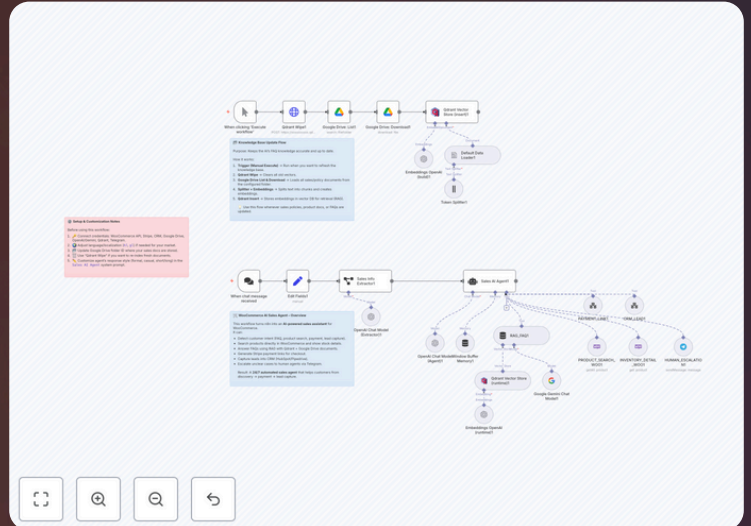

Automate Sales Outreach with OpenAI, Tavily & Google Sheets for Prospect Research

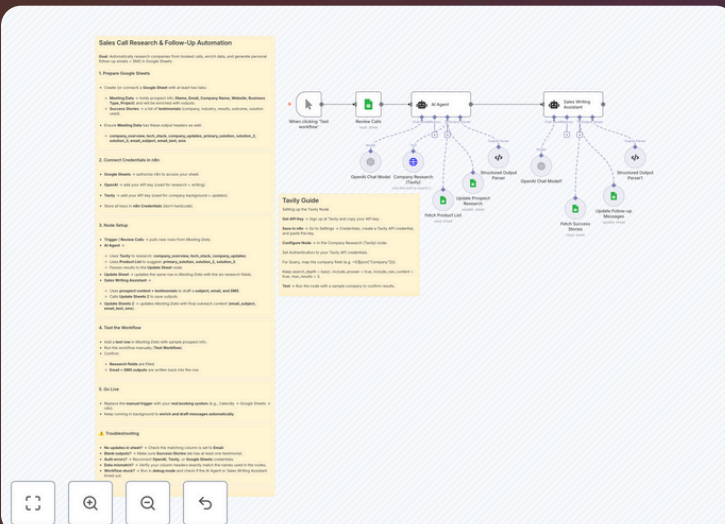

- Triggers on a new sales call booking (manual for testing).
- Pulls prospect details from Google Sheets and researches their company, tech stack, and updates using Tavily.
- Matches relevant products/solutions from your product list and updates the sheet.
- Generates personalized email confirmation (subject + body) and SMS using testimonials for relevance.
- Updates the sheet with the outreach content for easy follow-up.

Conversational Sales Agent for WooCommerce with GPT-4, Stripe and CRM Integration

This workflow transforms your n8n instance into a fully automated AI sales assistant for WooCommerce stores. It detects customer intent from chat, searches products, answers FAQs, generates Stripe payment links, captures leads into your CRM, and even escalates to human support when needed. It provides smooth conversational memory and syncs with your knowledge base to ensure accurate, human-like responses.

Automate Sales Call Research and Follow-Ups with GPT-4, Tavily, Google Sheets

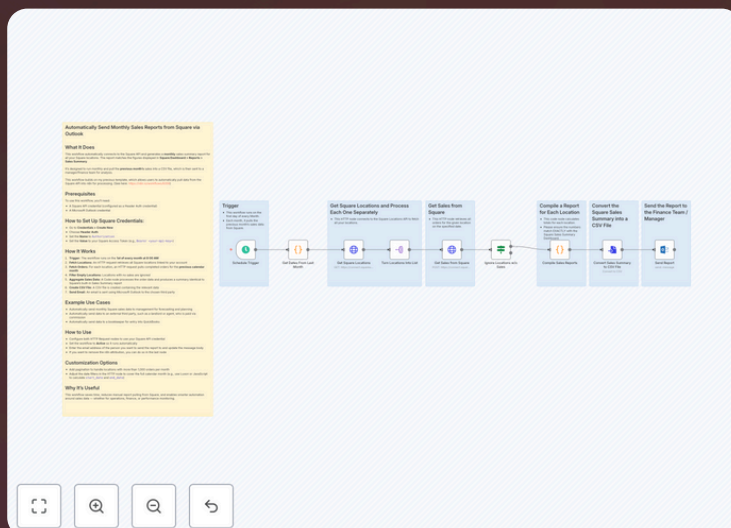

This n8n template automates prospect research and personalized follow-up writing right after a sales call is booked. It gathers company background, tech stack, and updates; suggests relevant solutions; and then drafts a handcrafted email, subject line, and SMS, all saved back into Google Sheets.

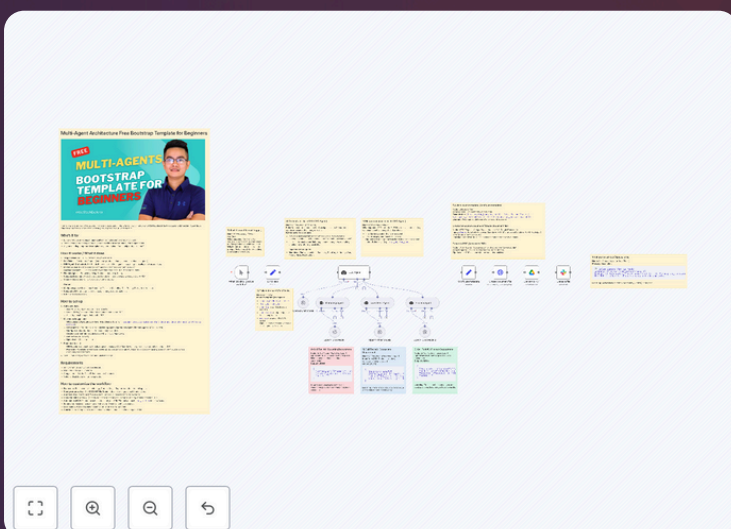

Automatically Send Monthly Sales Reports from Square via Outlook

This workflow automatically connects to the Square API and generates a monthly sales summary report for all your Square locations. The report matches the figures displayed in Square Dashboard > Reports > Sales Summary.

It's designed to run monthly and pull the previous month's sales into a CSV file, which is then sent to a manager/finance team for analysis.

Collaborative Sales Planning with Multi-Agent AI, Google Docs, and Slack

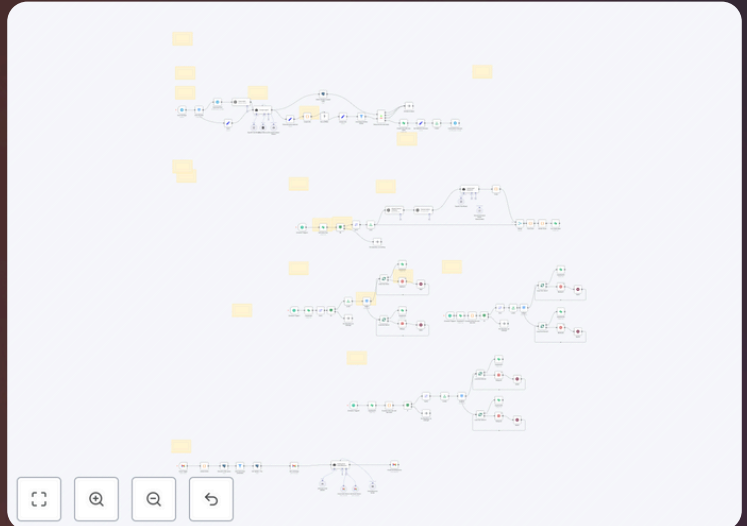

Free template to learn and reuse a multi-agent architecture in n8n. The company metaphor: a CEO (orchestrator) delegates to Marketing, Operations, Finance to produce a short sales-season plan, export it to PDF, and share it.

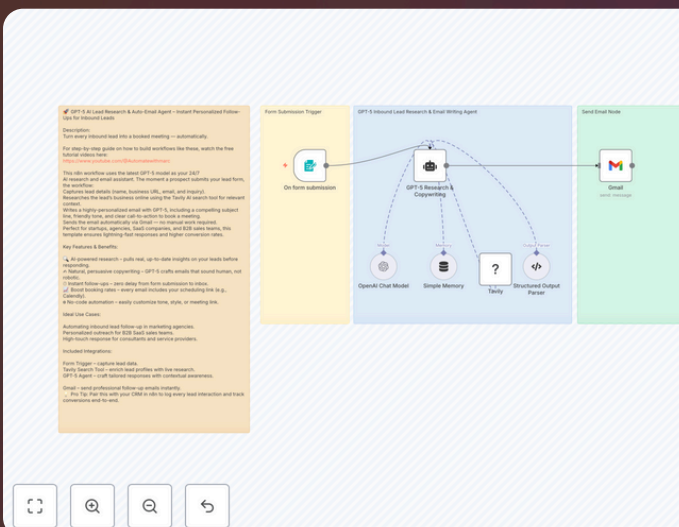

Complete B2B Sales Pipeline: Apollo Lead Gen, Mailgun Outreach & AI Reply Management

Automate your outbound workflow from prospecting to AI-generated reply drafts in Gmail — all fully integrated with your database.

Ideal for SDRs, founders, and growth agencies who want speed, personalization, and control without losing human review.

Automated Sales Follow-up with GPT, Tavily Research and Gmail

This workflow contains community nodes that are only compatible with the self-hosted version of n8n.

GPT-5 AI Lead Research & Auto-Email Agent – Instant Personalized Follow-Ups for Inbound Leads

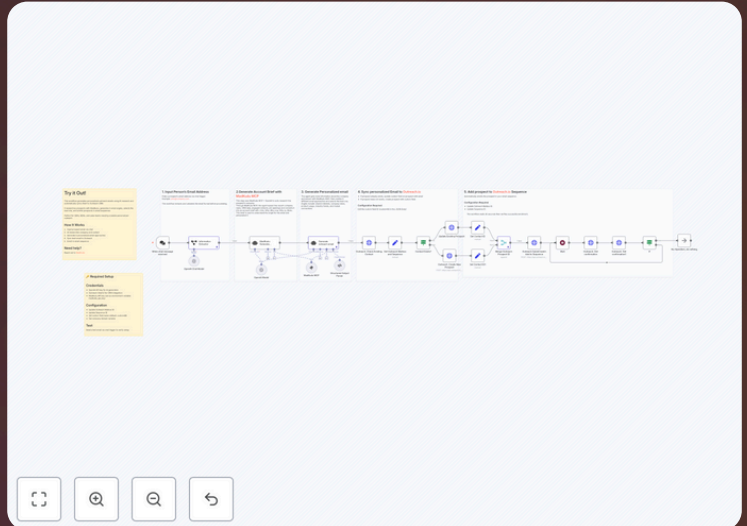

Description:

Turn every inbound lead into a booked meeting — automatically.

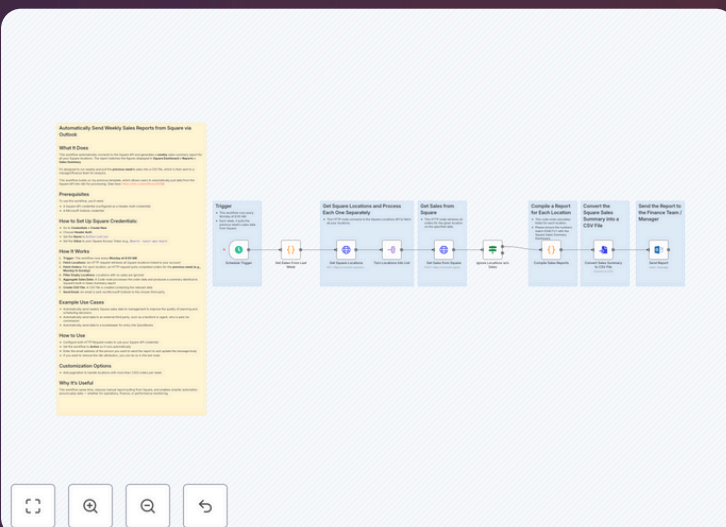

Generate Personalized Sales Emails with MadKudu Research & OpenAI for Outreach.io Sequences

This workflow researches prospects using MadKudu MCP, generates personalized emails with OpenAI, and syncs them to Outreach with automatic sequence enrollment.

Its for SDRs and sales teams who want to scale personalized outreach by automating research and email generation while maintaining quality.

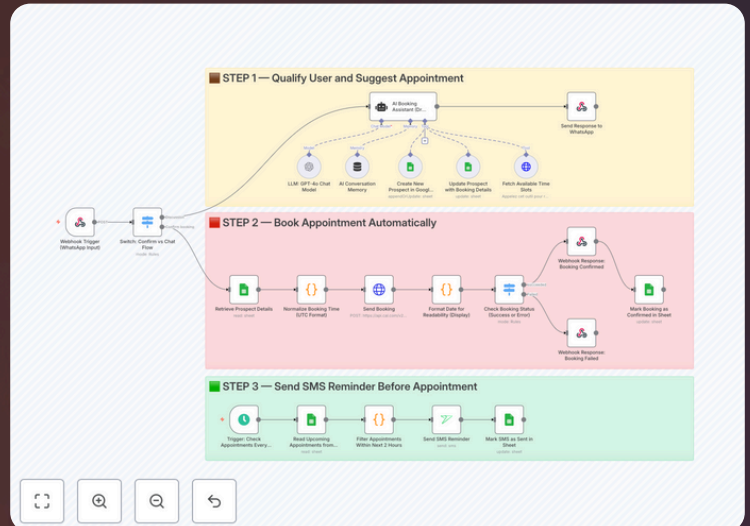

Automatically Send Weekly Sales Reports from Square via Outlook

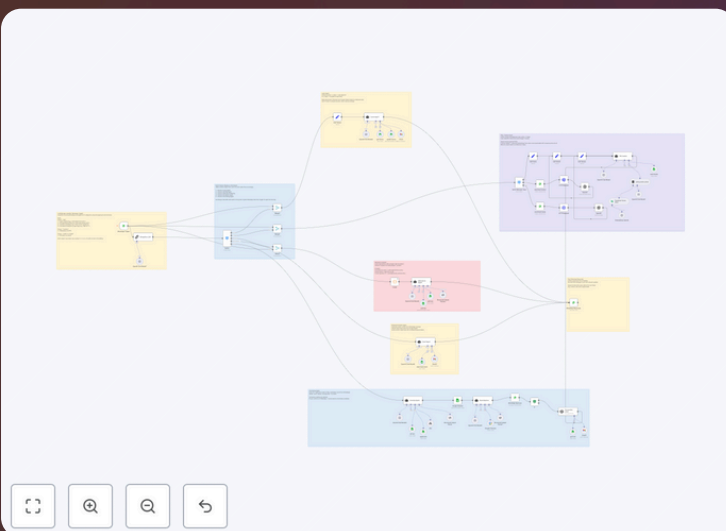

This workflow automatically connects to the Square API and generates a weekly sales summary report for all your Square locations. The report matches the figures displayed in Square Dashboard > Reports > Sales Summary.

Angie, Personal AI Assistant with Telegram Voice and Text

This project creates a personal AI assistant named Angie that operates through Telegram. Angie can summarize daily emails, look up calendar entries, remind users of upcoming tasks, and retrieve contact information. The assistant can interact with users via both voice and text inputs.

Chat with local LLMs using n8n and Ollama

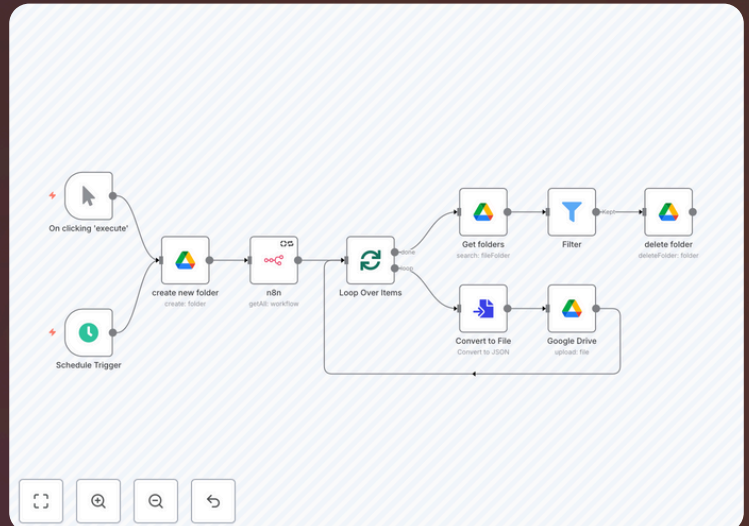

This n8n workflow allows you to seamlessly interact with your self-hosted Large Language Models (LLMs) through a user-friendly chat interface. By connecting to Ollama, a powerful tool for managing local LLMs, you can send prompts and receive AI-generated responses directly within n8n.

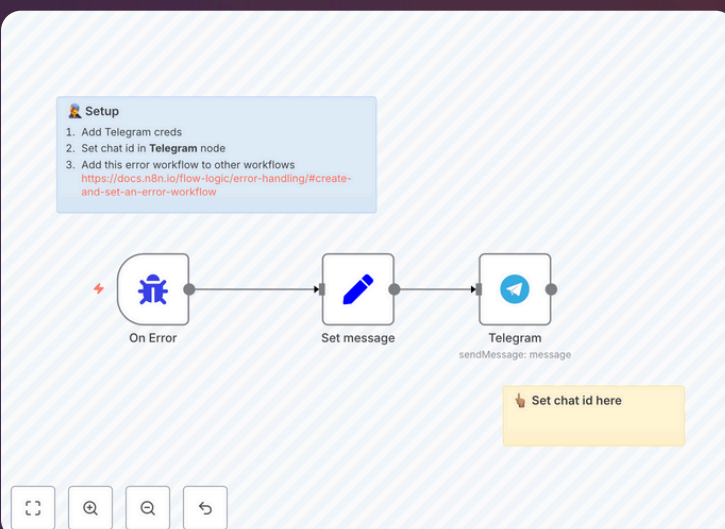

Backup all n8n workflows to Google Drive every 4 hours

This workflow takes off the task of backing up workflows regularly on Github and uses Google Drive as the main tool to host these.

This can be a good way to keep track of your workflows so that you never lose any workflows in case your n8n goes down.

Report n8n workflow errors to Telegram

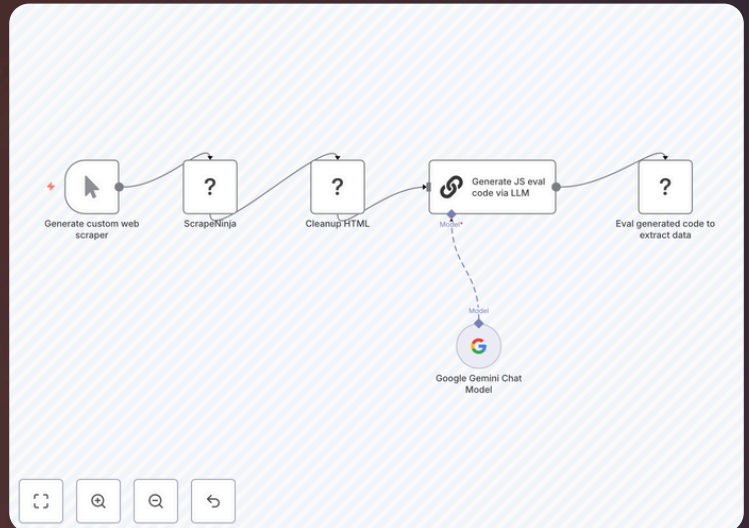

Error workflows are an important part of running workflows in production. Make sure to set them up for all your important workflows. The message links directly to the execution.

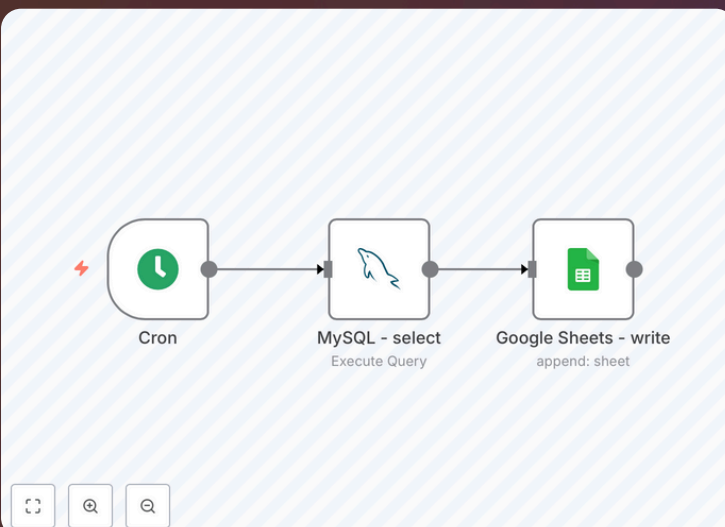

Scrape any web page into structured JSON data with ScrapeNinja and AI

This workflow leverages ScrapeNinja n8n community node to:

- scrape webpage HTML,
- feed it into LLM (Google Gemini) and ask to write a JS extractor function code, then it
- executes the written JS extractor against scraped HTML to extract useful data from webpage (the code is safely executed in a sandbox)

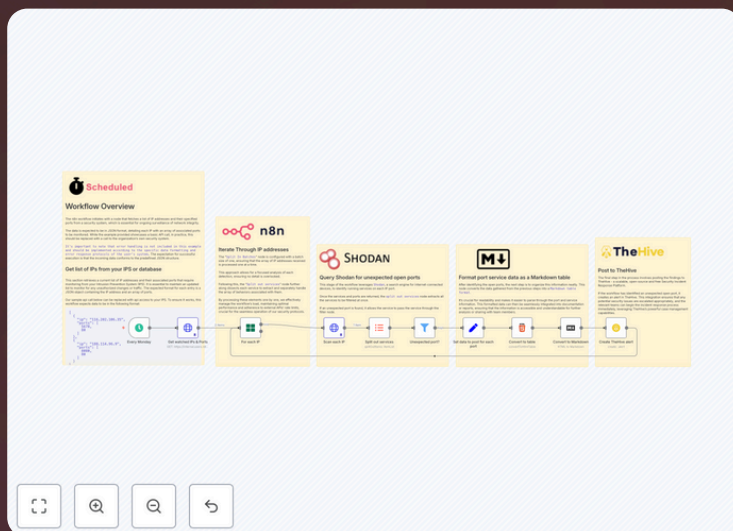

Import data from MySQL into Google Sheets

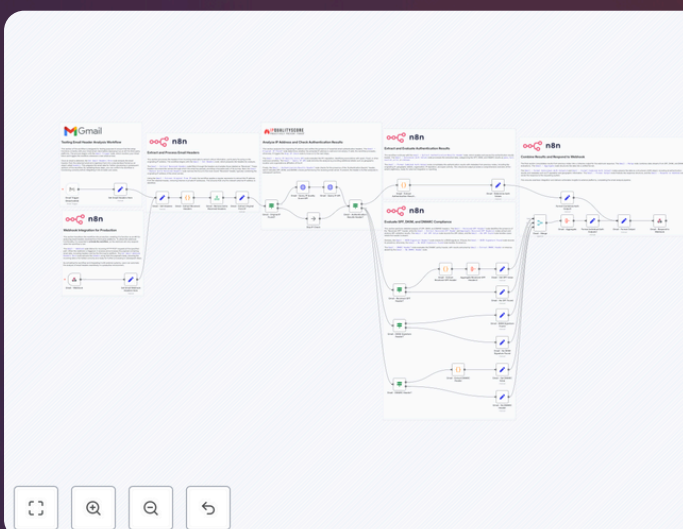

This workflow queries a table in MySQL and inserts the data into Google Sheets.

Weekly Shodan Query - Report Accidents

This n8n workflow, which runs every Monday at 5:00 AM, initiates a comprehensive process to monitor and analyze network security by scrutinizing IP addresses and their associated ports. It begins by fetching a list of watched IP addresses and expected ports through an HTTP request. Each IP address is then processed in a sequential loop.

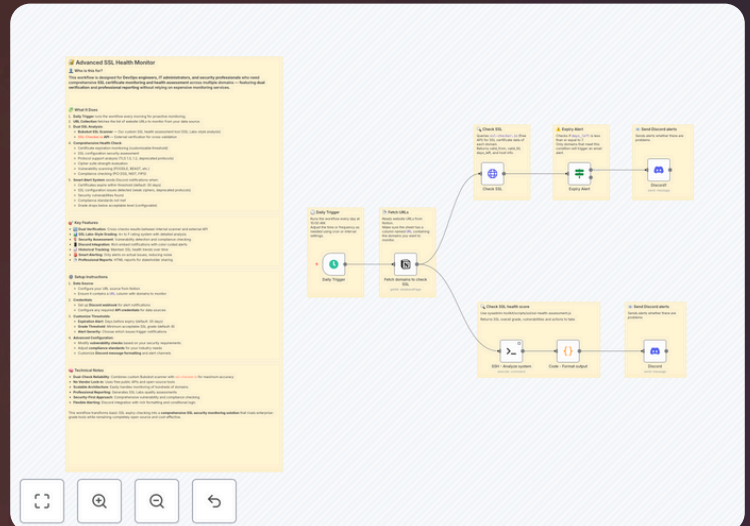

Analyze Email Headers for IP Reputation and Spoofing Detection - Gmail

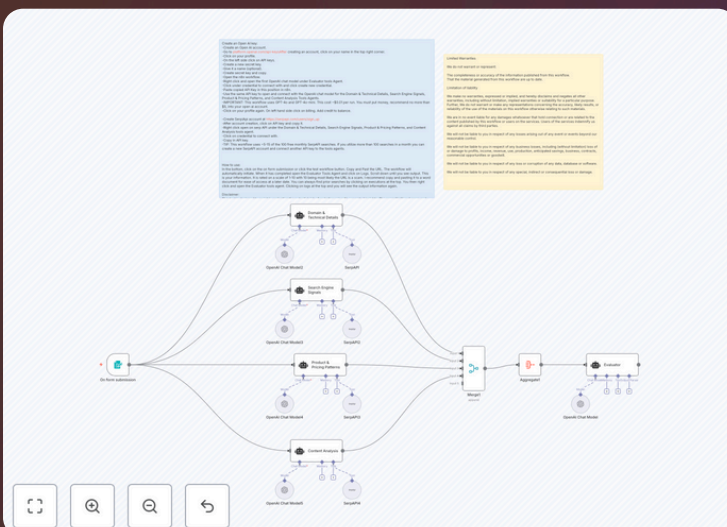

This workflow is ideal for IT professionals, security analysts, and organizations looking to enhance their email security practices. It is particularly useful for those who need to analyze Gmail email headers for IP tracking, spoofing detection, and sender reputation assessment.

Comprehensive SSL Certificate Monitoring with Discord Alerts and Notion Integration

This workflow is designed for DevOps engineers, IT administrators, and security professionals who need comprehensive SSL certificate monitoring and health assessment across multiple domains — featuring dual verification and professional reporting without relying on expensive monitoring services.

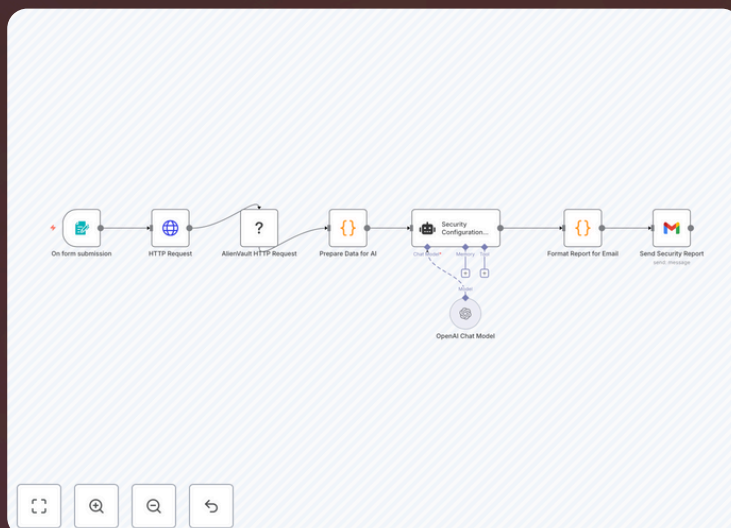

Website Scam Risk Detector with GPT-4o and SerpAPI

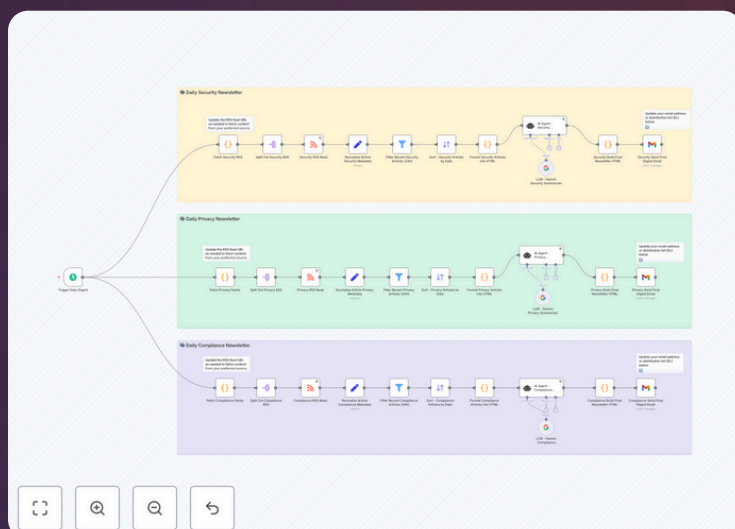

This intelligent workflow simplifies the complex task of determining whether a website is legitimate or potentially a scam. By simply submitting a URL through a form, the system initiates a multi-agent evaluation process. Four dedicated AI agents—each powered by GPT-4o and connected to SerpAPI—analyze different dimensions of the website: domain and technical details, search engine signals, product and pricing patterns, and on-site content analysis.

OTX & OpenAI Web Security Check

This n8n workflow automates website security audits. It combines direct website scanning, threat intelligence from AlienVault OTX, and advanced analysis from an OpenAI large language model (LLM) to generate and email a comprehensive security report.

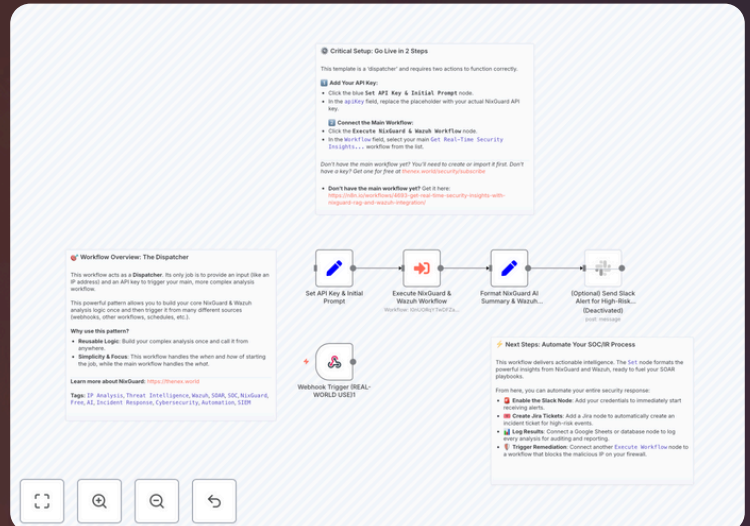

Intelligent AI Digest for Security, Privacy, and Compliance Feeds

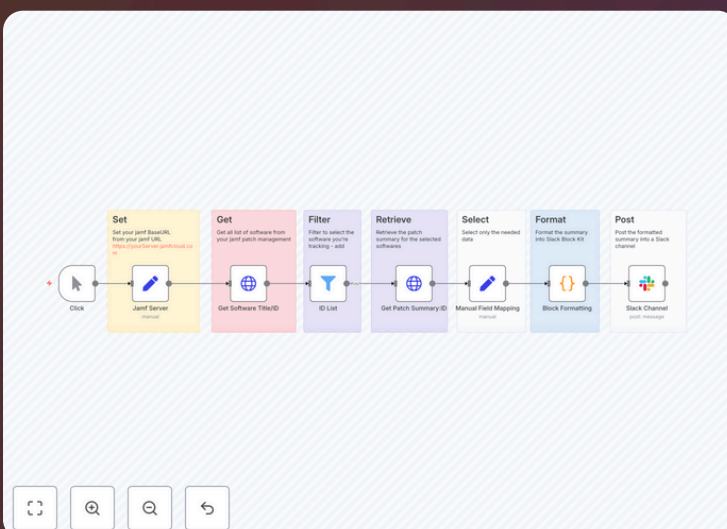

This workflow acts like your own personal AI assistant, automatically fetching and summarizing the most relevant Security, Privacy, and Compliance news from curated RSS feeds. It processes only the latest articles (past 24 hours), organizes them by category, summarizes key insights using AI, and delivers a clean HTML digest straight to your inbox—saving you time every day.

Automated URL Phishing & Threat Analysis with NixGuard AI

Stop manually checking suspicious links. This free n8n workflow provides the foundation for a powerful, automated URL analysis pipeline. Using the NixGuard AI engine, you can instantly analyze suspicious URLs from emails, logs, or tickets to uncover phishing attempts, malware hosting sites, and malicious redirects.

Monitor Software Compliance with Jamf Patch Summaries in Slack

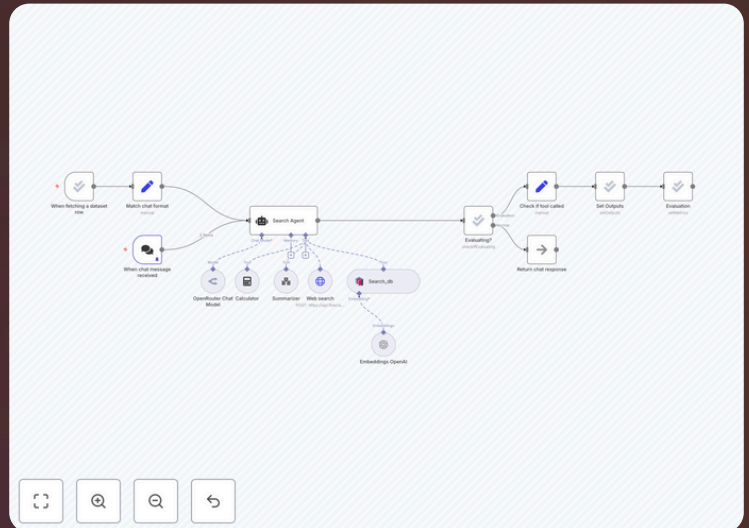

Stay on top of software patch compliance by automatically posting Jamf patch summaries to Slack.

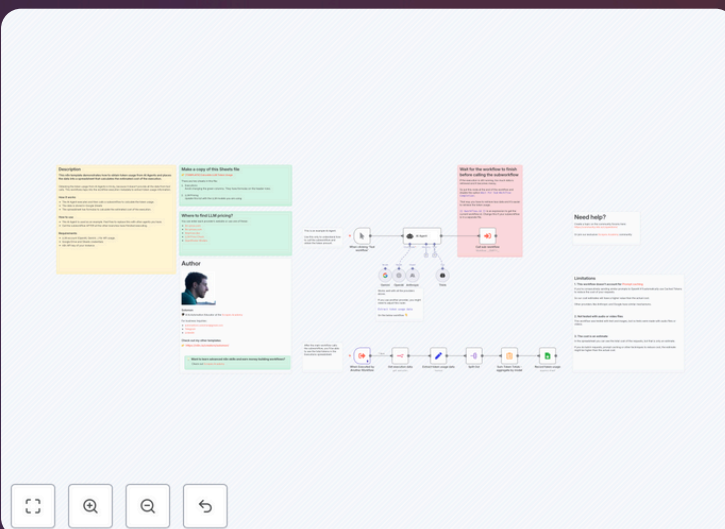

This helps IT and security teams quickly identify outdated installs and take action—without logging into Jamf.

Evaluate tool usage accuracy in multi-agent AI workflows using Evaluation nodes

This workflow is ideal for AI developers running multi-agent systems in n8n who need to quantitatively evaluate tool usage behavior. If you're building autonomous agents and want to verify their decisions against ground-truth expectations, this workflow gives you plug-and-play observability.

Track AI Agent token usage and estimate costs in Google Sheets

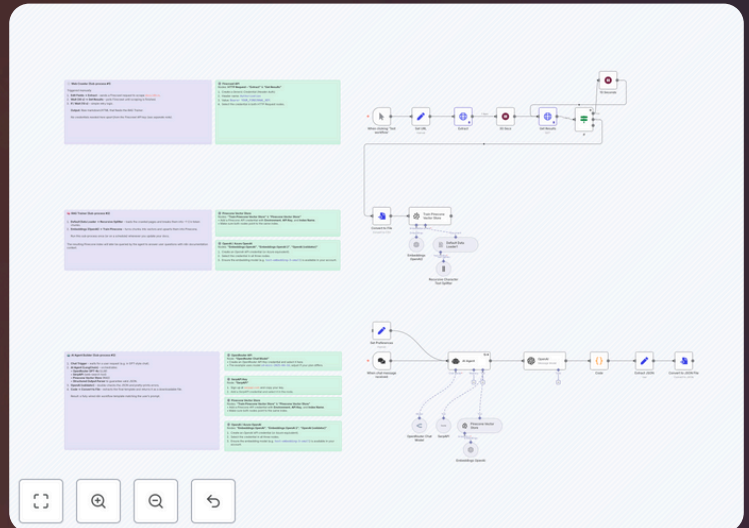

This n8n template demonstrates how to obtain token usage from AI Agents and places the data into a spreadsheet that calculates the estimated cost of the execution. Obtaining the token usage from AI Agents is tricky, because it doesn't provide all the data from tool calls. This workflow taps into the workflow execution metadata to extract token usage information.

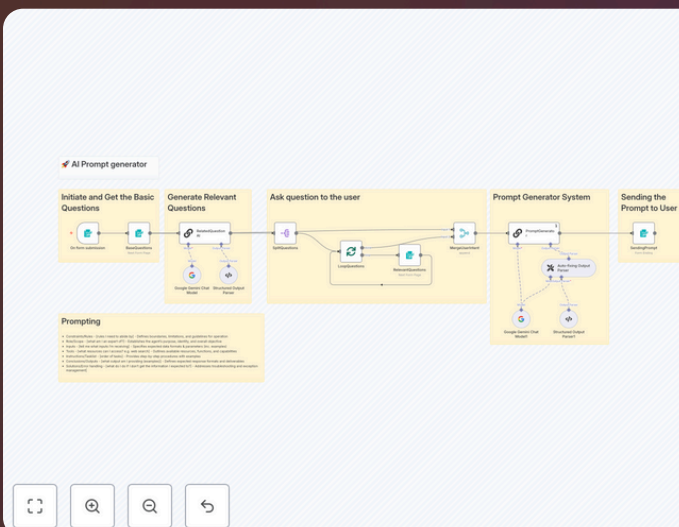

Build Custom Workflows Automatically with GPT-4o, RAG, and Web Search

Need to turn a one-line chat request into a fully-wired n8n workflow template—complete with AI agents, RAG, and web-search super-powers—without lifting a finger?

That's exactly what Agent Builder automates: Listens to any incoming chat message (via the Chat Trigger).

AI Prompt Generator Workflow

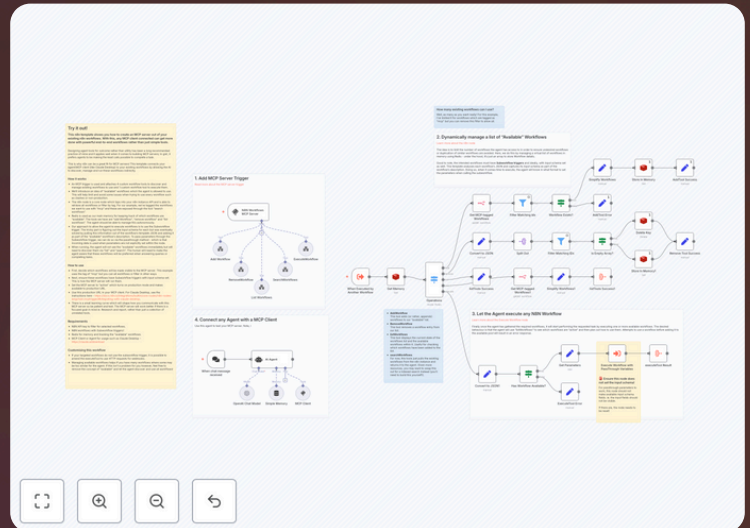

This workflow is for AI builders, prompt engineers, developers, marketers, and no-code creators who want to convert rough user input into structured, high-quality prompts for LLMs. It's especially useful for tools that rely on precision prompting and want to automate the discovery of intent and constraints.

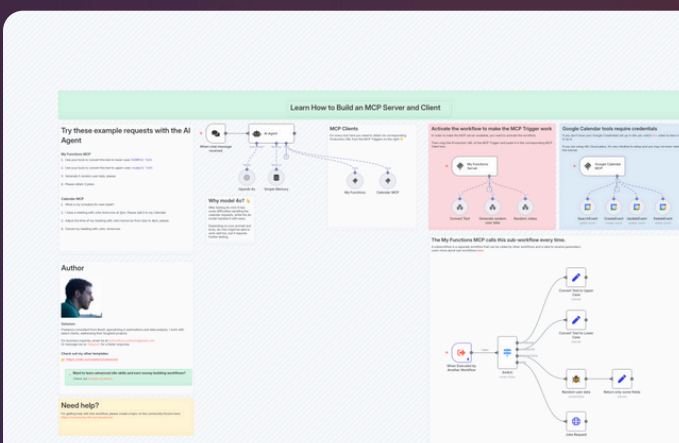

Build your own N8N Workflows

MCP Server

This n8n template shows you how to create an MCP server out of your existing n8n workflows. With this, any MCP client connected can get more done with powerful end-to-end workflows rather than just simple tools.

Build an MCP Server with Google Calendar and Custom Functions

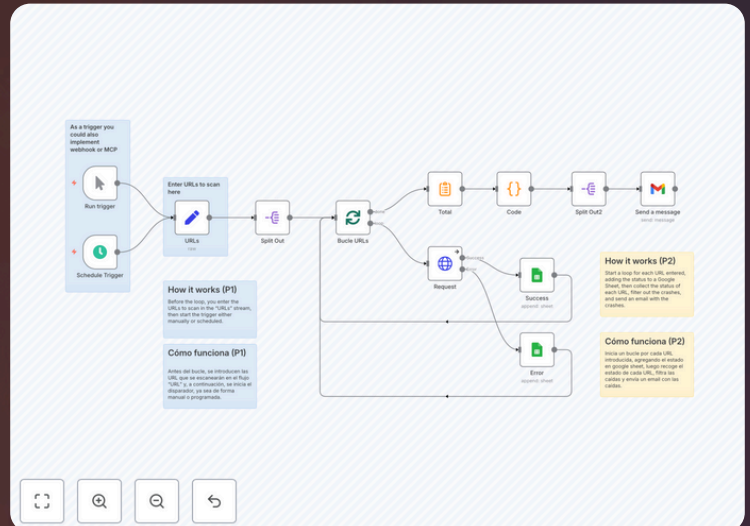

The AI Agent connects to two MCP Servers. Each MCP Trigger (Server) generates a URL exposing its tools. This URL is used by an MCP Client linked to the AI Agent.

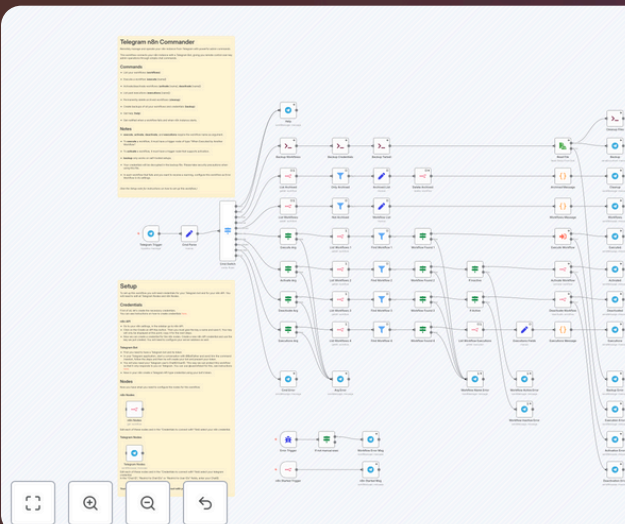

Whenever you make changes to the tools, there's no need to modify the MCP Client. It automatically keeps the AI Agent informed on how to use each tool, even if you change them over time.

Automatic monitoring of multiple URLs with downtime alerts

This n8n workflow allows you to automatically monitor the status of multiple URLs in a simple and efficient way. You just need to enter the URLs you want to scan and run the workflow (either manually or scheduled). For each URL, an availability check is performed. The results are logged in a Google Sheet, clearly distinguishing between successful checks and failures (downtime).

Control Your n8n Instance Remotely with Telegram Bot Commands

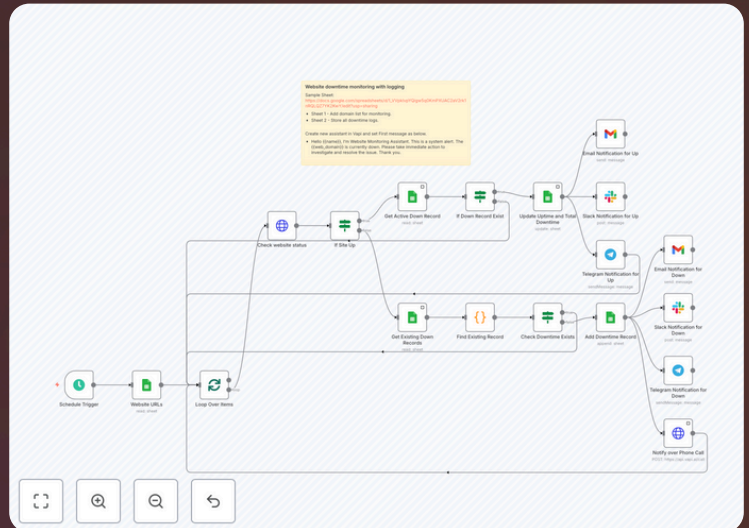

This workflow contains community nodes that are only compatible with the self-hosted version of n8n.

Remotely manage and operate your n8n instance from Telegram with powerful admin commands.

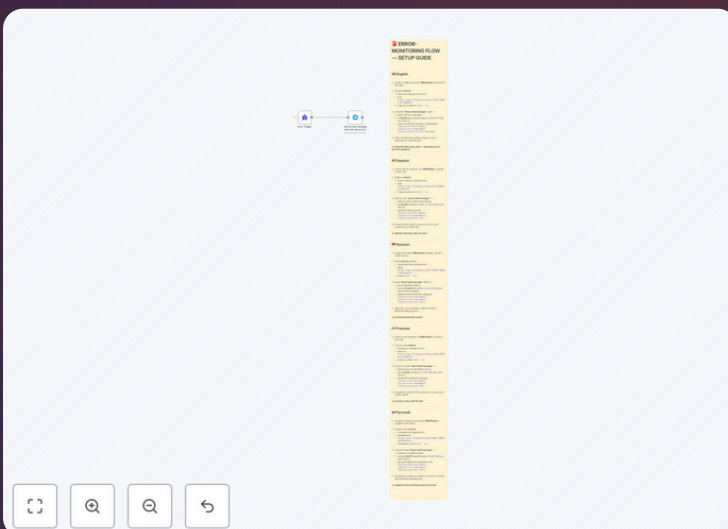

This workflow connects your n8n instance with a Telegram Bot, giving you remote control over key admin operations through simple chat commands.

Multiple Websites Monitoring with Notifications including Phone Calls

Automatically monitor multiple websites every 5 minutes, log downtime, notify your team instantly via multiple channels, and track uptime/downtime in a Google Sheet—without relying on expensive monitoring tools.

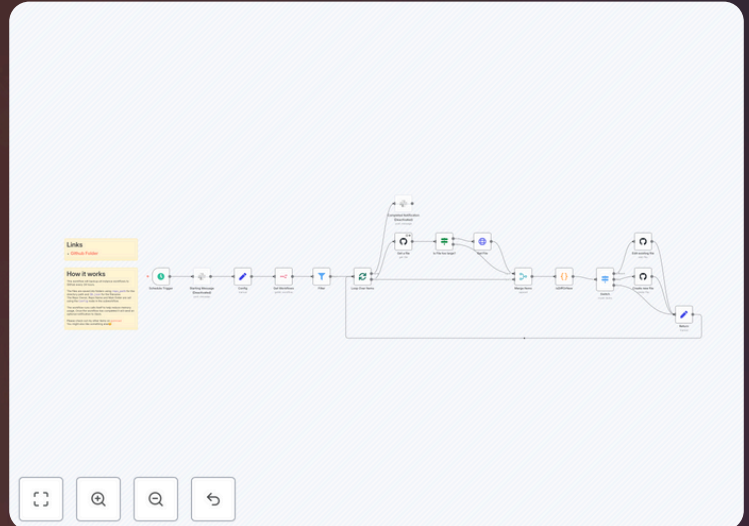

Monitor n8n Workflow Errors with Telegram Alerts (Multi-language Setup)

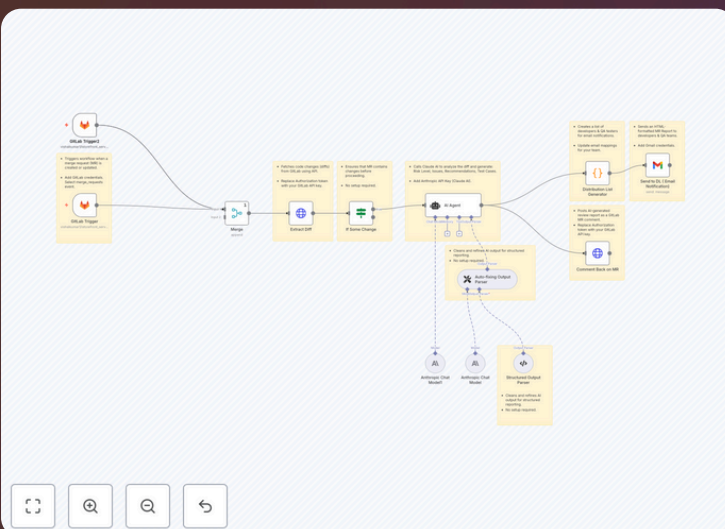

Automatically sends Telegram notifications when any n8n workflow fails. Includes workflow name, error message, and execution ID in the alert.

Daily Workflow Backups to GitHub with Slack Notifications

This workflow is ideal for n8n self-hosted users, DevOps engineers, and automation developers who want to automatically back up their n8n workflows to GitHub on a regular basis.

GitLab Merge Request Review & Risk Analysis with Claude/GPT AI

The workflow runs when a GitLab Merge Request (MR) is created or updated.

Extract & Analyze

It retrieves the code diff and sends it to Claude AI or GPT-4o for risk assessment and issue detection.

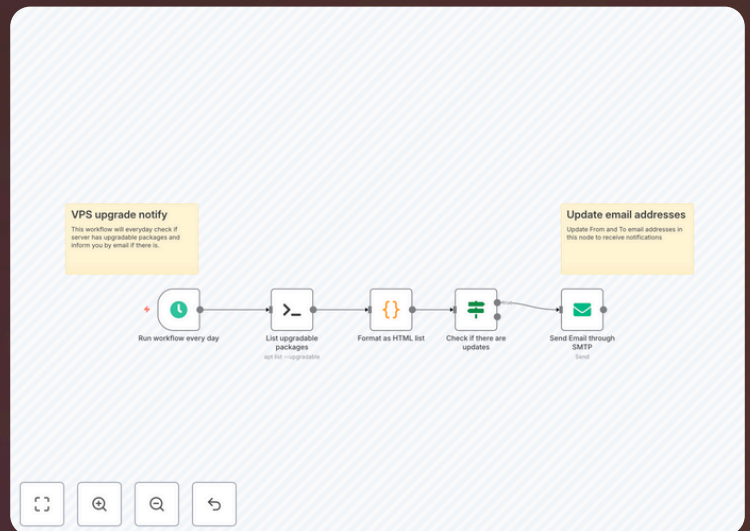

Generate Report

AI produces a structured summary with:

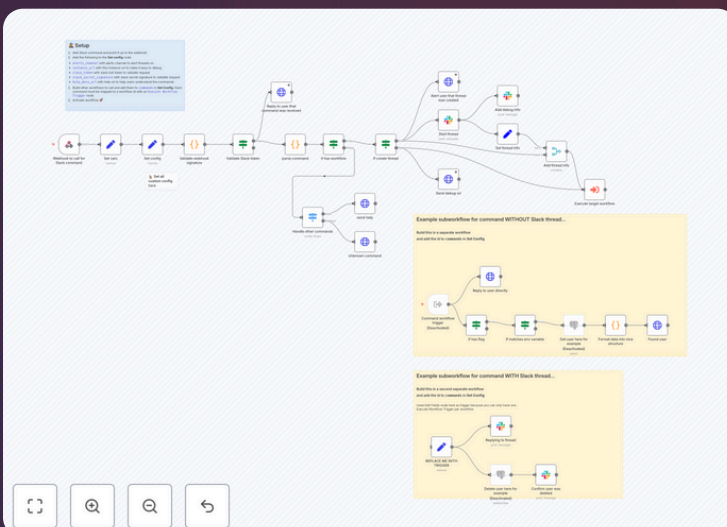

- Risk levels
- Identified issues
- Recommendations
- Test cases

Send Email if server has upgradable packages

This workflow automates the routine check for upgradable packages on your Ubuntu server, ensuring you stay updated with the latest software patches and security improvements. By running a daily script, it efficiently monitors any available package upgrades and promptly notifies you via email, saving you time and enhancing your server's security.

Advanced Slackbot with n8n

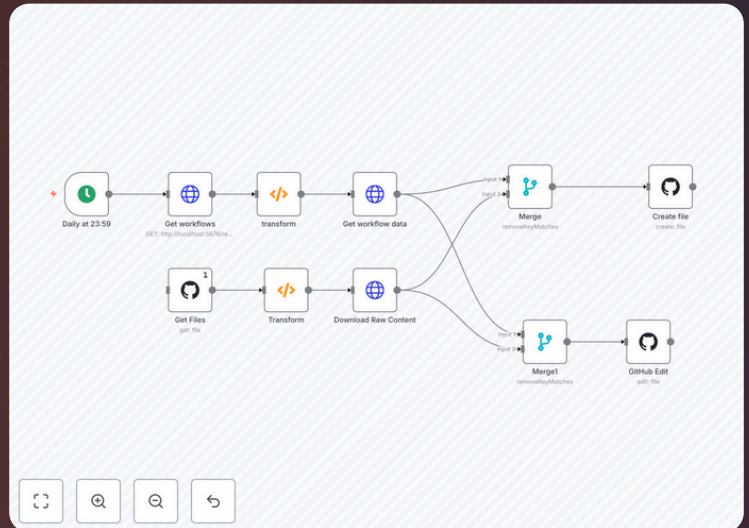

This is the base workflow we use for our most powerful internal Slackbots. They handle a lot from running e2e tests for Github branch to deleting a user. By splitting the workflow into many subworkflows, we are able to handle each command separately, making it easier to debug as well as support new usecases.

Backup workflows to GitHub

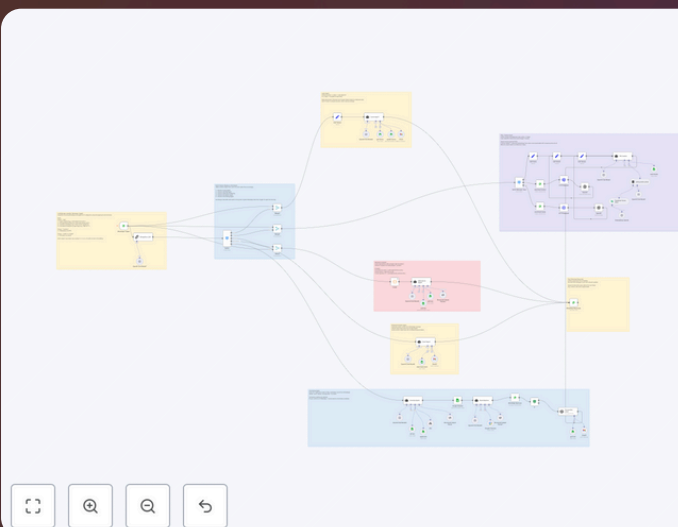

This workflow uses the internal API which is not official. This workflow might break in the future.

The workflow executes every night at 23:59. You can configure a different time bin in the Cron node.

Configure the GitHub nodes with your username, repo name, and the file path. In the HTTP Request nodes (making a request to localhost:5678), create Basic Auth credentials with your n8n instance username and password.

Get a bird's-eye view of your n8n instance with the Workflow Dashboard!

Soar above the limitations of the default n8n dashboard! This template gives you an overview of your workflows, nodes, and tags – all in one place.

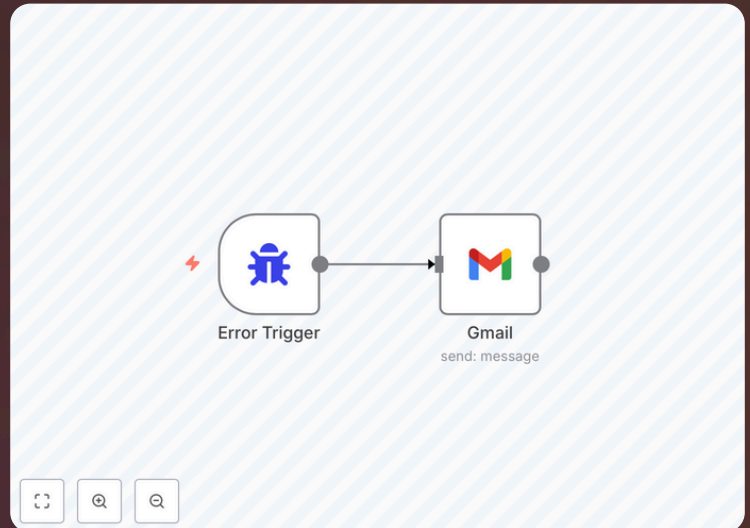

Built using XML stylesheets and the Bootstrap 5 library, this workflow is self-contained and does not depend on any third-party software. It generates a comprehensive overview JSON that can be easily integrated with other BI tools for further analysis and visualization.

Send email via Gmail on workflow error

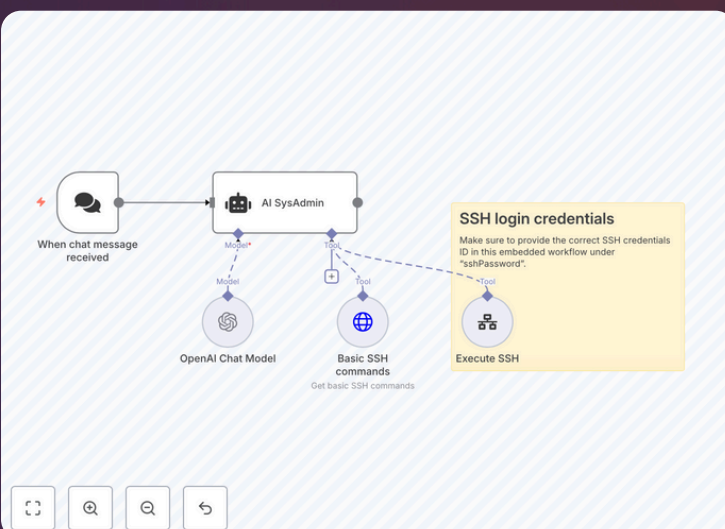

Send an email via Gmail when a workflow error occurs.

The email subject line will contain the workflow name; the message body will contain the following information:

- Workflow name
- Error message
- Last node executed
- Execution URL
- Stacktrace

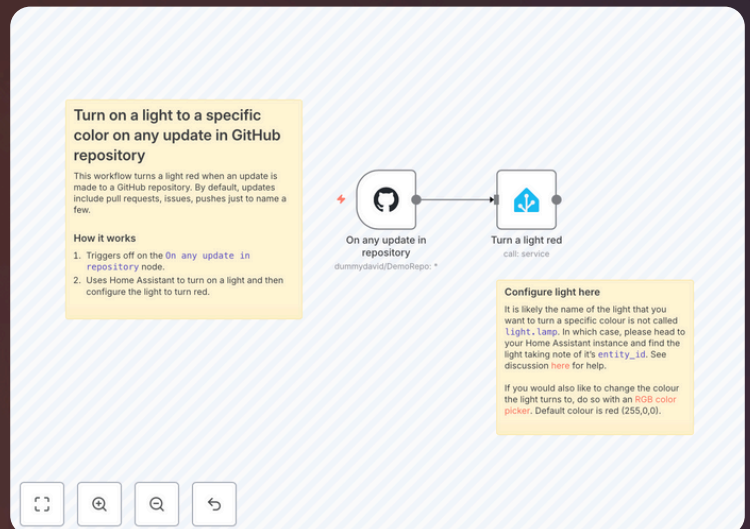

AI Linux system administrator for managing Linux VPS instance

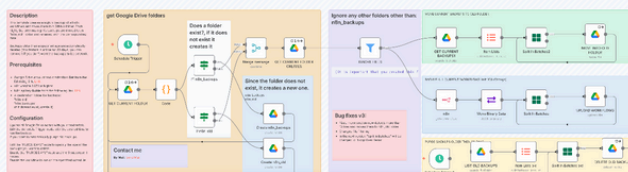

This n8n workflow template is designed for developers, system administrators, and IT professionals who manage Linux VPS environments. It leverages an AI chatbot powered by the OpenAI model to interpret and execute SSH commands on a Linux VPS directly from chat messages.

Turn on a light to a specific color on any update in GitHub repository

This workflow turns a light red when an update is made to a GitHub repository. By default, updates include pull requests, issues, pushes just to name a few.

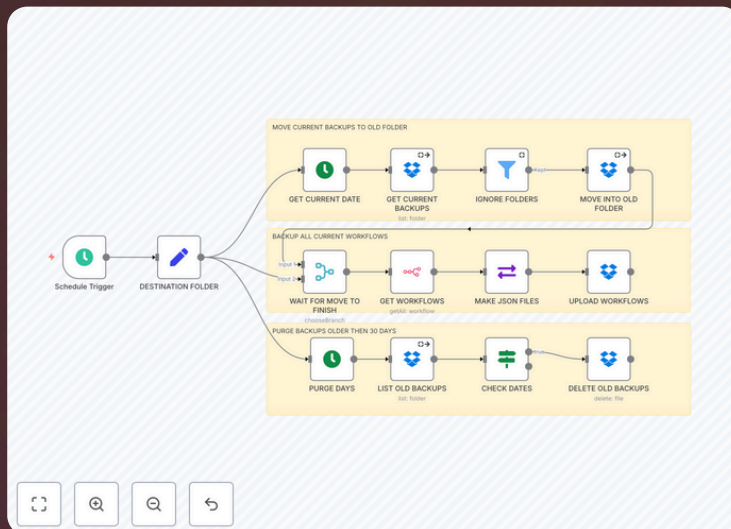

Nightly n8n backup to Google Drive

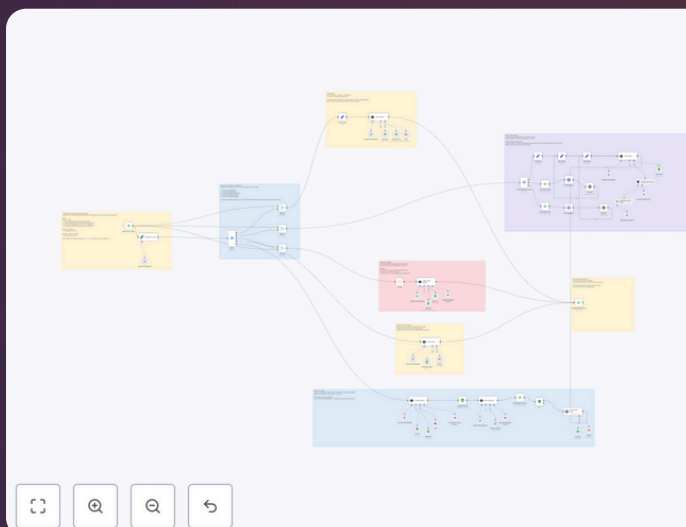

This template creates a nightly backup of all n8n workflows and saves them to a Google Drive folder. Each night, the previous night's backups are moved to an "n8n_old" folder and renamed with the corresponding date.

Nightly n8n backup to Dropbox

This template will create a nightly backup of all your n8n workflows to a Dropbox folder. Each night, the previous night's backups are moved into an "old" folder, and renamed with the date they were taken.

Monitor Multiple Github Repos via Webhook

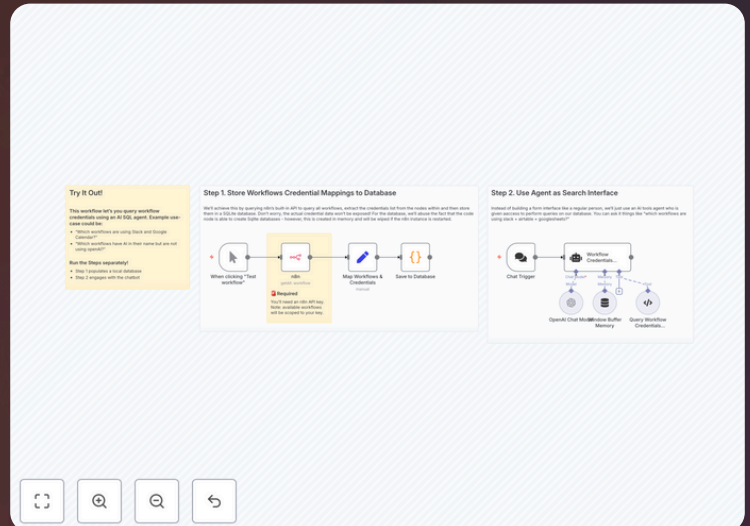

This workflow allows you to monitor multiple Github repos simultaneously without polling due to use of Webhooks. It programmatically allows for adding and deleting of repos to your watchlist to make management convenient.

Query n8n Credentials with AI SQL Agent

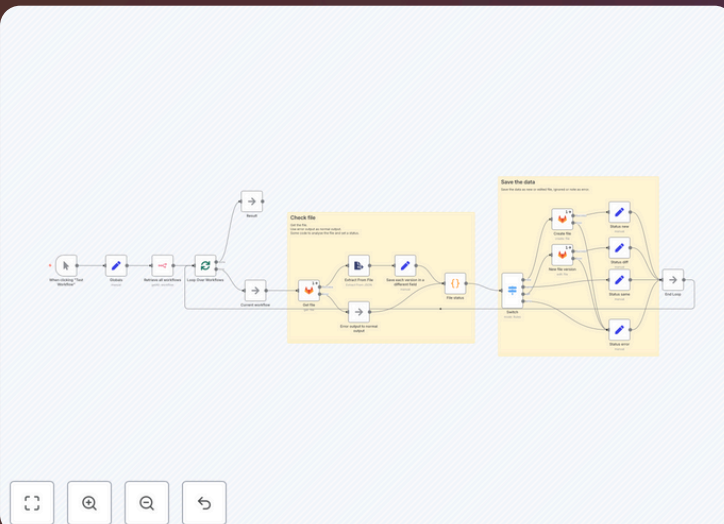

Using the n8n API, it fetches all workflow data on the instance. Workflow data contains references to credentials used so this will be extracted.

With some necessary reformatting, the workflows and their credentials metadata are stored to a SQLite database.

Next, an AI agent is used with a custom SQL tool that reads the SQLite database created in the previous step.

Save your workflows into a Gitlab repository

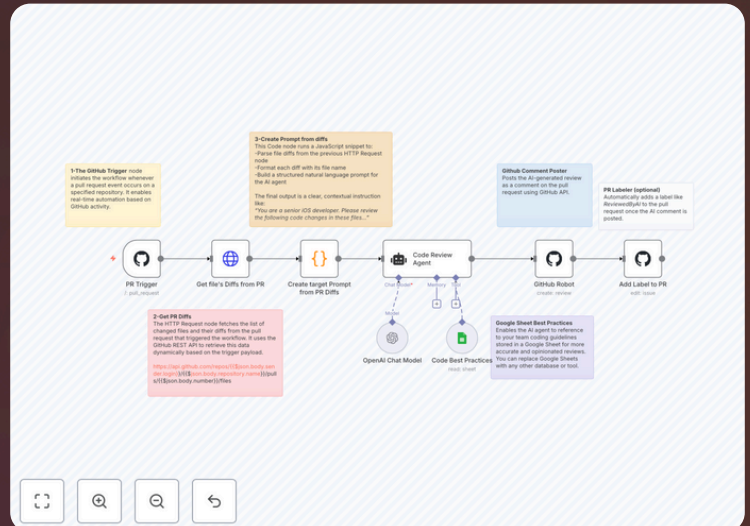

This n8n the workflow does :

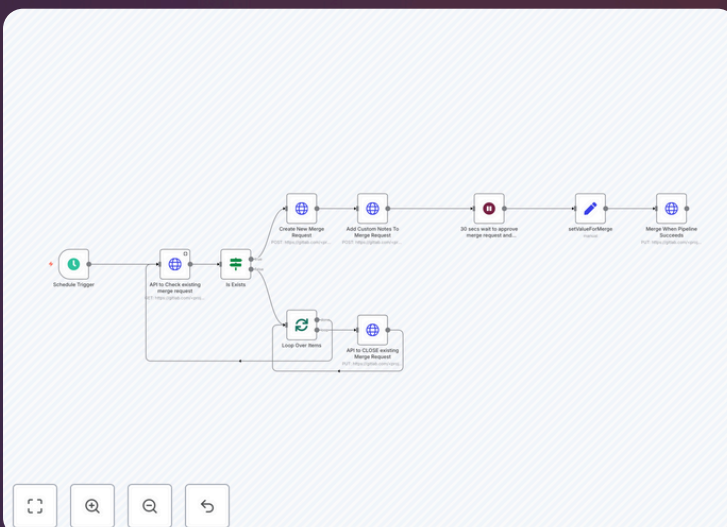

1. Sets custom parameters
2. Gets workflows
3. Iterates through each workflow one by one
 - a. Get the file from Gitlab if exists
 - b. Compare the files as objects (not as strings)
 - c. Return a status on the workflow
4. Create, Edit or ignore the file depending on the status
5. Return a list of status for each workflow

Automated PR Code Reviews with GitHub, GPT-4, and Google Sheets Best Practices

This n8n workflow automates the process of reviewing code changes in GitHub pull requests using an OpenAI-powered agent. It connects your GitHub repo, extracts modified files, analyzes diffs, and uses an AI agent to generate a code review based on your internal code best practices (fed from a Google Sheet).

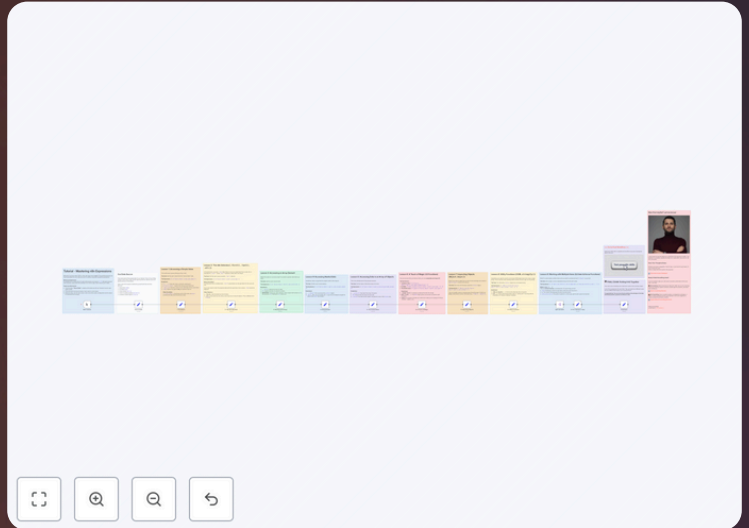

Automate GitLab Merge Requests Using APIs with n8n

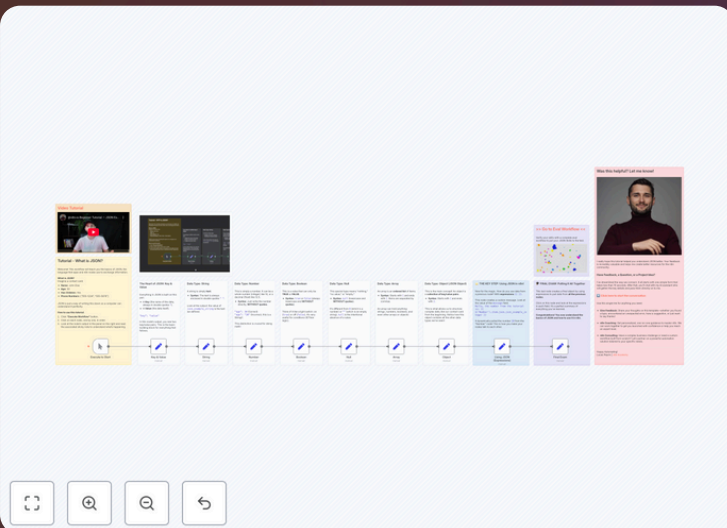

This template is designed for developers, DevOps engineers, and automation enthusiasts who want to streamline their GitLab merge request process using n8n, a low-code workflow automation tool. It eliminates manual intervention by automating the merging of GitLab branches through API calls.

Learn n8n Expressions with an Interactive Step-by-Step Tutorial for Beginners

This template is an interactive, step-by-step tutorial designed to teach you the most important skill in n8n: using expressions to access and manipulate data. If you know what JSON is but aren't sure how to pull a specific piece of information from one node and use it in another, this workflow is for you.

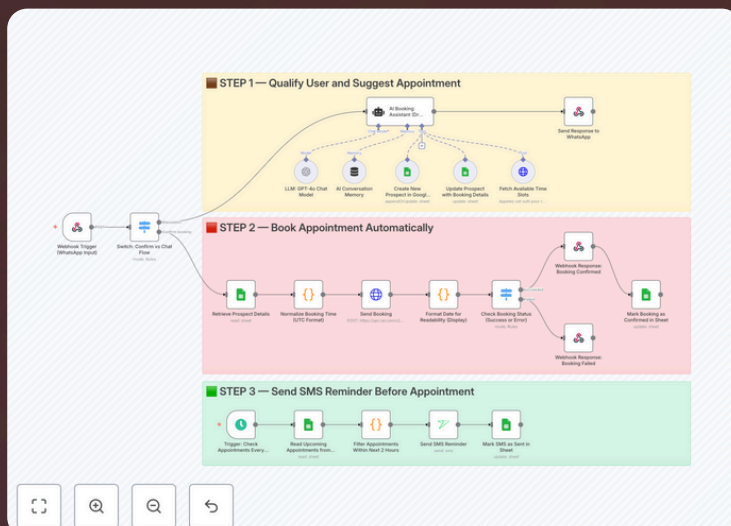

Learn JSON Basics with an Interactive Step-by-Step Tutorial for Beginners

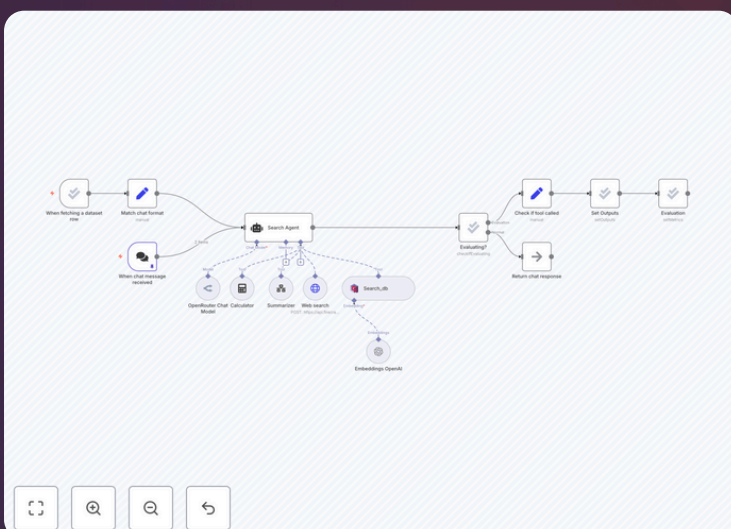

This workflow is an interactive, hands-on tutorial designed to teach you the absolute basics of JSON (JavaScript Object Notation) and, more importantly, how to use it within n8n. It's perfect for beginners who are new to automation and data structures.

Learn Workflow Logic with Merge, IF & Switch Operations

Ever wonder how to make your workflows smarter? How to handle different types of data in different ways? This template is a hands-on tutorial that teaches you the three most fundamental nodes for controlling the flow of your automations: Merge, IF, and Switch.

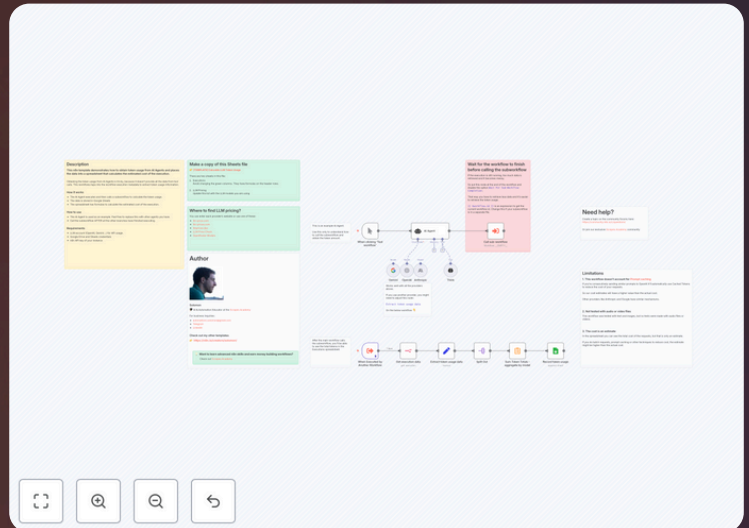

Evaluate tool usage accuracy in multi-agent AI workflows using Evaluation nodes

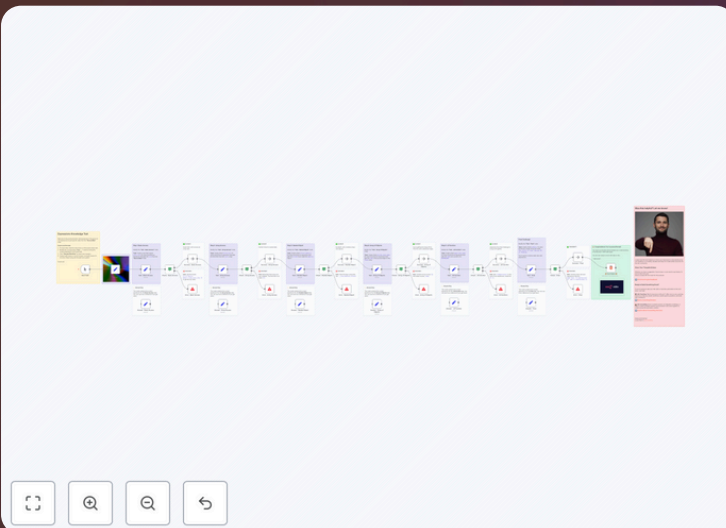

This workflow is ideal for AI developers running multi-agent systems in n8n who need to quantitatively evaluate tool usage behavior. If you're building autonomous agents and want to verify their decisions against ground-truth expectations, this workflow gives you plug-and-play observability.

Track AI Agent token usage and estimate costs in Google Sheets

This n8n template demonstrates how to obtain token usage from AI Agents and places the data into a spreadsheet that calculates the estimated cost of the execution. Obtaining the token usage from AI Agents is tricky, because it doesn't provide all the data from tool calls. This workflow taps into the workflow execution metadata to extract token usage information.

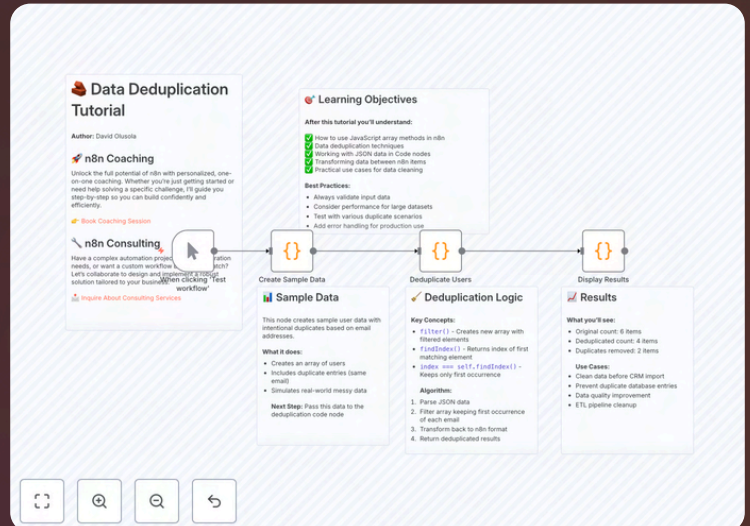

Test Your Data Access Techniques with Progressive Expression Challenges

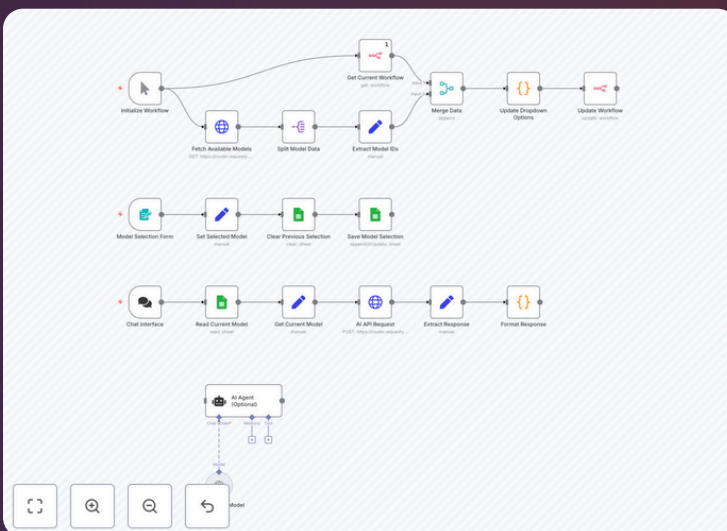

This template is a hands-on, practical exam designed to help you master n8n Expressions—the key to accessing and manipulating data in your workflows. If the Expressions Tutorial Template was the theory lesson, this is the practical driving test. You'll learn how to navigate through complex data structures to get the exact piece of information you need. All challenges will reference a single "Source Data" node, which acts as our data "map".

Deduplicate Data Records Using JavaScript Array Methods

This tutorial demonstrates how to remove duplicate records from a dataset using JavaScript logic inside n8n's Code nodes. It simulates real-world data cleaning by generating sample user data with intentional duplicates (based on email addresses) and walks you through the process of deduplication step-by-step.

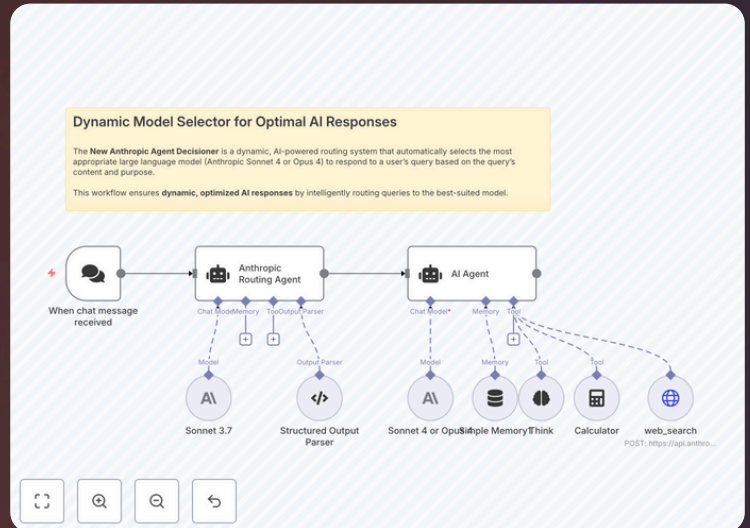

Dynamic AI Model Selector with GDPR Compliance via Requesty and Google Sheets

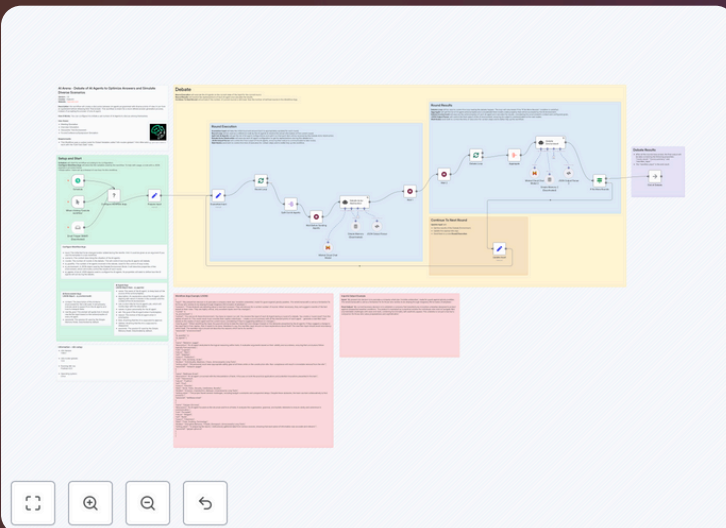

This comprehensive n8n workflow provides a sophisticated solution for dynamically selecting and using AI models while maintaining GDPR compliance. It leverages Requesty's European-based AI routing service to ensure data privacy and automatically updates available model options based on real-time API availability.

Anthropic AI Agent: Claude Sonnet 4 and Opus 4 with Think and Web Search tool

This workflow dynamically chooses between two new powerful Anthropic models — Claude Opus 4 and Claude Sonnet 4 — to handle user queries, based on their complexity and nature, maintaining scalability and context awareness with Anthropic web search function and Think tool.

Simulate Debates Between AI Agents Using Mistral to Optimize Answers

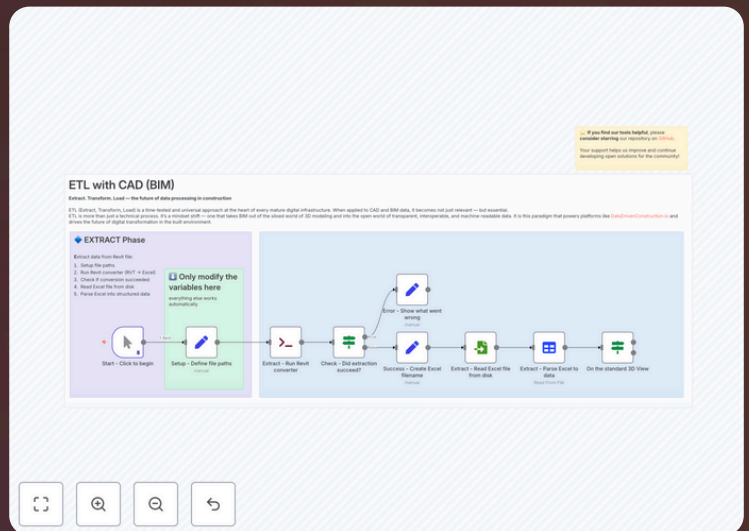

The AI Arena Workflow is designed to facilitate a refined answer generation process by enabling a structured debate among multiple AI agents. This workflow allows for diverse perspectives to be considered before arriving at a final output, enhancing the quality and depth of the generated responses.

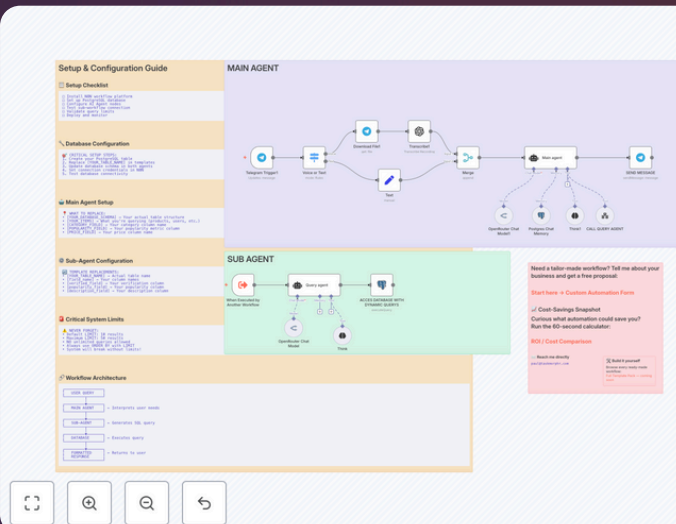

ETL: Extract and Parse Revit Model Data to Structured Excel

Convert a Revit model to Excel and parse it into structured items ready for downstream ETL.

This minimal template runs a local RvtExporter.exe, checks success, derives the expected *_rvt.xlsx filename, reads it from disk, and parses it to data items in n8n.

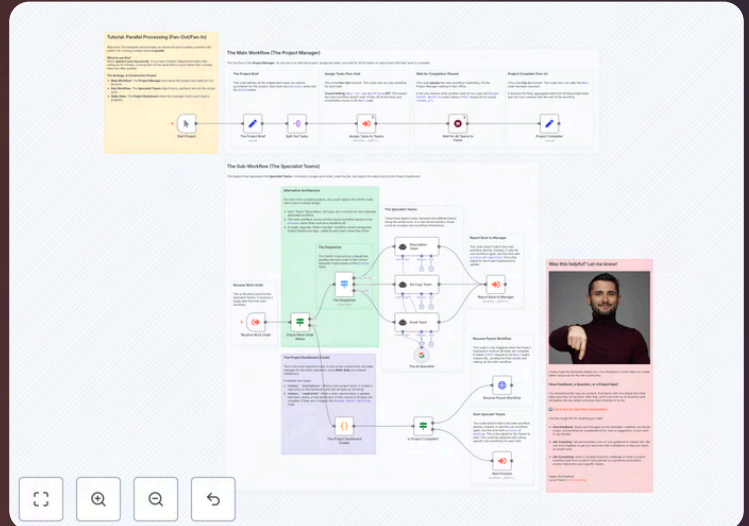

Natural Language Database Queries with Dual-Agent AI & PostgreSQL Integration

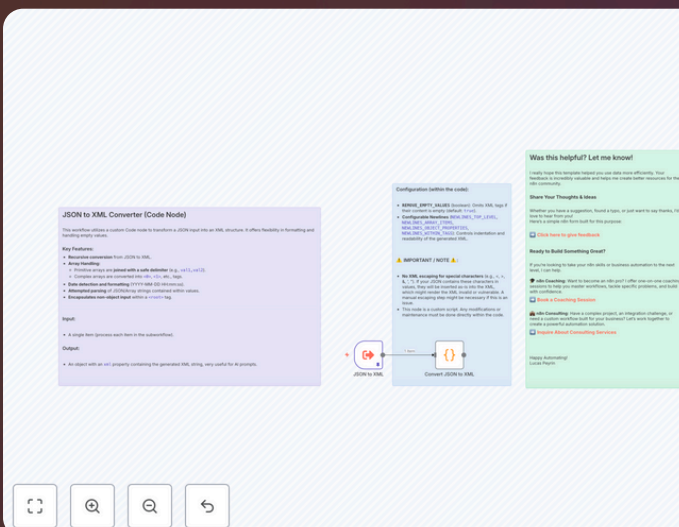

This workflow creates a smart database assistant that safely handles natural language queries without crashing your system. Features dual-agent architecture with built-in query limits and PostgreSQL optimization – perfect for commercial applications!

Optimize Speed-Critical Workflows Using Parallel Processing (Fan-Out/Fan-In)

Use this pattern when speed is your top priority and you have multiple independent, long-running tasks. Instead of running them one after another (which is slow), this workflow runs them all at the same time and waits for them all to finish.

Transform JSON to XML for Enhanced AI Prompt Formatting

This template provides a powerful and configurable utility to convert JSON data into a clean, well-structured XML format. It is designed for developers, data analysts, and n8n users who need to interface with legacy systems, generate structured reports, or prepare data for consumption by Large Language Models (LLMs), which often exhibit improved understanding and parsing with XML-formatted input.

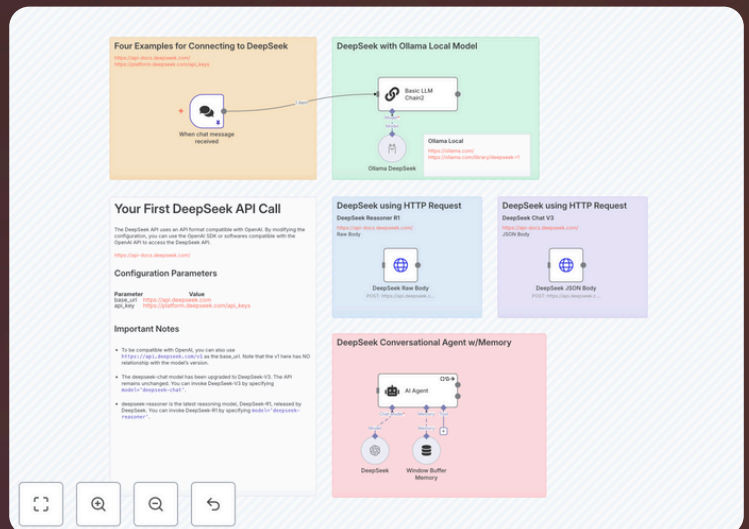

DeepSeek V3 Chat & R1 Reasoning Quick Start

This n8n workflow demonstrates multiple ways to harness DeepSeek's AI models in your automation pipeline!

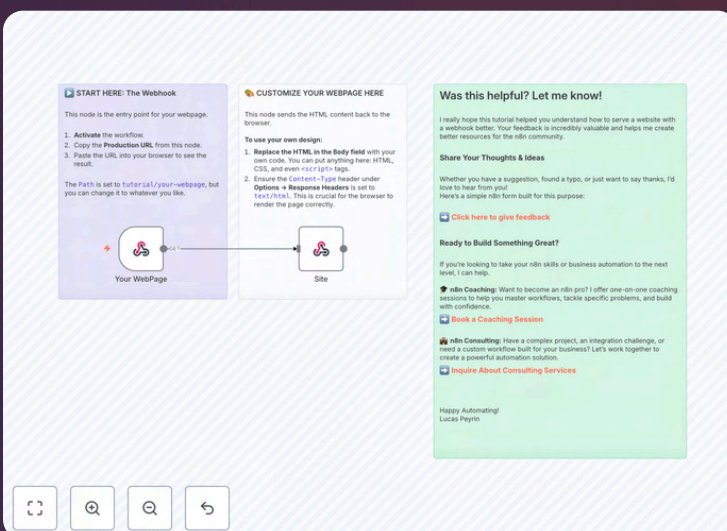

Core Features

Multiple Integration Methods

- Local deployment using Ollama for DeepSeek-R1
- Direct API integration with DeepSeek Chat V3
- Conversational agent with memory buffer
- HTTP request implementation with both raw and JSON formats

Serve Custom Websites (HTML Webpages) with Webhooks

This workflow demonstrates how to use n8n to serve a complete, styled HTML webpage. It acts as a mini web server, responding to browser requests with your custom HTML content.

Create an Offline DIGIPIN Microservice API for Precise Location Mapping in India

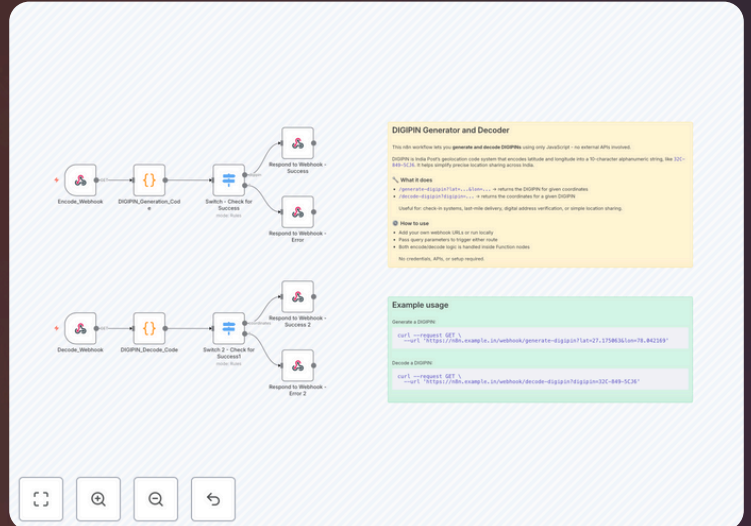

This workflow contains community nodes that are only compatible with the self-hosted version of n8n.

What is DIGIPIN?

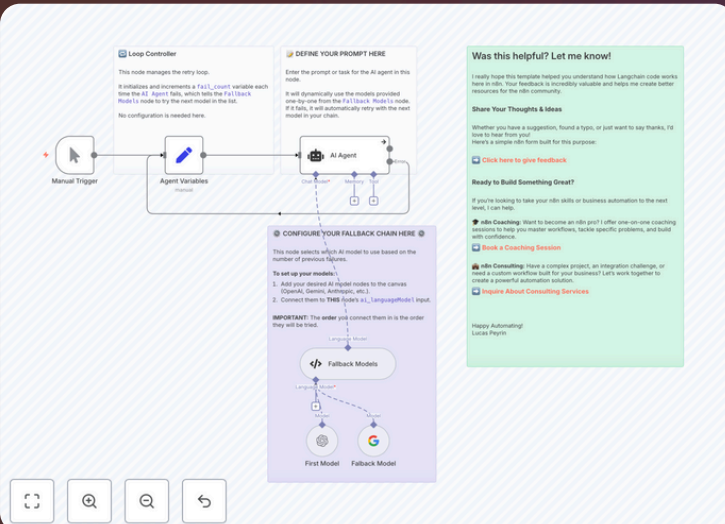

DIGIPIN (Digital Pincode) is a 10-character alphanumeric code introduced by India Post. It maps any 3x3 meter square in India to a unique digital address. This helps precisely locate homes, shops, or landmarks, especially in areas where physical addresses are inconsistent or missing.

What this workflow does

This workflow creates a fully offline DIGIPIN microservice using only JavaScript - no external APIs are used.

Build Resilient AI Workflows with Automatic GPT and Gemini Failover Chain

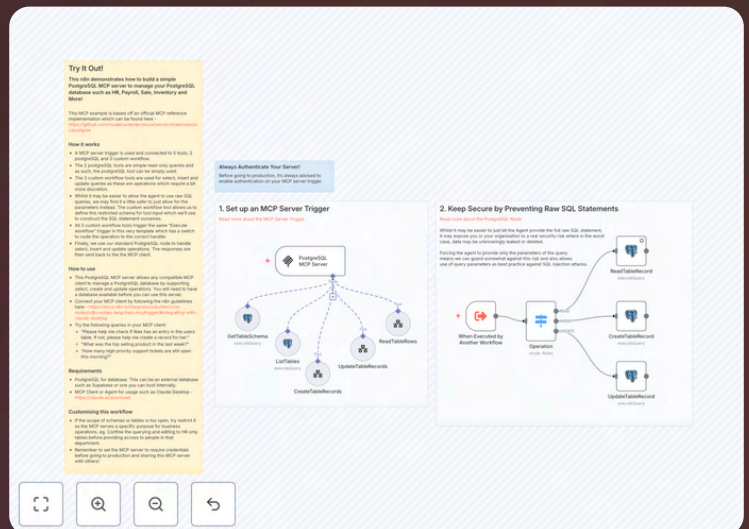

This workflow demonstrates how to create a resilient AI Agent that automatically falls back to a different language model if the primary one fails. This is useful for handling API errors, rate limits, or model outages without interrupting your process.

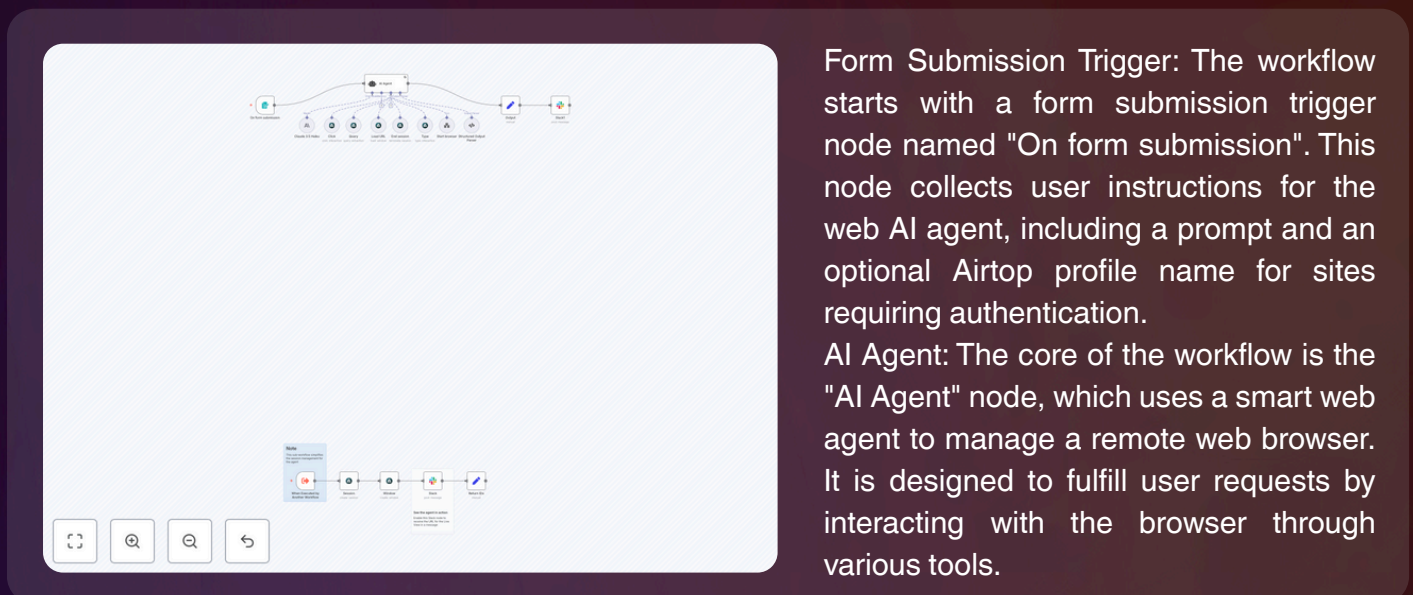

Build your own PostgreSQL MCP server

This n8n demonstrates how to build a simple PostgreSQL MCP server to manage your PostgreSQL database such as HR, Payroll, Sale, Inventory and More!

This MCP example is based off an official MCP reference implementation.

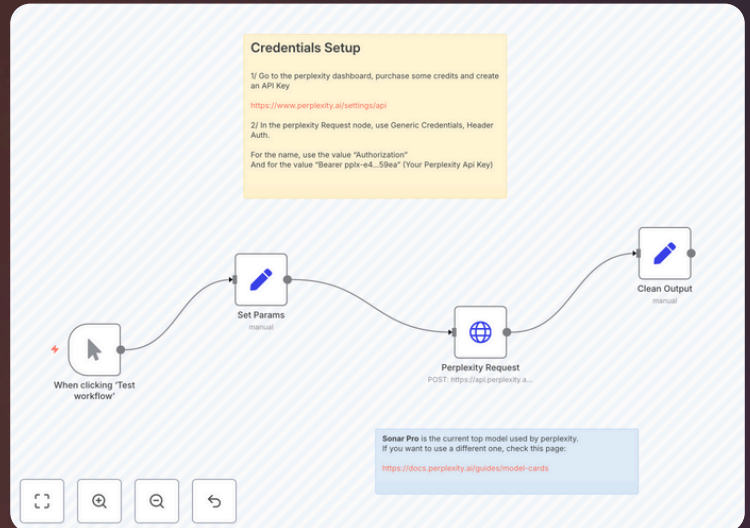

Automate Web Interactions with Claude 3.5 Haiku and Airtop Browser Agent

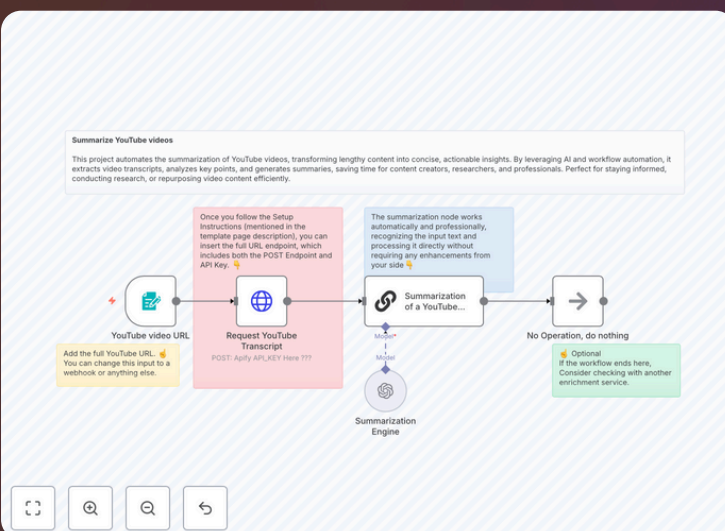

Query Perplexity AI from your n8n workflows

This workflow illustrates how to use Perplexity AI in your n8n workflow.

Perplexity is a free AI-powered answer engine that provides accurate, trusted, and real-time answers to any question.

Summarize YouTube Videos from Transcript

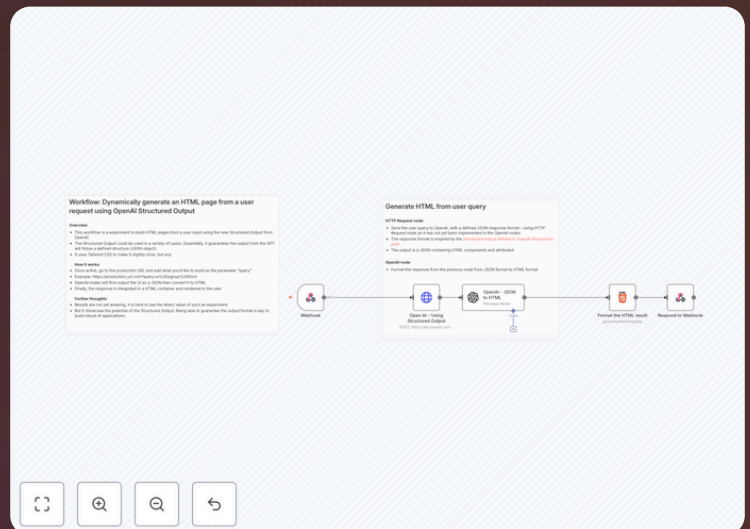

This workflow template is designed for content creators, researchers, educators, and professionals who need quick, accurate summaries of YouTube videos. It's ideal for those looking to save time, extract key insights, or repurpose video content into concise formats for reports, studies, or social media.

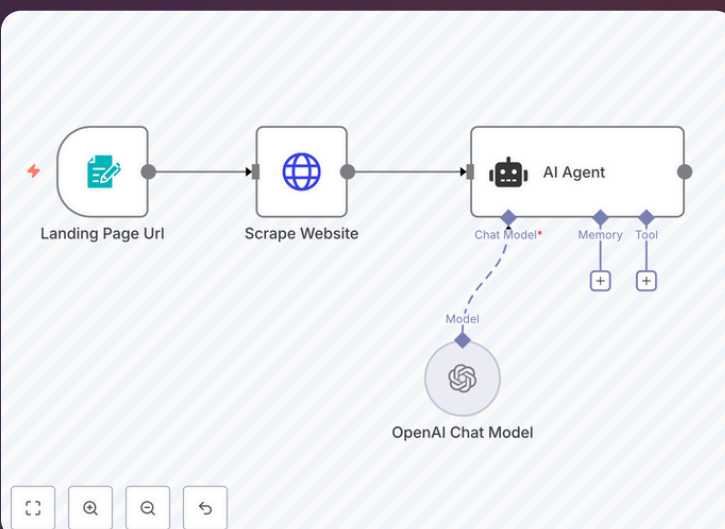

Dynamically generate a webpage from user request using OpenAI Structured Output

This workflow is a experiment to build HTML pages from a user input using the new Structured Output from OpenAI. How it works:

- Users add what they want to build as a query parameter
- The OpenAI node generate an interface following a structured output defined in the body
- The JSON output is then converted to HTML along with a title
- The HTML is encapsulated in an HTML node (where the Tailwind css script is added)
- The HTML is rendered to the user via the Webhook response.

Analyze Landing Page with OpenAI and Get Optimization Tips

Visitors land on your page. But instead of converting, they bounce.

Why? Something's broken. Something's missing. But what?

Is your CTA too weak?

Is your messaging unclear?

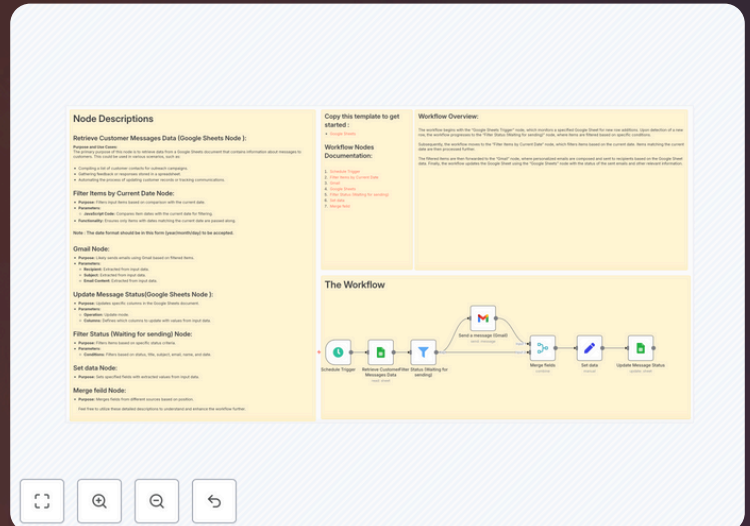

Is your design creating friction?

You know something is off, but don't know what. What if you could get an instant, expert-level report on exactly what to fix?

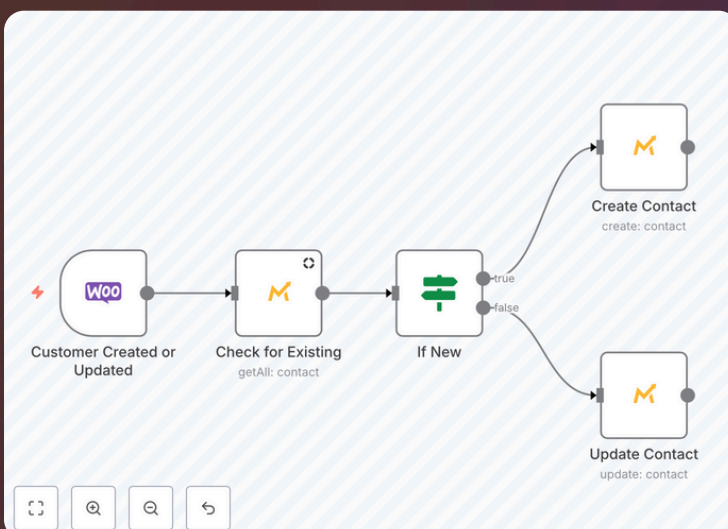

This workflow will do an AI Analysis of your landing page, provide a CRO Audit, so you can optimize your landing page.

Send multiple emails in Gmail directly via Google Sheets

In today's fast-paced digital world, businesses are constantly seeking ways to streamline their processes and enhance customer engagement. One powerful tool that facilitates these goals is n8n, an automation platform that allows users to create workflows to automate tasks and workflows.

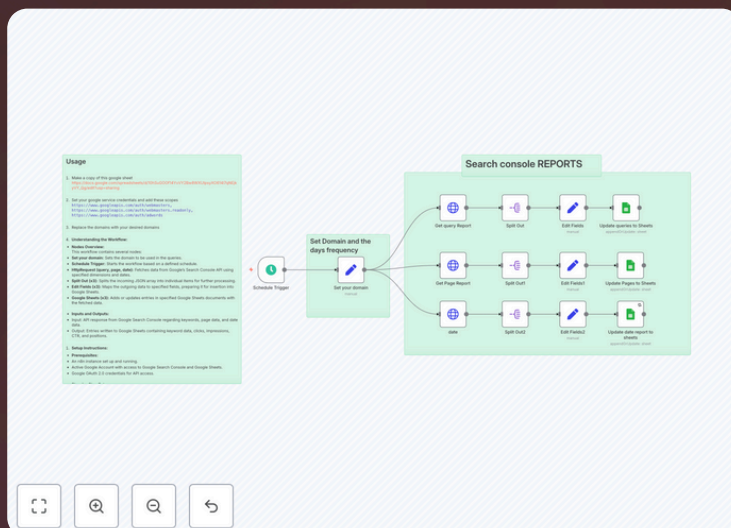

Add new customers from WooCommerce to Mautic

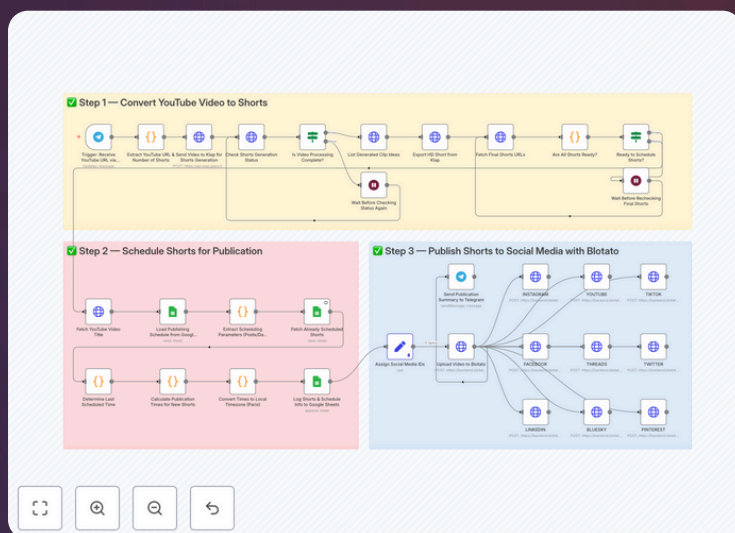

This workflow uses a WooCommerce trigger that will run when a new customer has been added, It will then add the customer to Mautic. To use this workflow you will need to set the credentials to use for the WooCommerce and Mautic nodes.

Export Search Console Results to Google Sheets

This workflow gets the search console results data and exports this to google sheets. This makes it easier to visualize and do other SEO related tasks and activities without having to log into Search Console.

Convert YouTube Videos to Shorts with Klap & Auto-Post to Multiple Social Platforms

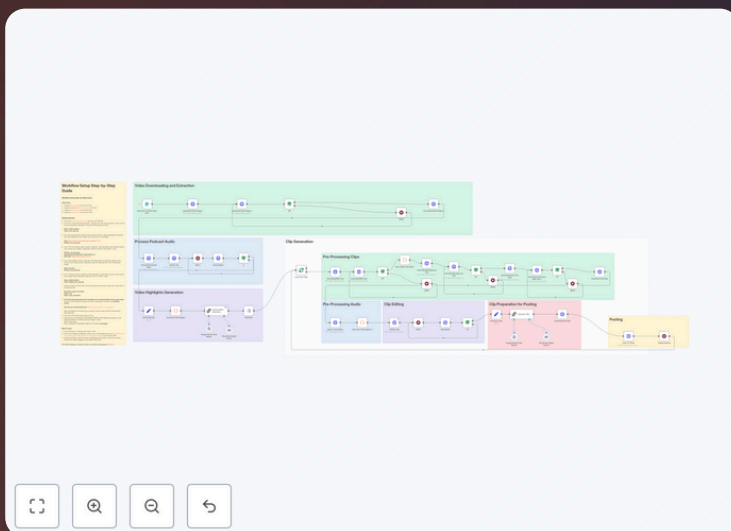

This workflow is perfect for content creators, YouTubers, marketing teams and entrepreneurs who want to effortlessly convert long YouTube videos into short, viral-ready clips and publish them automatically on TikTok, Instagram, YouTube Shorts and other platforms.

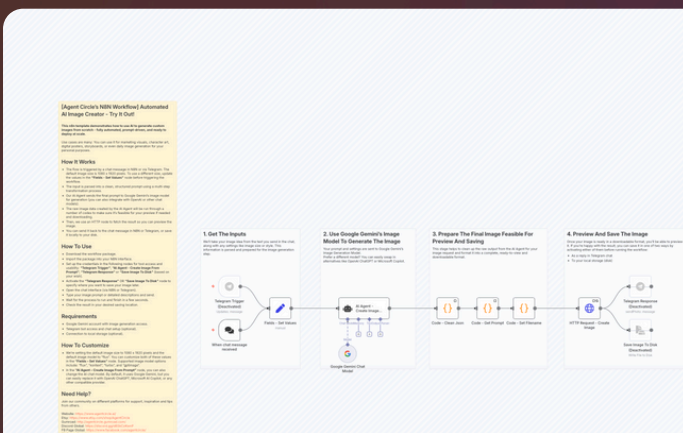

Transform Podcasts into Viral Youtube Shorts with Gemini+ Multi-Platform Posting

Effortlessly transform long-form podcast content into highly engaging, viral-ready clips with this end-to-end automation template.

Designed for content creators already monetizing on YouTube/Instagram/Twitter and those looking to start earning from the platform, this workflow streamlines the process of extracting highlights, editing clips, and posting to all your social media, allowing you to maximize reach while minimizing manual effort.

Free AI Image Generator - n8n Automation Workflow with Gemini/ChatGPT

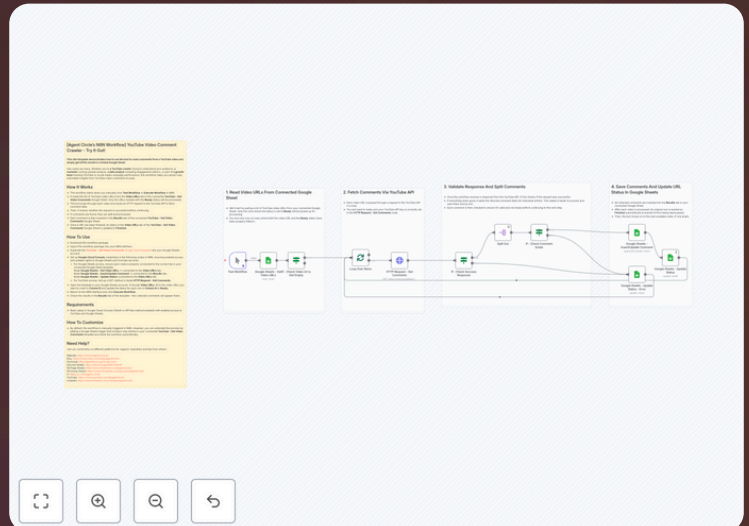

This n8n template demonstrates how to use AI to generate custom images from scratch - fully automated, prompt-driven, and ready to deploy at scale. Use cases are many: You can use it for marketing visuals, character art, digital posters, storyboards, or even daily image generation for your personal purposes.

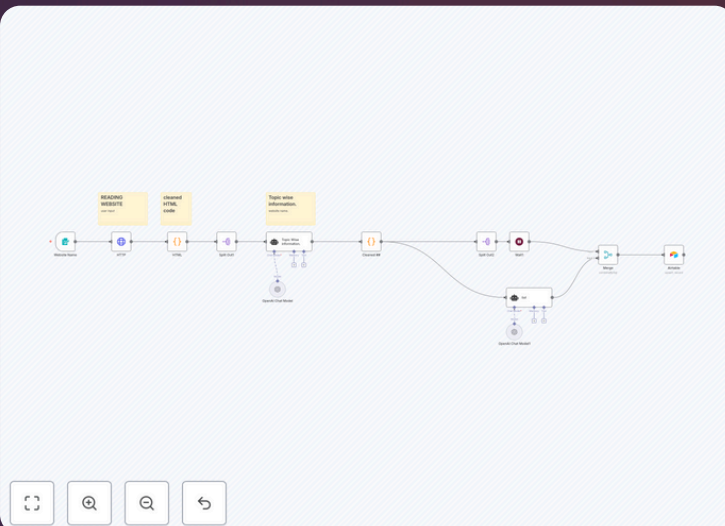

Extract and Store YouTube Video Comments in Google Sheets

This n8n template demonstrates how to use the tool to crawl comments from a YouTube video and simply get all the results in a linked Google Sheet.

Use cases are many: Whether you're a YouTube creator trying to understand your audience, a marketerrunning sample analysis, a data analyst compiling engagement metrics, or part of a growth teamtracking YouTube or social media campaign performance, this workflow helps you extract real, actionable insights from YouTube video comments at scale.

Website Content Scraper & SEO Keyword Extractor with GPT-4o-mini and Airtable

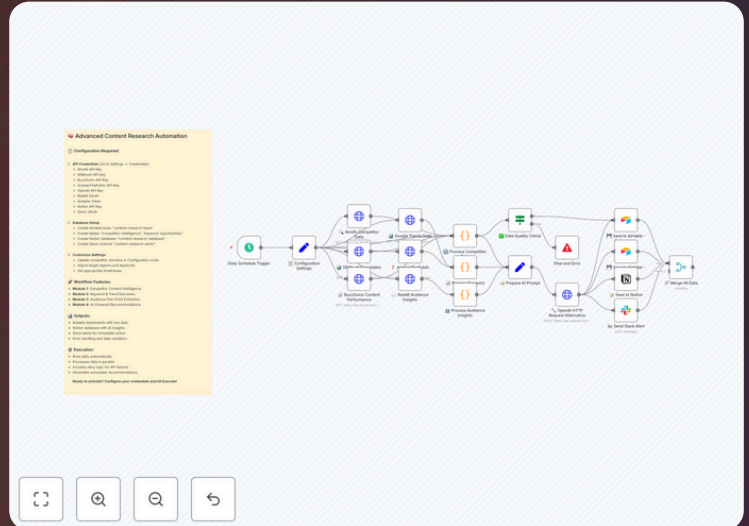

This workflow allows you to scrape website content, clean the HTML, extract structured information using GPT-4o-mini, and store the results along with SEO keywords into Airtable. Ideal for building keyword lists and organizing web content for SEO research.

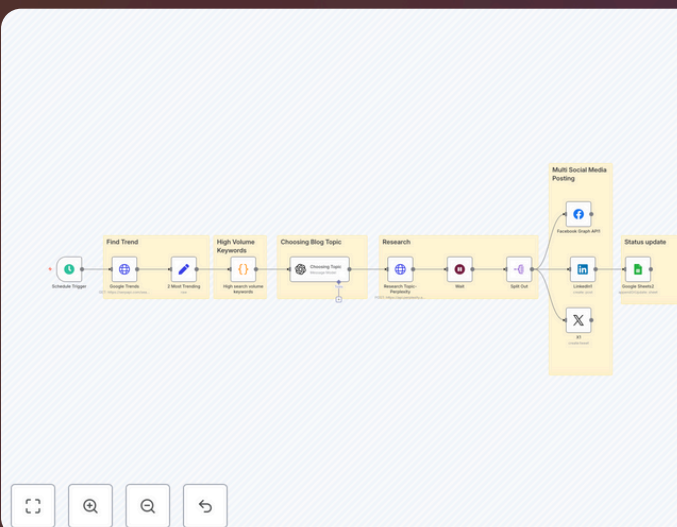

Automated Content Marketing Intelligence with OpenAI, Ahrefs & Multi-platform Integration

Never miss a competitor move again.
This workflow automatically:

- Monitors competitor content across multiple domains
- Tracks trending keywords by region
- Extracts audience pain points from Reddit & forums
- Generates AI strategy recommendations via OpenAI
- Outputs to Airtable, Notion & Slack for instant action

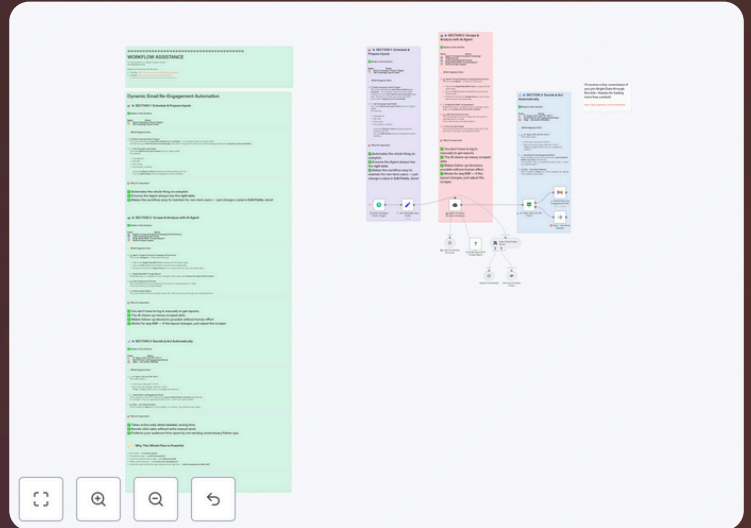

AI-Powered Multi-Social Media Post Automation: Google Trends & Perplexity AI

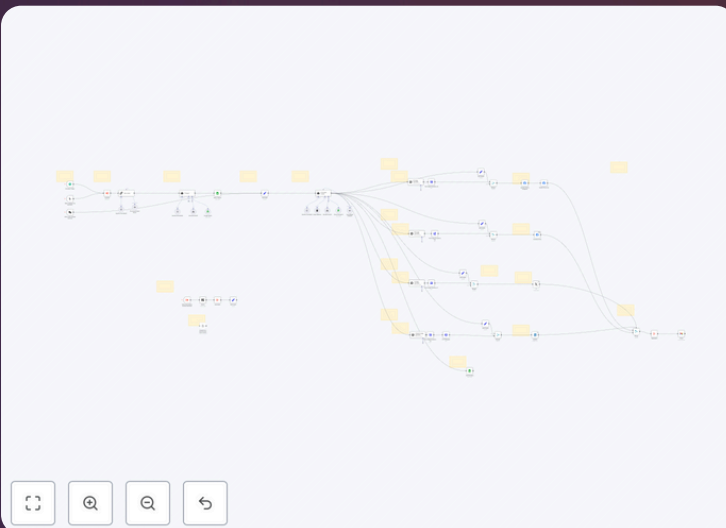

This comprehensive n8n workflow automatically transforms trending Google search queries into engaging LinkedIn posts using AI. The system runs autonomously, discovering viral topics, researching content, and publishing professionally formatted posts to grow your social media presence.

Automate Email Campaign Analysis & Smart Follow-ups with Bright Data & OpenAI

This workflow automatically tracks email campaign performance metrics and triggers smart follow-up actions based on engagement data. It saves you time by eliminating the need to manually monitor campaign reports and provides intelligent re-engagement strategies for improving email marketing ROI.

Automate Social Media Content with AI for Instagram, Facebook, LinkedIn & X

This workflow is built for creators, solopreneurs, SaaS founders, and agencies looking to automate their social media content process from idea to publication. It combines the power of OpenAI, Google Sheets, and official APIs for Instagram, Facebook, X (Twitter), and LinkedIn.

Automate Multi-Platform Social Media Content Creation with AI

What this workflow does

1. AI Content Generation:

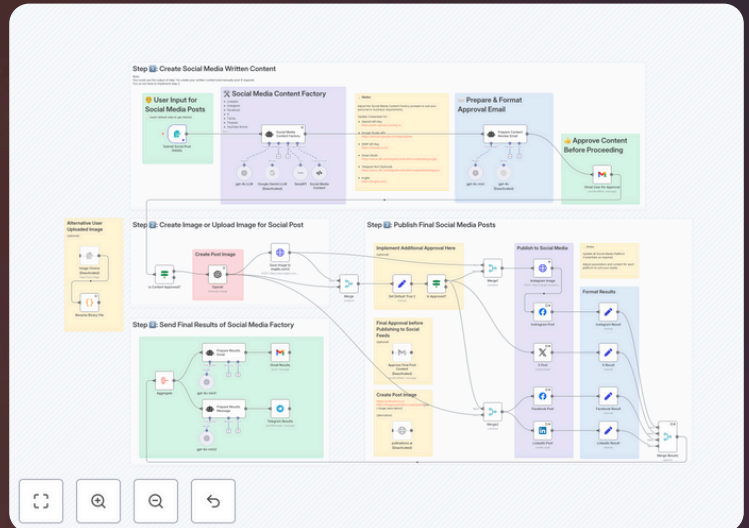

- Uses GPT-4/Gemini to create platform-specific posts
- Automatically generates hashtags, CTAs, and emoji placement
- Supports image/video suggestions and image creation using OpenAI or [Pollinations.ai](#)
- Uses SERP api to search for relevant content

2. Approval Workflow:

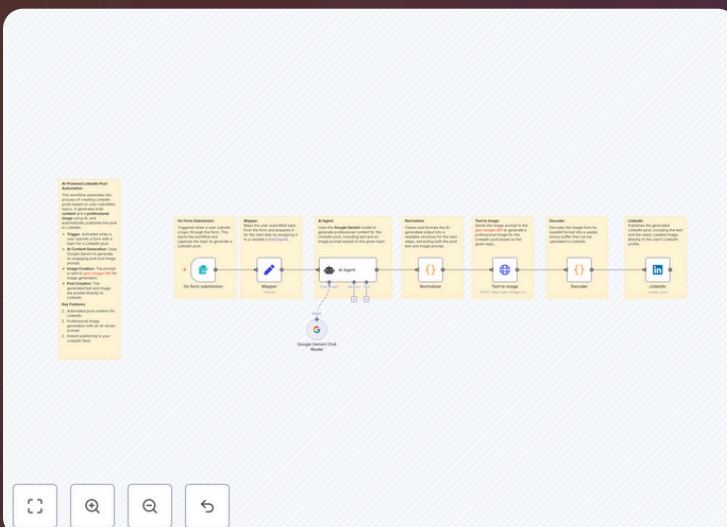

- Sends formatted HTML emails for human review
- Implements double-approval system with Gmail integration

3. Cross-Platform Publishing:

- One-click deployment to:
 - Instagram/Facebook (via Graph API)
 - X/Twitter (Official API)
 - LinkedIn (Sales Navigator integration)

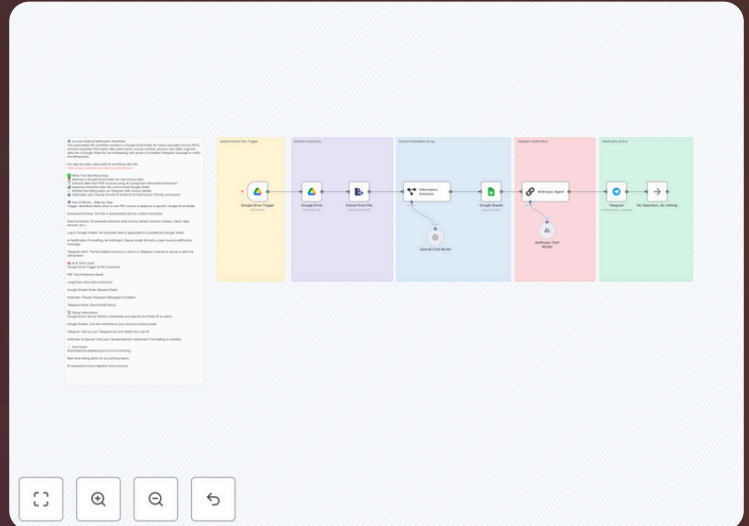

Generate AI-Powered LinkedIn Posts with Google Gemini and Gen-Imager

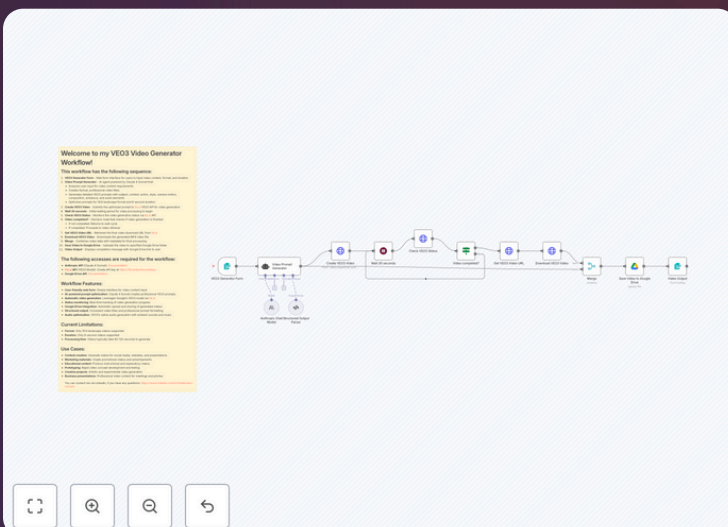

This workflow automatically generates LinkedIn posts based on a user-submitted topic, including both content creation and image generation, then publishes the post to LinkedIn. Ideal for marketers, content creators, or businesses looking to streamline their social media activity, without the need for manual post creation.

PDF Invoice Data Extraction & Tracking with Google Drive, Claude AI & Telegram

This automated n8n workflow monitors a Google Drive folder for newly uploaded invoice PDFs, extracts essential information (like client name, invoice number, amount, due date), logs the data into a Google Sheet for recordkeeping, and sends a formatted Telegram message to notify the billing team.

VEO3 Video Generator with AI Optimization and Google Drive Storage

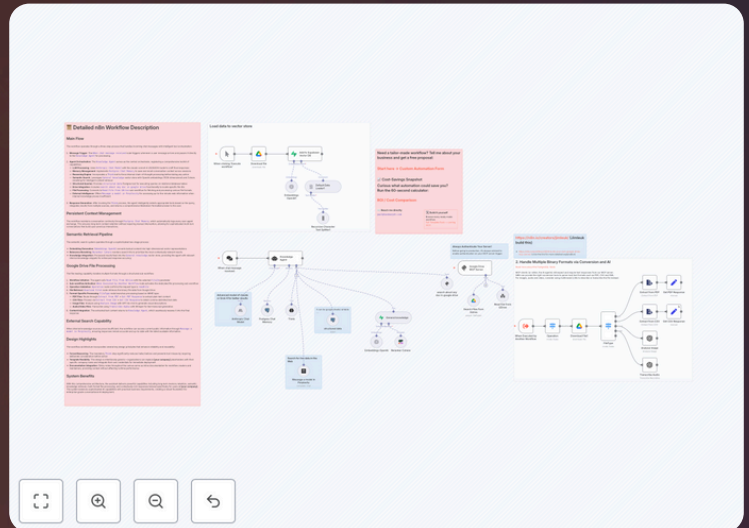

This automated workflow transforms simple text descriptions into professional 8-second videos using Google's cutting-edge VEO3 AI model. Users submit video ideas through a web form, and the system automatically generates optimized prompts, creates high-quality videos with native audio, and delivers them via Google Drive - all powered by Claude 4 Sonnet for intelligent prompt optimization.

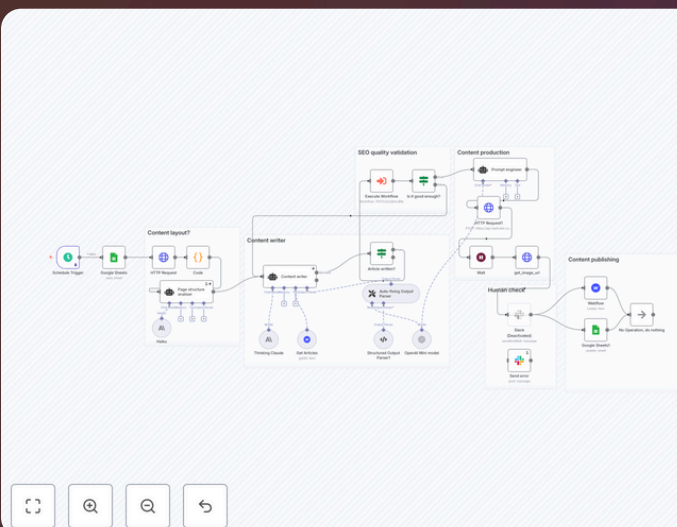

Build an All-Source Knowledge Assistant with Claude, RAG, Perplexity, and Drive

The workflow operates through a three-step process that handles incoming chat messages with intelligent tool orchestration:

1. **Message Trigger:** The When chat message received node triggers whenever a user message arrives and passes it directly to the Knowledge Agent for processing.
2. **Agent Orchestration:** The Knowledge Agent serves as the central orchestrator, registering a comprehensive toolkit of capabilities.

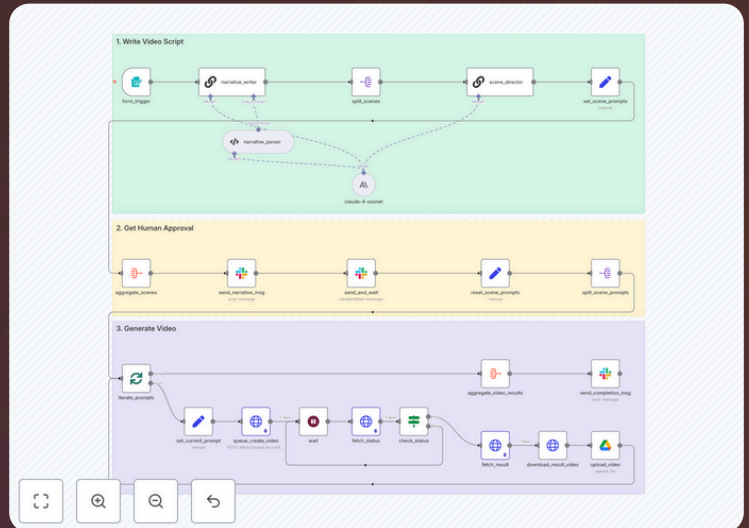

Generate & Publish SEO Articles with Claude AI, Webflow & Image Generation

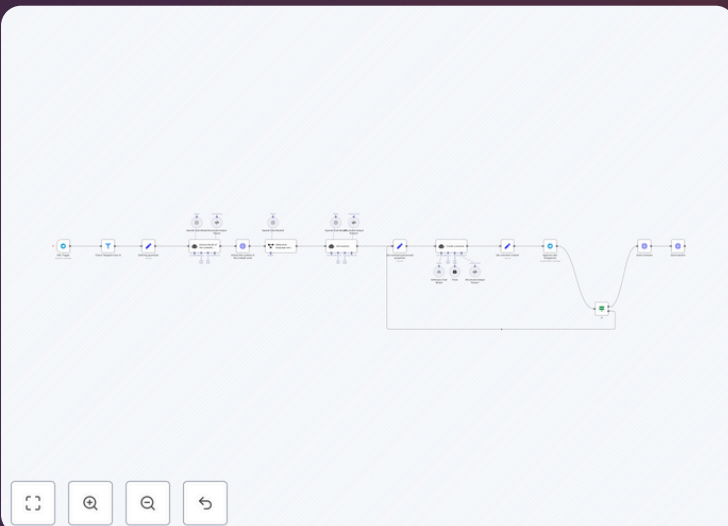

Purpose: Define content structure before writing begins.
What's Included: Search intent mapping, Internal link planning, Call-to-action (CTA) placement,
Benefit: Ensures consistency, SEO alignment, and content goals are baked in early.

Generate Viral Bigfoot Vlog Videos with Veo 3

Transform simple ideas into viral-ready Bigfoot vlogs! This automated workflow creates charming 8-scene video content featuring "Sam" the Bigfoot - a lovable, outdoorsy character inspired by popular YouTube adventure channels

LinkedIn Engagement Automator with GPT-4o/Claude, Human Review & Multilingual Comments

This workflow:

- Detects language & tone (German / English)

- Chooses the right reaction (like / celebrate / support ...)

- Generates a personalised comment in your voice and mentions the author

- Optional Telegram review – approve or regenerate before posting

- Runs on cost-efficient GPT-4o mini or Claude 3.5 Haiku

- Publishes comment + reaction via the Unipile API

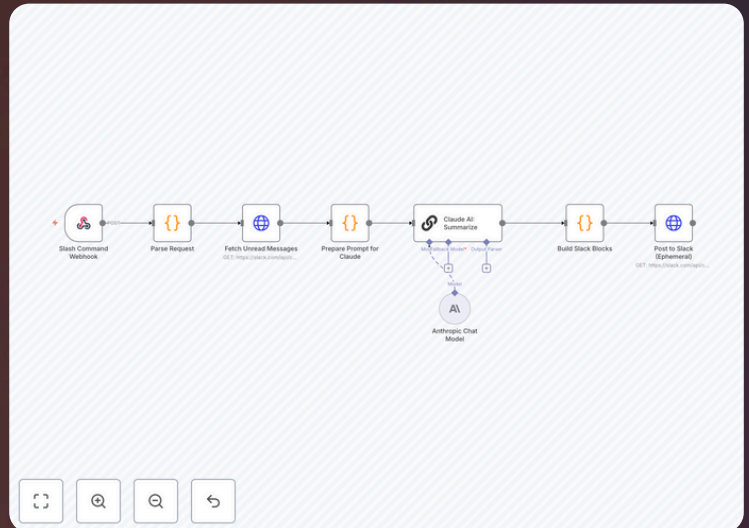

Summarize & Reply to Slack Channel Messages with Claude AI Assistant

Mello is a Claude-powered Slack assistant that helps you stay on top of unread messages across all your channels.

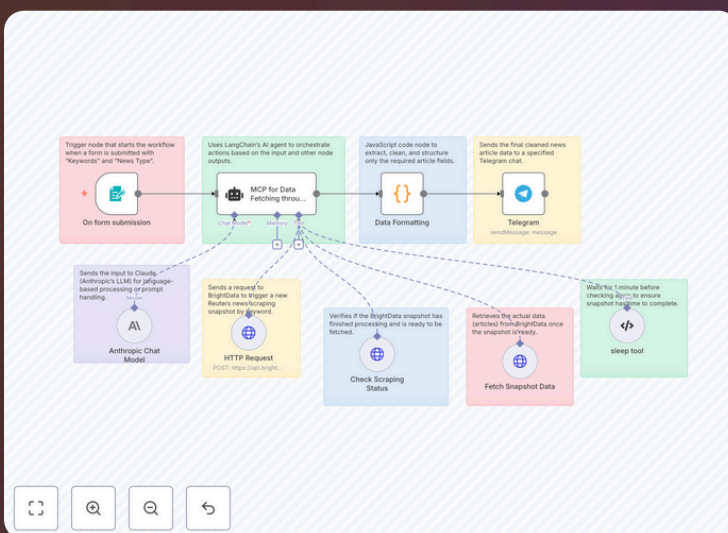

It:

- Summarizes conversations contextually using Claude AI.
- Generates reply suggestions and sends them as private (ephemeral) Slack messages.
- Lets you respond instantly with one-click AI-suggested replies.

Perfect for busy teams, founders, and anyone looking to reduce Slack noise and save hours each week.

Scrape Reuters News & Send AI Summaries with Brightdata, Claude 4 & Telegram

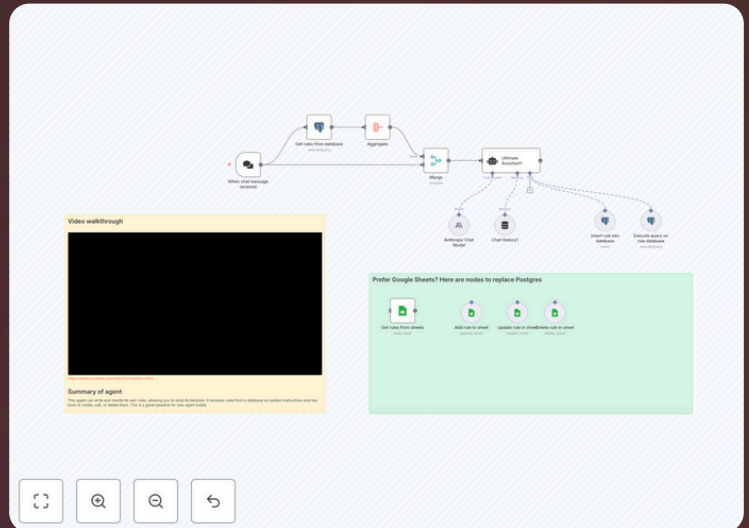

This workflow provides an automated news intelligence solution that monitors Reuters for breaking news, analyzes content using Claude AI, and delivers personalized news alerts. Perfect for journalists, researchers, traders, and anyone who needs real-time access to Reuters content with AI-powered insights.

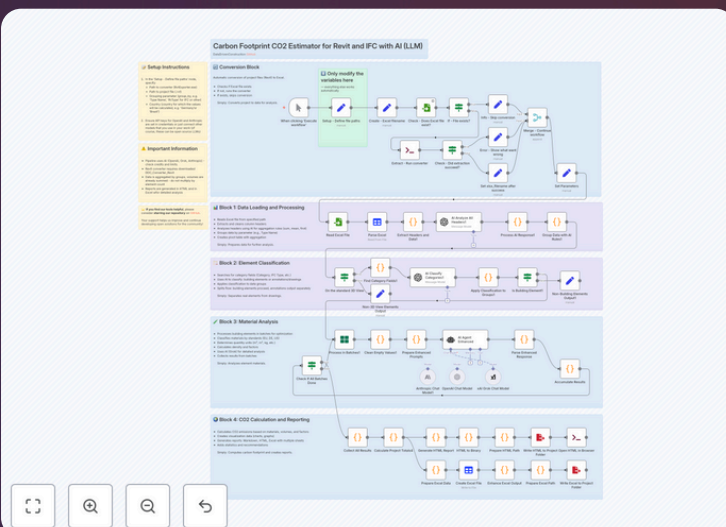

AI Agent that updates its own rules to modify behavior

This agent can write and rewrite its own rules, allowing you to mold its behavior. It receives rules from a database as system instructions and has tools to create, edit, or delete them. This is a great baseline for new agent builds.

You can tell it things like "Next time, use present tense when talking about this subject" and it will use a tool to save this as a rule, then receive that instruction in all future iterations.

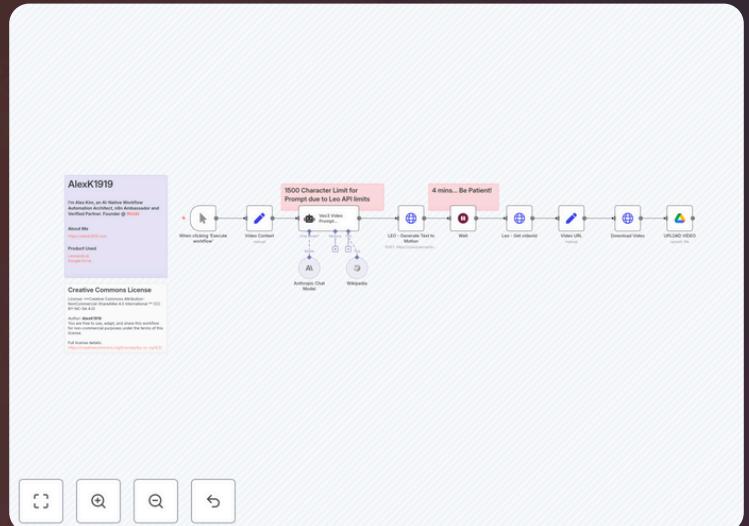

Calculate Embodied Carbon (CO2) for Revit/IFC Models using AI Classification

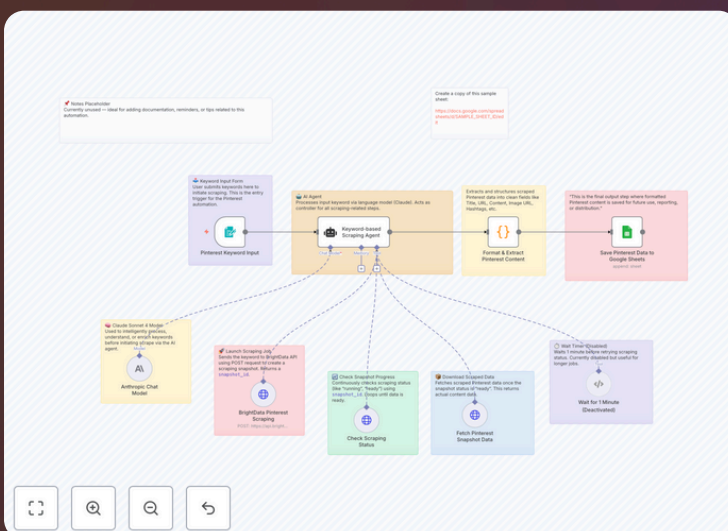

Estimate embodied carbon (CO₂e) for grouped BIM/CAD elements. The workflow accepts an existing XLSX (grouped element data) or, if missing, can trigger a local RvtExporter.exe to generate one. It detects category fields, filters out non-building elements, infers aggregation rules with AI, computes CO₂ using densities & emission factors, and exports a multi-sheet Excel plus a clean HTML report.

Transform Text into AI Videos with Google Veo3, Leonardo.ai and Claude 4

This advanced automation pipeline takes your creative ideas and turns them into professional-quality videos using Google's powerful Veo 3 model (accessed via [Leonardo.ai](#)), enhanced by Claude 4's sophisticated prompt engineering.

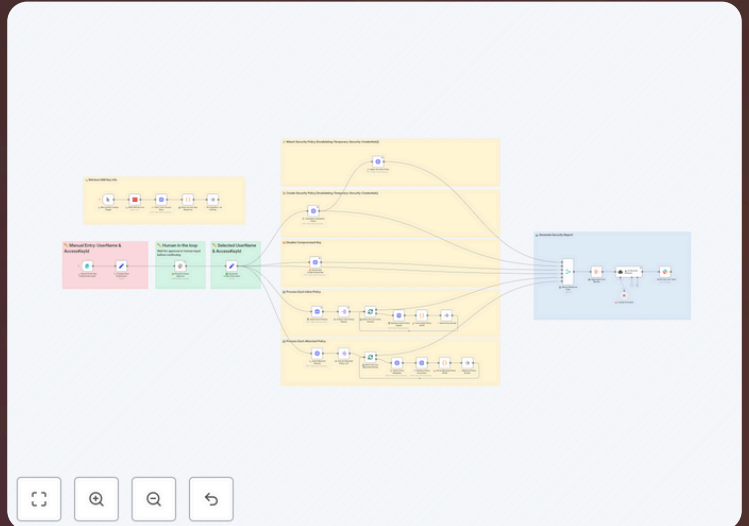

Pinterest Keyword-Based Content Scraper with AI Agent & BrightData Automation

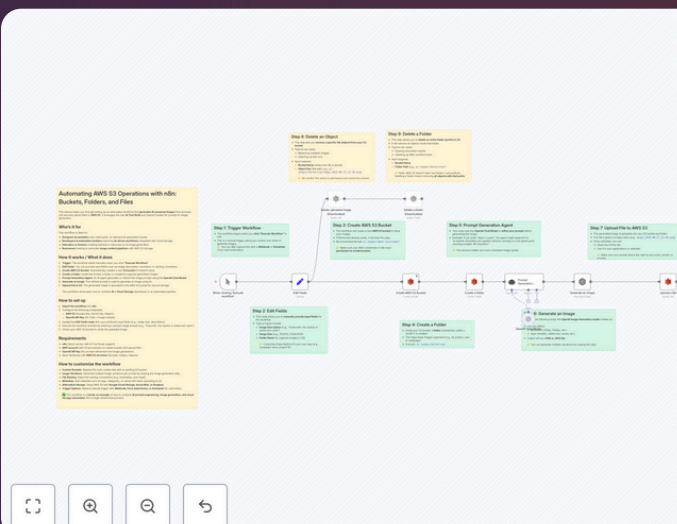

This n8n workflow automates Pinterest content scraping based on user-provided keywords using BrightData's API and Claude Sonnet 4 AI agent. The system intelligently processes keywords, initiates scraping jobs, monitors progress, and formats the extracted data into structured outputs.

Automated AWS IAM Key Compromise Response with Slack & Claude AI

This n8n workflow provides a secure, enterprise-grade response system for AWS IAM access key compromises with built-in form submission and human approval mechanisms. When an AWS access key is suspected to be compromised, this workflow enables rapid containment through a secure web form interface with basic authentication, human approval via Slack, and automated damage prevention through immediate key deactivation, credential invalidation, and comprehensive security reporting.

Store AI-Generated Images in AWS S3: OpenAI Image Creation & Cloud Storage

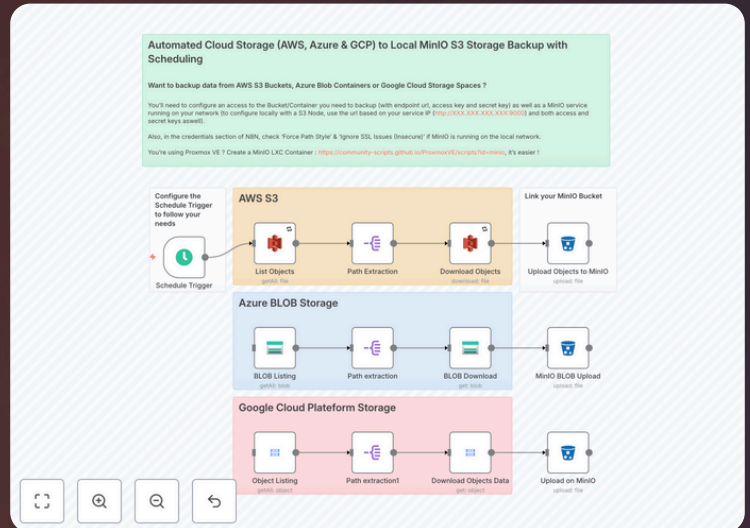

This workflow is ideal for:

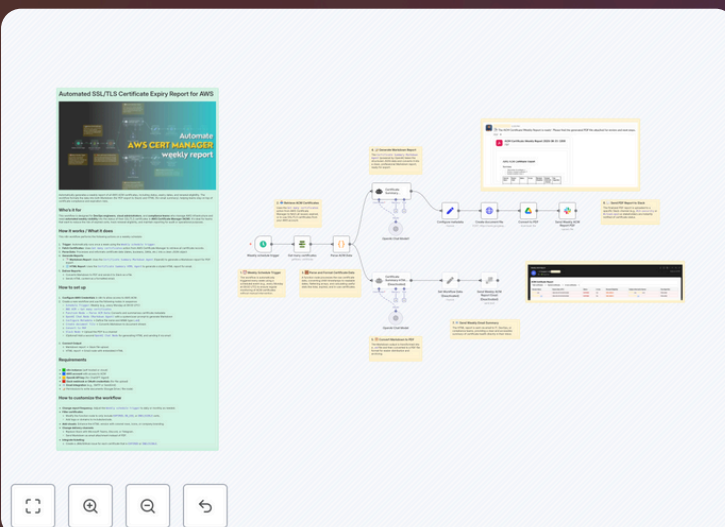

- Designers & marketers who need quick, on-demand AI-generated visuals.
- Developers & automation builders exploring AI-driven workflows integrated with cloud storage.
- Educators or trainers creating tutorials or exercises on AI image generation.
- Businesses looking to automate image content pipelines with AWS S3 storage.

Automated AWS S3 / Azure / Google to local MinIO Object Backup with Scheduling

This workflow performs automated, periodic backups of objects from an AWS S3 bucket, an Azure Container or a Google Storage Space to a MinIO S3 bucket running locally or on a dedicated container/VM/server. It can also work if the MinIO bucket is running on a remote cloud provider's infrastructure; you just need to change the URL and keys.

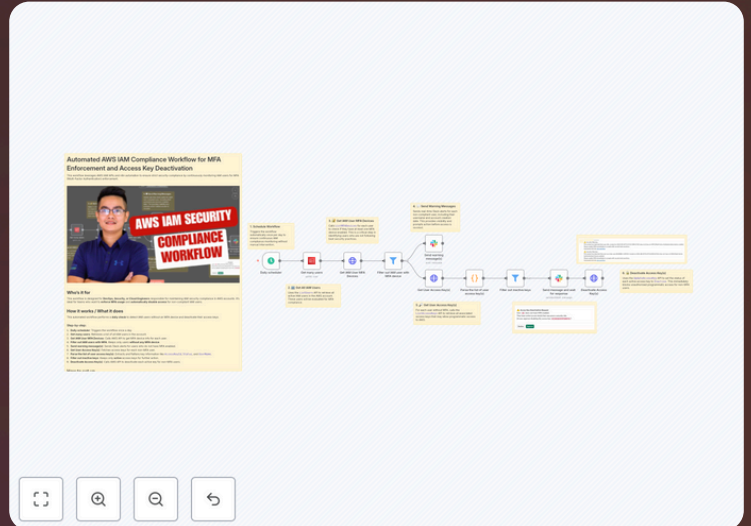

Generate SSL/TLS Certificate Expiry Reports with AWS ACM and AI for Slack & Email

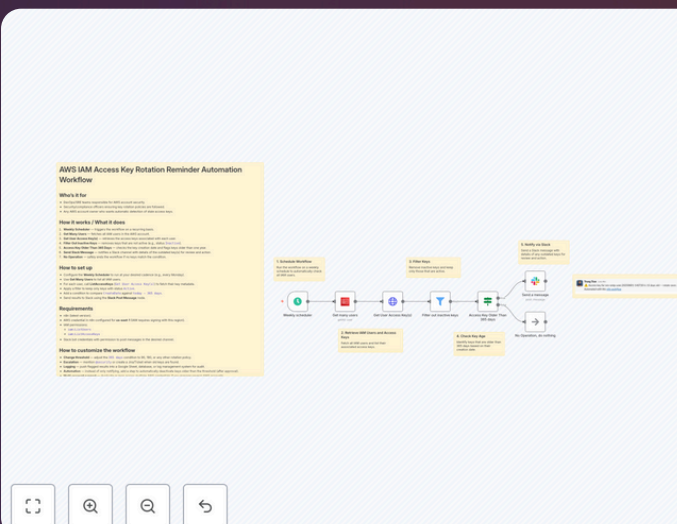

This workflow is designed for DevOps engineers, cloud administrators, and compliance teams who manage AWS infrastructure and need automated weekly visibility into the status of their SSL/TLS certificates in AWS Certificate Manager (ACM). It's ideal for teams that want to reduce the risk of expired certs, track renewal eligibility, and maintain reporting for audit or operational purposes.

IAM Compliance Automation: Enforce MFA and Clean Up Access Keys in AWS

This workflow is designed for DevOps, Security, or Cloud Engineers responsible for maintaining IAM security compliance in AWS accounts. It's ideal for teams who want to enforce MFA usage and automatically disable access for non-compliant IAM users.

Send Slack Alerts for AWS IAM Access Keys Older Than 365 Days

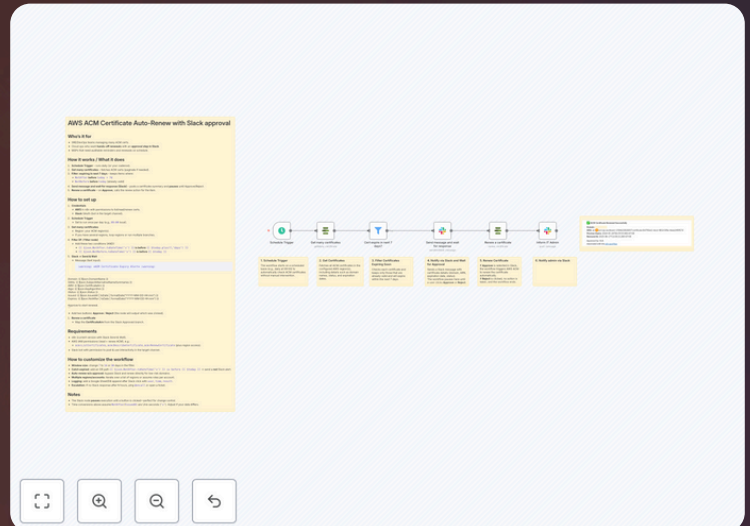

- This n8n workflow Weekly Scheduler — triggers the workflow on a recurring basis.
- Get Many Users — fetches all IAM users in the AWS account.
- Get User Access Key(s) — retrieves the access keys associated with each user.
- Filter Out Inactive Keys — removes keys that are not active (e.g., status Inactive).
- Access Key Older Than 365 Days — checks the key creation date and flags keys older than one year.
- Send Slack Message — notifies a Slack channel with details of the outdated key(s) for review and action.
- No Operation — safely ends the workflow if no keys match the condition.

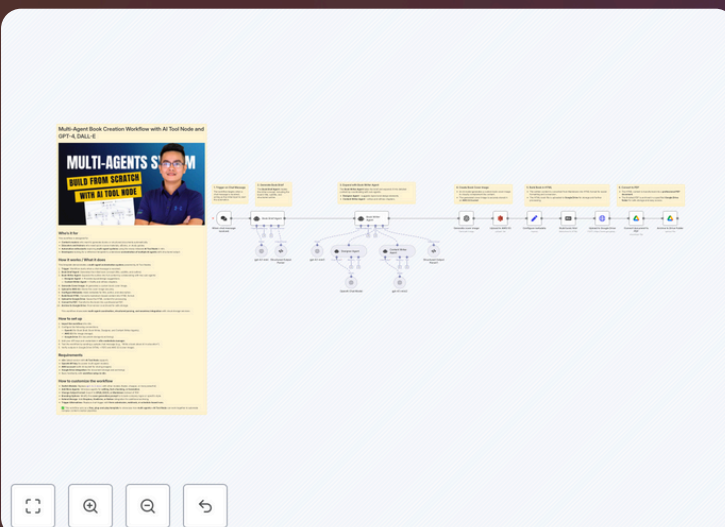

Auto-Renew AWS Certificates with Slack Approval Workflow

This workflow is for

- SRE/DevOps teams managing many ACM certs.
- Cloud ops who want hands-off renewals with an approval step in Slack.
- MSPs that need auditable reminders and renewals on schedule.

Create AI-Generated Books with GPT-4.1-mini, DALL-E, Google Drive and AWS S3

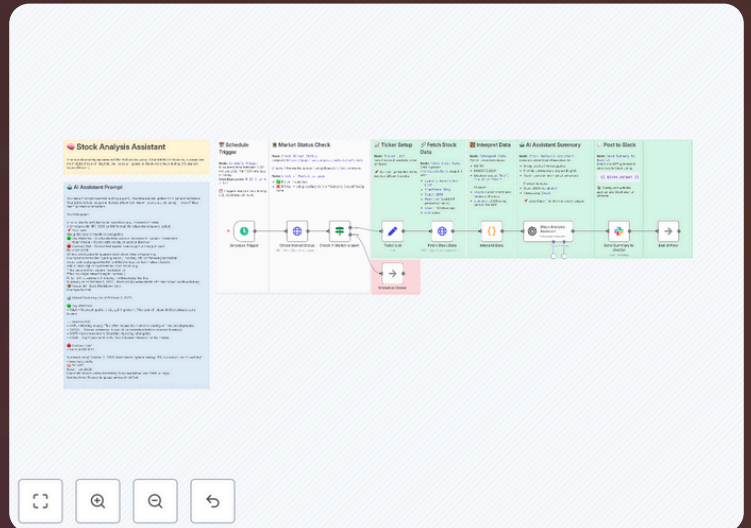

This workflow is designed for:

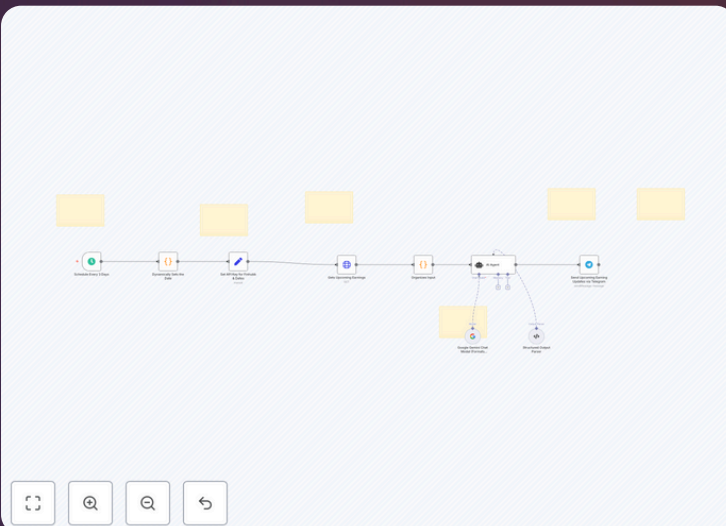

- Content creators who want to generate books or structured documents automatically.
- Educators and trainers who need quick course materials, eBooks, or study guides.
- Automation enthusiasts exploring multi-agent systems using the newly released AI Tool Node in n8n.

AI-Powered Stock Market Summary Bot

An automated n8n workflow that analyzes stocks using RSI and MACD, summarizes insights with OpenAI, and sends a Slack-ready market update every hour.

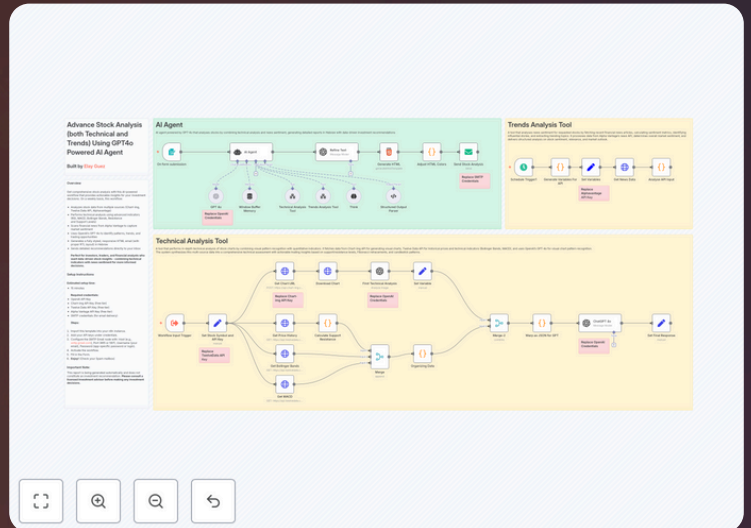

US Stocks Earnings Calendar AI Updates to Telegram (Finnhub + Gemini)

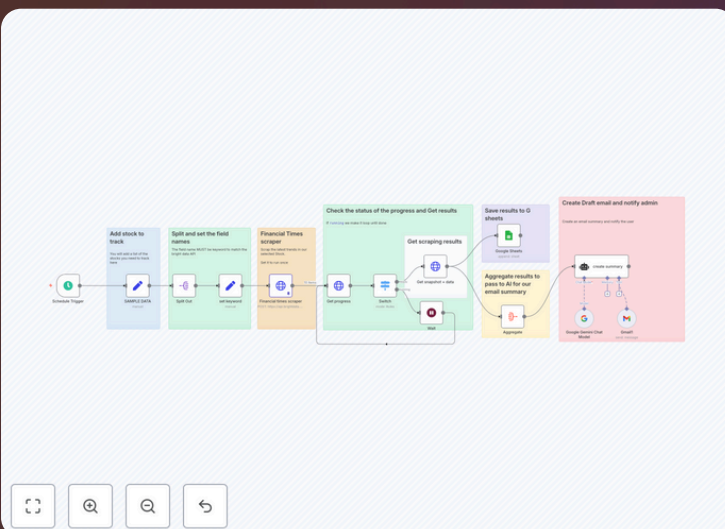

This n8n workflow is designed for investors, traders, financial analysts, and community managers who want real-time, structured US stocks upcoming earnings calendar updates directly to their Telegram channels or chats. It's perfect for anyone running a financial community, managing a trading group, or tracking earnings for personal investment decisions.

Automated Stock Analysis Reports with Technical & News Sentiment using GPT-4o

Get comprehensive stock analysis with this AI-powered workflow that provides actionable insights for your investment decisions. On a weekly basis, this workflow: Analyzes stock data from multiple sources (Chartimg, Twelve Data API, Alphavantage). Performs technical analysis using advanced indicators (RSI, MACD, Bollinger Bands, Resistance and Support Levels)

Stock Market Daily Digest with Bright Data Scraping & Gemini AI Email Reports

This workflow makes it easier to keep track of the stocks market and get an email with a summary of the daily highlights on what happened, key insights and trends
